PORTER, Commodore WILLIAM DAVID, an officer of the United States navy, born in New Orleans, La., in 1810, died of disease of the heart in New York City, May 1st, 1864. He was a son of Commodore David Porter, and elder brother of Adm. David D. Porter. He entered the service from Massachusetts, Jan. 1st, 1828, and was connected successively with the Franklin, Brandywine, Natchez, Experiment, United States, and Mississippi; and in 1848 was ordered to the home squadron. In 1849 he commanded the storeship Erie, and in 1851 was made commander of the Waterwitch. He projected and was the founder of the present light-house system, served through the Mexican war with distinction, and in 1855 was placed on a retired list by a secret Navy Board; four years later he was restored to his rank as commander by President Buchanan; was ordered to the United States sloop St. Mary's, and did important service on the Pacific coast. On the outbreak of the war he was ordered home, and though he had property in Virginia, and several of his family were in the rebel service, he proved faithful to the Government, and laying aside all personal considerations, tendered to it his aid, and was assigned to the superintendence of the building of the iron-clad Essex, at St. Louis, which he named after his father's ship. In the attack on Fort Henry he commanded the Essex, and during the engagement

was severely scalded by the steam issuing from the boiler, the thick plates of which had been penetrated by a ball. He also commanded the Essex at the attack on Fort Donelson, and fought his way in the same boat past all the batteries from Cairo to New Orleans. He caused the destruction of the ram Arkansas, above Baton Rouge, in Aug., 1862, and during the following month bombarded Natchez, attacked the Vicksburg batteries and Port Hudson. On the 16th of July, 1862, he was promoted from captain to commodore, after which he did but little active service, owing to an enfeebled state of health, which, as already stated, eventually resulted in heart-disease. Commodore Porter has two sons in the Confederate service.

POTTS, Rev. GEORGE, D.D., an American Presbyterian clergyman, born at Philadelphia in 1801, died in New York City, September 15, 1864. His father was a venerable Presbyterian clergyman of Philadelphia, who emigrated from Ireland to this country not far from the close of the last century. The subject of this sketch was fitted for college under some of the ablest teachers, entered the University of Pennsylvania at the age of fourteen, and graduated in 1819. After his graduation he spent a year in general studies, preparatory to entering upon his theological course. In 1820 he entered the Theological Seminary at Princeton, where he took the regular three years' course, and in 1823 became the pastor of a church in Natchez, Miss., where he remained nearly twelve years. Thence, in consequence of the enervating influence of a Southern climate, he removed to the North, and in May, 1836, became the pastor of the Duane Street Church, New York City. Upon the completion of the new edifice in University Place, he accepted a call from that church and continued its pastor until his death. His name was brought prominently before the public several years since by a controversy with the Rev. Dr. Wainwright, on the rites and discipline of the Episcopal Church. He was firm in his attachment to the doctrines and to the faith and order of his own Church, and while he promoted its own institutions with intelligence and zeal, he was of catholic spirit and ready to acknowledge the followers of Christ in every communion. During his whole ministry he was connected with various literary, religious, and benevolent institutions, in each of which he improved the opportunity of rendering important service to the varied interests of humanity, though his distaste for public demonstration led him to operate for the most part in a quiet way. He was a man of remarkably commanding and stately form, of graceful and dignified manners, and of great oratorical powers. His death was the result of an attack of paralysis.

PRESBYTERIANS. The General Assembly, known as the Old School Presbyterian, met at Newark, N. J., on May 19th, and organized by electing the Rev. Dr. Wood, President of Han-

over College, Indiana, Moderator. This Assembly, for the first time since the beginning of the war, had a thorough discussion of the slavery question. On Tuesday, May 24th, Judge Matthews, (under President Buchanan District Attorney of Ohio) presented a report from the Committee on Bills and Overtures, which gave a historical review of the action of former General Assemblies on the subject, and recommended the expression of a cordial approbation of the measures taken by the national and State authorities for its extirpation. After elaborate speeches by Judge Matthews, the Rev. Dr. Nevlin, Hon. Martin Ryerson, Rev. Dr. Rose, and others, the report was, on May 28th, adopted by a unanimous vote.

The Assembly showed itself very favorable to a union with the New School Presbyterians. A paper unanimously passed by the General Assembly of the latter body (see below) respecting this subject, was received and heartily concurred in. A report from the Committee on Memorials, expressing similar sentiments, was adopted, together with three resolutions to this effect: 1. That this Assembly has witnessed with satisfaction the happy influence of correspondence between the two bodies; 2. That it is not expedient at present to propose any additional measure; and 3. That fraternal intercourse be maintained between the two bodies.

A large number of ministerial and lay members of the Assembly formed an association to promote the union of the two bodies, and recommended to the synods, presbyteries, and congregations of the Church, a number of measures, by which they might promote the desire for a reunion and smooth the way for its consummation. With regard to foreign missions, it was resolved that \$300,000 be raised the coming year. The Executive Committee reported the receipts for 1864 to have been \$222,397.13; expenditures, \$221,609.98—leaving a balance in the treasury of \$788.20.

The Board of Domestic Missions have 452 missionaries serving in twenty-four States and territories. The receipts were \$82,684.29, being \$11,478.51 more than during the previous year. The report of the committee, which was adopted by the Assembly, recommended, among other resolutions, to carry the light and blessings of religion to the multitudes emancipated from slavery.

The interesting case of the complaint of Dr. S. B. McPheeters, against the Presbytery of St. Louis, for causing his preaching there to cease, was decided adversely to Dr. McPheeters. Although this case was said to stand upon its merits, imputations on the loyalty of the complainant were generally believed to have influenced the decision.

On March 10th, 1864, the following order was issued by the Secretary of War at the joint application of the Board of Domestic Missions and of the Presbyterian Committee of Home Missions:

WAR DEPARTMENT, ASSISTANT ADJUTANT GENERAL'S OFFICE, WASHINGTON, March 10th, 1864.

To the generals commanding the Military Division of the Mississippi and the Departments of the Gulf, of the South, and of Virginia and North Carolina, and all generals and officers commanding armies, detachments, and posts, and all officers in the service of the United States in the above-mentioned departments: The Board of Domestic Missions of the Presbyterian Church, and the Presbyterian Committee of Home Missions, enjoy the entire confidence of this Department, and no doubt is entertained that all ministers who may be appointed by them will be entirely loyal.

You are expected to permit such ministers of the gospel, bearing a commission of the "Board of Domestic Missions, or of the Presbyterian Committee of Home Missions" of the Presbyterian Church, who may convince you that their commissions are genuine, to exercise the functions of their office within your command, and to give them all the aid, countenance, and support which may be practicable, and in your judgment proper, in the execution of their important mission.

By order of the Secretary of War,

E. D. TOWNSEND,
Assistant Adjutant-General.

In August, a meeting of the Presbytery of Nashville, Tenn., was held, at which it was resolved to rescind a resolution passed in August, 1861, by which this Presbytery was formally transferred to the General Assembly of the Confederate States. This resolution leaves the Presbytery where it formerly was—in connection with the General Assembly of the Presbyterian Church in the United States.

In Kentucky the majority of the ministers and laymen of the presbyteries of the Old School Presbyterian Church assumed a decidedly hostile attitude toward the General Assembly, on account of the views of the latter body on the slavery and loyalty questions. The Louisville Presbytery, at its meeting at Owensburg, in April, severely censured the application from two boards of the Church to the Secretary of War, for a reoccupation of the Southern churches, by passing the following resolution:

Resolved, That in thus asking and accepting from the State, and more especially from the War Department, an indorsement of the commissions given to the ministers of Jesus Christ, sent to preach the gospel as missionaries of the church in connection with the Board of Domestic Missions, this board have transcended in an alarming degree the powers with which they are vested, as the agents of the Church, and have acknowledged such a subordination of the Church of Jesus Christ to the State, as is contrary to the constitution of the Presbyterian Church, contrary to the ancient testimonies of the faithful witnesses of the Church in all the past time, contrary to the whole teaching of the word of God. It is a practical surrender of the freedom of the commonwealth of Christ, and denial of the supremely authority of Messiah in his own kingdom.

The efforts made by some members of the Church to cause the secession of the Kentucky churches from the General Assembly, were, however, fruitless. The Synod of Kentucky, at its meeting, in August, adopted, the following action concerning the views of the General Assembly touching slavery:

The General Assembly, at different times, but especially in the years 1818 and 1845, set forth the

opinions and views of the Presbyterian Church of the United States on the subject of slavery. By these deliverances this Synod was willing and is still willing to abide, and any further or different utterance on that subject by the last General Assembly was, in the judgment of this Synod, unnecessary, unwise, and untimely—unnecessary, because the former deliverances were sufficiently expressive of the views of the Church, and had been acquiesced in with great unanimity for many years; unwise, because the whole country was excited upon the subject of slavery, and the means adopted by the President of the United States for its destruction, in regard to which there was great division of sentiment in the public mind; and the Assembly could not take any action on the subject without at least seeming to cast its influence with the one or the other political parties which divided the country. Moreover, the minute of the Assembly was peculiarly liable to this interpretation, because in the latter part of it some of its expressions may be misunderstood, and others may be taken in the sense of a political, if not partisan statement.

The action of the Assembly was untimely, because times of high political excitement are not proper occasions for ecclesiastical courts to express opinions upon the topics which constitute the party issues of the day. The mission of the Church of Christ is spiritual, and any interference with matters purely political is a departure from her duty, and without the pale of her authority as conferred upon her by her Divine head.

The New School Presbyterian General Assembly met at Dayton, Ohio, on May 19, and elected Rev. Thomas Brainerd, D.D., of Philadelphia, Moderator. On May 29th the Assembly unanimously adopted the following paper:

1. That this Assembly cordially welcomes all signs of increased love and union among those who hold to the same facts and doctrines of the gospel, and bears its solemn testimony with self-humiliation against whatever fosters alienation and genders strife among the disciples of our Lord.

2. That the tendencies of modern society, the condition of Protestant Christianity, the increase of infidelity, the progress of Romanism, and the present and prospective state of our country, afford powerful arguments against further subdivision, and in favor of that union and unity of the Church into which it is to grow, and which is to be its consummation; and that we record with unfeigned gratitude our profound conviction that the spirit of disunion and of sectarianism is waning, and that the spirit of brotherly kindness and mutual confidence is largely on the increase.

3. That in an especial manner are those churches bound to foster this spirit who adopt the same standards of faith and order, and whose decisions are local, personal, and incidental, and for whose reunion there is only needed a wise deference to each other's rights, and a higher measure of Christian charity. Adopting the same formulas of faith and form of government, all that is needed is to receive them in the same spirit. That it is our united and fervent prayer to our common Master, that he would so remove all hindrances, or to make a plain path for our feet wherein we may walk together, being of one heart and mind in the ways of the Lord.

4. That as the churches represented by this Assembly did not inaugurate separation, so too they would hold to no principles and views, and would impose no terms inconsistent with a full and cordial reunion, whenever and wherever the great Head of the Church, as indicated by Divine Providence, may open the way for us all to meet together again on the same basis on which of old our fathers stood, and that we should rejoice in such reunion.

5. That while we do not deem it expedient now to

appoint such a committee as that asked for in the memorial of the St. Lawrence Presbytery, yet that this expression of our principles and convictions with our heartfelt Christian salutations, be transmitted to the General Assembly of the Presbyterian Church now in session in Newark, New Jersey.

The report and recommendations were unanimously adopted. The reading of this paper called out an enthusiastic response of "Amen" and applause.

The Committee on the State of the Country reported the following resolutions, which were unanimously adopted:

Resolved, 1. That this General Assembly reaffirms the principles and reveres the declarations of previous General Assemblies, so far as applicable to the present aspect of public affairs.

Resolved, 2. That we recognize clearly the good hand of God in all the victories of the national arms, whereby the limits of the rebellion have been contracted, and its vitality impaired; and we look humbly and confidently to the same Divine source for further success, until the cause of the nation shall be vindicated and peace established on the grave of treason.

Resolved, 3. That we also recognize the same good hand of God in the delays and disappointments of the war, by which he has made more sure and complete the destruction of the vile system of human bondage, and rendered less self-confident and more religious the heart of the nation.

Resolved, 4. That in such recognition and hope we do by no means lose sight of our national and individual sins, which render us so utterly unworthy of the Divine favor, but confess them with penitent hearts, and trust to a covenant God in Christ Jesus, that this unworthiness will not hinder the might of God's grace in behalf of the cause of right and order.

Resolved, 5. That we exhort all our churches to renewed zeal and faithfulness in supplication to God for the deliverance of the land, and prosperity of Christ's kingdom, through the blessings of national peace and fraternity.

Resolved, 6. That we cordially uphold the Government with our sympathies and prayers in its energetic efforts for the suppression of this most causeless and cruel rebellion, urge all Christians to refrain from weakening the authority of the administration by ill-timed complaints and unnecessary criticisms, fully believing that in such a crisis all speech and action which tend to differences should be sedulously avoided for the sake of the common weal.

Resolved, 7. That a copy of these resolutions duly authenticated be sent to the President of the United States by special committee.

The contributions of the churches to foreign missions during the last year were \$80,000; only 629 churches out of 1,464 gave any thing to this cause. For home mission about \$70,000 were contributed, an advance of \$20,000 over the previous year.

A considerable portion of those Presbyterians of East Tennessee who formerly belonged to the New School Presbyterian Church, and reluctantly in 1857 yielded to the secession movements inaugurated by their ministers, returned, in 1864, to their former church connection. At a meeting of Union Presbytery, which was held in July, in Knox County, and which was attended by three ministers and twelve elders, the following resolutions were passed:

Whereas, Presbytery is convinced that its interests are not likely to be promoted by a continuance of its

connection with the United Synod of the Presbyterian Church.

Resolved, 1. That the connection of this Presbytery with said Synod be, and the same is now hereby dissolved.

Resolved, 2. That this Presbytery, at the kind solicitation and request of that General Assembly of the Presbyterian Church from which it withdrew in 1857, presented through Rev. J. W. Elliott, does now return to the body.

The Cumberland Presbyterian General Assembly met on May 19th, at Lebanon, Ohio, and had, like the Old School General Assembly, an animated discussion on the questions of loyalty and slavery. A committee of nine, to which some overtures respecting slavery had been referred, reported the following two resolutions.

Resolved, 1. That we regard the holding of human beings in involuntary slavery, as practised in some of the States of the American Union, as contrary to the precepts of our holy religion, and as being the fruitful source of many evils and vices in the social system.

Resolved, 2. That it be recommended to the Cumberland Presbyterians, both North and South, to give countenance and support to all constitutional efforts of our Government to rid the country of that enormous evil.

The Assembly appeared at first to hesitate respecting the adoption of these resolutions, and, on motion of Mr. Bird, of Kentucky—a man of great influence in the Church—it was resolved by thirty against twenty-eight votes, to refer the resolutions to the presbyteries. On the next day, however, two members from Missouri and two from Tennessee wished to change their votes. Some members of the majority, when they saw that the resolutions of the preceding day would be reversed, left the meeting, and finally the anti-slavery resolutions originally reported by the committee were almost unanimously adopted.

The Cumberland Presbyterians of the seceded States appear to be the only one, among the larger religious denominations of the South, which has not succeeded in organizing an independent Southern Church. Conventions for that purpose have been in turn called at Chattanooga, at Selma, and at Dalton, Georgia, but they have either not met at all, or have been unable to achieve anything. It is stated, on what appears to be good authority, that a large number of the Southern Cumberland Presbyterians have remained loyal to their former church connection.

The sixth annual meeting of the United Presbyterian General Assembly assembled at Philadelphia, on May 25th, and elected the Rev. D. A. Wallace, D.D., of Monmouth, Illinois, Moderator. Strong loyal and anti-slavery resolutions were unanimously adopted; also reports in behalf of the missions among the freedmen.

The United Presbyterian Church of North America is composed of 7 synods, 46 presbyteries, 371 settled pastors, 142 ministers without charges, making 513 ministers, 47 licentiate, and 54 students of theology, making a total of ministers and those in preparation for the min-

istry of 614. There are 25,410 families, 57,691 members, with an increase during the year, by examination and profession, of 2,610, and by certificate of 2,541, and a decrease by death of 1,128, and by removal of 3,266. The Presbytery of Sealkote during the year received 18 new members not included in the above. There were baptized during the year 3,698 infants and 267 adults. Contributions to home missions, \$15,495; foreign missions, \$28,611; education, \$1,538; publication, \$1,564; church extension, \$4,887; Assembly's fund, \$595; Synod's funds, \$3,018; salaries of pastors paid by congregations, \$207,859, and by the Assembly, \$12,404; money paid for general purposes, \$143,631; making a total of \$398,075, being an average of \$6.91 for each member of the Church.

They have three theological seminaries located respectively at Alleghany City, Pa.; Xenia, Ohio; and Monmouth, Ill. Foreign mission stations at Savanna Grande, Trinidad, West Indies; Damascus, Syria; Cairo and Alexandria, Egypt; Canton, China; Sienna, Italy. There are six boards for carrying on the operations of the Church—foreign missions, located at Philadelphia, Pa.; home missions, the executive committee at Xenia, Ohio; publication, at Pittsburgh, Pa.; church extension, at Alleghany City, Pa.; education, at Monmouth, Ill.; and freedmen's mission at Alleghany City, Pa.

The General Assembly of the Presbyterian Church of the Confederate States, which embraces the seceders from the Old School Presbyterian Church of the United States, met on May 5th at Charlotte, North Carolina, and elected Rev. John S. Wilson, D.D., of Georgia, Moderator. One of the most important topics discussed by this body was that of a union between the different Presbyterian bodies of the South. The last year it seemed as if all these bodies were anxious to consummate the union as soon as possible; but the proceedings of the General Assembly showed that there was by no means a unanimity with regard to this subject, and, in particular, the union with the Southern New School Presbyterians (the United Synod) was very strongly objected to by several presbyteries of the Old School brethren. A majority declared themselves, however, in favor of re-union, which was accordingly consummated in the course of the year. The United Synod met for the last time at Lynchburg, the only business transacted being the consummation of the plan of union.

The Presbytery of New Orleans, at the beginning of 1864, held a meeting, at which it was resolved that the Presbytery separate from the General Assembly of the Confederate States, and declare itself an independent body.

The union between the Old and New School Presbyterians of the United States, made considerable progress in the course of the year. During the session of the Old School Presbyterian General Assembly at Newark, a meeting of ministerial and lay delegates of that body was held, at which the following measures as

conducive to the success of the movement, were recommended to the churches of both denominations.

By way of ascertaining the views of the ministers, ruling elders, and churches, and of calling out, organizing, and concentrating public sentiment, so as to open the way for organic union as speedily as possible, they proposed the following measures:

1. We recommend to Presbyteries and Synods the appointment of corresponding delegates to attend the Presbyteries and Synods of the other branch, as a measure adapted to develop and promote the spirit of union.

2. We recommend union meetings of Presbyteries and Synods—of the two bodies wherever practicable—such as were held by the Presbyteries of St. Lawrence and Ogdensburg, as furnishing the best means of ascertaining how far a spirit of kindness and confidence has been restored, and to what extent a desire for reunion prevails.

3. We recommend that Church Sessions, Presbyteries, and Synods, that are in favor of reunion, take action on the subject, and express and publish their views.

4. We recommend conventions of the friends of reunion at important points, to be composed of ministers, ruling elders, and others, to consult together and to declare their views.

5. We respectfully request the conductors of the religious journals of the two churches to open their columns to the publication of communications and reports of church courts and other meetings, in favor of reunion.

6. We would recommend to all concerned to discourage the organization of weak churches of the two branches where only one is needed and can be supported, and especially where missionary aid is required to sustain them, and we commend the union of such churches where they exist.

7. We recommend, in the language of the General Assembly of 1863, at Peoria, "That the ministers of the two branches of the Church cultivate fraternal intercourse, the free interchange of views, and in all suitable ways encourage and aid one another in the appropriate work of the ministry; and that the members of the one or the other branch connect themselves with existing congregations of either, rather than give their influence and their aid with bodies whose principles and form of government are foreign to their own."

In accordance with this recommendation, many synods of both bodies arranged to meet next year simultaneously, and at the same place, for the purpose of promoting, if not effecting, a formal union.

The principal business before the synods of the two largest Presbyterian Churches of Scotland, the Free Church and the United Presbyterians, was the overture for a union of the two bodies.

The committee appointed by the United Presbyterian Church, to confer with the committee of the Free Church, presented a lengthy report setting forth the matters in respect to which the committees were agreed, and also the points on which they differed, as regards "the relation of the civil magistrate to religion and the Church." It was resolved unanimously that the Synod express great satisfaction at the Christian courtesy which had distinguished the conferences, and its unabated sense of the importance of the object, and, without giving any opinion on the articles in the report, reappoint the com-

mittee to continue the conferences. The Moderator expressed his confidence in the ultimate result.

At the meeting of the Free Church Assembly at Edinburgh, Dr. Buchanan, convener of the Committee on Union, laid on the table the report of that committee. The report begun with a statement of the distinctive principles on which the committees of the Free and United Presbyterian churches differ, and detailed the proceedings of the Reformed, United Presbyterian, and Original Secession Synods on the questions. After reading the various communications from these bodies, Dr. Buchanan explained the purport and supported the object of the report in a speech of some length. Dr. Candlish moved the reappointment of the committee under the former instructions. Dr. Julius Wood made a counter motion, to the general effect that in view of the differences and difficulties that beset the question of union, the committee should be directed rather to seek to promote harmonious coöperation among, than to bring about union between the churches. After several members of the Assembly had spoken on both sides, the discussion was adjourned to the evening session. It was then resumed by Professor Gibson, and continued for four hours, when, in deference to the general feeling of the house, Dr. Wood withdrew his motion, and that of Dr. Candlish was unanimously adopted. The chief obstacle to a consummation of the union of the two bodies is the difference of their views respecting the relations of the Church to the State.

PRISONERS, EXCHANGE OF. The statements of the number of prisoners exchanged by each party in the war are quite conflicting, and in the absence of the official documents of either, which are withheld from publication, and which, perhaps, would not agree in details, it is difficult to arrive at a satisfactory conclusion. The report of the Commissary General of prisoners, which accompanied Secretary Stanton's report at the close of 1863, stated that 121,387 of the enemy as prisoners had been exchanged against 110,866 Union prisoners; and that 29,229 still remained in Federal prisons. On the other hand the statistics kept by the clerk of Libby prison, at Richmond, showed that from the first of January, 1864, to Dec. 19th, 31,630 Federal prisoners had passed the doors of that prison. This number is independent of twenty thousand captured at Spottsylvania and elsewhere in Virginia, and sent directly South. The statistics of the same prison make the number of those who have passed its doors and departed as prisoners of war since the commencement of hostilities at 225,000.

Of the points in dispute between the authorities on each side and which caused temporary suspensions of the exchange, the most serious related to the negro prisoners. The position taken by the Government at Richmond was that the Federal Government had the right to enlist or draft, or procure in any other manner

free negroes whose residence was at the North, to become soldiers. It would have a perfect right, they said, to make war upon them with elephants, or wild cattle, or dogs, and equally so to employ negroes as soldiers. But it was denied at Richmond that the Federal Government had the right to take a man's negro and arm him against his master; and asserted that his master, wherever he may find that stolen or runaway negro, is entitled to reclaim him. The Federal Government regarded itself bound to protect those in whose hands they had put arms in its defence without respect to their previous condition. It objected to exchange white for white, as the enemy would thereby not only be relieved of the burden of maintaining the white troops, but they would get back their men and retain in their power the negroes without fear of retaliation.

A voluminous correspondence took place between the Commissioners of Exchange relative to the slaves. Maj.-Gen. Butler, then acting as Commissioner, contended that the slaves were such no longer, and that the Government of the United States was bound in honor and good faith to accord to them the same protection that it threw around all other soldiers. The position of the Richmond authorities, which he sought to combat, was that slaves were property, and that property recaptured from an enemy in war reverts to its owner, if he can be found, or may be disposed of by its captor in any way he sees proper. On this ground the distinction made between soldiers who had been slaves, and others, was sought to be justified.

This dispute was thus founded on principles which each party held to be fundamental, and yet were directly opposite. If the Federal Government yielded its assent to this doctrine, it would be an abandonment of the proclamation of emancipation, a breach of faith toward those men it has made free and accepted as soldiers in its service, and a direct recognition of the principle of property in man. On the other hand, if the Richmond authorities recognized the right of those fugitives from bondage to freedom, it would be an abandonment of the position for which they had been so long contending, and knock the corner-stone from under the whole fabric of slavery. The excess of prisoners finally became so large in the Federal hands, that the question upon which it was impossible to agree was temporarily waived.

Another difficulty which existed early in the year, and at the close of the previous one, was a charge that the Federal Government departed from the original agreement. This cartel provided that all prisoners should be exchanged, and the balance on either side to be considered on parole. Exchanges under the cartel were stopped by the Federal Government on the ground that paroled rebel prisoners were put into the ranks again before accounts were balanced and their exchange regularly declared. The words of the cartel were as follows:

All prisoners of war are to be discharged on parole

in ten days after their capture, and the prisoners now held, and those hereafter taken, to be transported to the points mutually agreed upon, at the expense of the capturing party. The surplus, not exchanged, shall not be permitted to take up arms again, nor to serve as military police, or constabulary force in any fort, garrison, or field-work, held by either of the respective parties, nor as guards of prisoners, depots, or stores, nor to discharge any duty usually performed by soldiers, until exchanged under the provisions of this cartel. The exchange is not to be considered complete until the officer or soldier exchanged for has been actually restored to the lines to which he belongs.

Each party, upon the discharge of prisoners of the other party, is authorized to discharge an equal number of their own officers or men from parole, furnishing at the same time to the other party a list of their prisoners discharged, and of their own officers and men relieved from parole; thus enabling each party to relieve from parole such of their own officers and men as the party may choose. The lists thus mutually furnished will keep both parties advised of the true condition of the exchange of prisoners.

From the date of the cartel until July, 1863, the enemy had an excess of prisoners. The Federal authorities after that date declared the cartel had been violated by the release from parole of the Vicksburg prisoners, and refused to proceed. They then proposed to exchange officer for officer and man for man. This was refused by the other side on the ground that it was a departure from the cartel, and the exchange was suspended for some time on this ground. At length on August 10th the Confederate Commissioner accepted these terms, "in view of the very large number of prisoners now held by each party and the suffering consequent upon their consequent confinement." The exchange, however, was not at that time resumed, as the question of slave soldiers was still under discussion.

This general suspension of an exchange and the rapid accumulation of prisoners became an additional cause of irritation to both parties. In the Federal hands there were between 60,000 and 70,000, and nearly as many in Confederate prisons. To the enemy there was an additional grievance arising from this detention. Their supply of men was limited; they needed every one for service in the field. In addition a large force was necessarily withdrawn from the field to guard the prisoners. Statements of great cruelty to Federal prisoners were now published and verified. Among them was the following appeal to the President, made by officers in confinement at Charleston:

CONFEDERATE STATES PRISON,
CHARLESTON, S. C., August —, 1864. }

To the President of the United States:

The condition of the enlisted men belonging to the Union armies, now prisoners to the Confederate rebel forces, is such that it becomes our duty, and the duty of every commissioned officer, to make known the facts in the case to the Government of the United States, and to use every honorable effort to secure a general exchange of prisoners, thereby relieving thousands of our comrades from the horrors now surrounding them.

For some time past there has been a concentration of prisoners from all parts of the rebel territory to the State of Georgia—the commissioned officers being confined at Macon, and the enlisted men at Andersonville. Recent movements of the Union armies

under General Sherman have compelled the removal of prisoners to other points, and it is now understood that they will be removed to Savannah, Georgia, Columbus and Charleston, South Carolina. But no change of this kind holds out any prospect of relief to our poor men. Indeed, as the localities selected are far more unhealthy, there must be an increase rather than a diminution of suffering. Colonel Hill, Provost Marshal General, Confederate States Army, at Atlanta, stated to one of the undersigned that there were thirty-five thousand prisoners at Andersonville, and by all accounts from the United States soldiers who have been confined there the number is not overstated by him. These thirty-five thousand are confined in a field of some thirty acres, enclosed by a board fence, heavily guarded. About one-third have various kinds of indifferent shelter; but upwards of thirty thousand are wholly without shelter, or even shade, of any kind, and are exposed to the storms and rains, which are of almost daily occurrence; the cold dews of the night, and the more terrible effects of the sun striking with almost tropical fierceness upon their unprotected heads. This mass of men jostle and crowd each other up and down the limits of their enclosure, in storm or sun, and others lie down upon the pitiless earth at night, with no other covering than the clothing upon their backs, few of them having even a blanket.

Upon entering the prison every man is deliberately stripped of money and other property, and as no clothing or blankets are ever supplied to their prisoners by the rebel authorities the condition of the apparel of the soldiers, just from an active campaign, can be easily imagined. Thousands are without pants or coats, and hundreds without even a pair of drawers to cover their nakedness.

To these men, as indeed to all prisoners, there is issued three-quarters of a pound of bread or meal, and one-eighth of a pound of meat per day. This is the entire ration, and upon it the prisoner must live or die. The meal is often unsifted and sour, and the meat such as in the North is consigned to the soap-maker. Such are the rations upon which Union soldiers are fed by the rebel authorities, and by which they are barely holding on to life. But to starvation and exposure, to sun and storm, add the sickness which prevails to a most alarming and terrible extent. On an average one hundred die daily. It is impossible that any Union soldier should know all the facts pertaining to this terrible mortality, as they are not paraded by the rebel authorities. Such statements as the following, made by ———, speaking eloquent testimony. Said he:—"Of twelve of us who were captured, six died; four are in the hospital, and I never expect see them again. There are but two of us left." In 1862, at Montgomery, Alabama, under far more favorable circumstances, the prisoners being protected by sheds, from one hundred and fifty two hundred were sick from diarrhoea and chills, out of seven hundred. The same percentage would give seven thousand sick at Andersonville. It needs no comment, no efforts at word painting, to make such a picture stand out boldly in most horrible colors.

Nor is this all. Among the ill-fated of the many who have suffered amputation in consequence of injuries received before capture, sent from rebel hospitals before their wounds were healed, there are eloquent witnesses of the barbarities of which they are victims. If to these facts is added this, that nothing more demoralizes soldiers and develops the evil passions of man than starvation, the terrible condition of Union prisoners at Andersonville can be readily imagined. They are fast losing hope, and becoming utterly reckless of life. Numbers, crazed by their sufferings, wander about in a state of idiocy; others deliberately cross the "dead line," and are remorselessly shot down.

In behalf of these men we most earnestly appeal to the President of the United States. Few of them have been captured except in the front of battle, in

the deadly encounter, and only when overpowered by numbers. They constitute as gallant a portion of our armies as carry our banners anywhere. If released, they would soon return to again do vigorous battle for our cause. We are told that the only obstacle in way of exchange is the status of enlisted negroes captured from our armies, the United States claiming that the cartel covers all who serve under its flag, and the Confederate States refusing to consider the colored soldiers, heretofore slaves, as prisoners of war.

We beg leave to suggest some facts bearing upon the question of exchange, which we would urge upon your consideration. Is it not consistent with the national honor, without waiving the claim that the negro soldiers shall be treated as prisoners of war, to effect an exchange of the white soldiers? The two classes are treated differently by the enemy. The whites are confined in such prisons as Libby and Andersonville, starved and treated with a barbarism unknown to civilized nations. The blacks, on the contrary, are seldom imprisoned. They are distributed among the citizens, or employed on government works. Under these circumstances they receive enough to eat and are worked no harder than they have been accustomed to be. They are neither starved nor killed off by the pestilence in the dungeons of Richmond and Charleston. It is true they are again made slaves, but their slavery is freedom and happiness compared with the cruel existence imposed upon our gallant men. They are not bereft of hope, as are the white soldiers, dying by piecemeal. Their chances of escape are tenfold greater than those of the white soldiers, and their condition, in all its lights, is tolerable in comparison with that of the prisoners of war now languishing in the dens and pens of secession.

While, therefore, believing the claims of our Government, in matters of exchange, to be just, we are profoundly impressed with the conviction that the circumstances of the two classes of soldiers are so widely different that the Government can honorably consent to an exchange, waiving for a time the established principle justly claimed to be applicable in the case. Let thirty-five thousand suffering, starving, and dying enlisted men aid this appeal. By prompt and decided action in their behalf thirty-five thousand heroes will be made happy. For the eighteen hundred commissioned officers now prisoners we urge nothing. Although desirous of returning to our duty, we can bear imprisonment with more fortitude if the enlisted men, whose sufferings we know to be intolerable, were restored to liberty and life.

The exposure to artillery fire of officers who were prisoners was resorted to on two or three occasions as acts of retaliation, but it quickly led to explanations, and no injuries were the result. Arrangements were made by each party on the approach of winter, to furnish their soldiers with blankets and other absolute necessities. Articles for Federal prisoners were sent to City Point from the North, and distributed as directed by agents of the rebels to prisoners in their hands. At the same time a thousand bales of cotton were shipped from Mobile to New York and sold. With the money thus obtained, blankets and other necessities were provided for the rebel prisoners in Federal prisons. A contribution was also made up in England, and sent over for Confederate prisoners; but permission to deliver it was refused. (*See GREAT BRITAIN.*)

In November an exchange was resumed beginning first with the invalids and the sick, and carried forward very rapidly, on the basis of man for man, and officer for officer.

PUBLIC DOCUMENTS. *Message of President LINCOLN at the second session of the Thirty-eighth Congress, December 6th, 1864.*

Fellow-citizens of the Senate and House of Representatives:

Again the blessings of health and abundant harvests claim our profoundest gratitude to Almighty God.

The condition of our foreign affairs is reasonably satisfactory.

Mexico continues to be a theatre of civil war. While our political relations with that country have undergone no change, we have, at the same time, strictly maintained neutrality between the two belligerents.

At the request of the States of Costa Rica and Nicaragua, a competent engineer has been authorized to make a survey of the river San Juan and the port of San Juan. It is a source of much satisfaction that the difficulties which for a moment excited some political apprehensions, and caused a closing of the inter-oceanic transit route, have been amicably adjusted, and that there is a good prospect that the route will soon be reopened with an increase of capacity and adaptation. We could not exaggerate either the commercial or the political importance of that great improvement.

It would be doing injustice to an important South American State not to acknowledge the directness, frankness, and cordiality with which the United States of Colombia have entered into intimate relations with this Government. A claims convention has been constituted to complete the unfinished work of the one which closed its session in 1861.

The new liberal constitution of Venezuela having gone into effect with the universal acquiescence of the people, the Government under it has been recognized, and diplomatic intercourse with it has opened in a cordial and friendly spirit. The long deferred Aves Island claim has been satisfactorily paid and discharged.

Matual payments have been made of the claims of the late joint commission for the settlement of claims between the United States and Peru. An earnest and cordial friendship continues to exist between the two countries, and such efforts as were in my power have been used to remove misunderstanding and avert a threatened war between Peru and Spain.

Our relations are of the most friendly nature with Chili, the Argentine Republic, Bolivia, Costa Rica, Paraguay, San Salvador, and Hayti.

During the past year no differences of any kind have arisen with any of those republics, and, on the other hand, their sympathies with the United States are constantly expressed with cordiality and earnestness.

The claim arising from the seizure of the cargo of the brig Macedonian in 1821, has been paid in full by the Government of Chili.

Civil war continues in the Spanish part of San Domingo, apparently without prospect of an early close.

Official correspondence has been freely opened with Liberia, and it gives us a pleasing view of social and political progress in that Republic. It may be expected to derive a new vigor from American influence, improved by the rapid disappearance of slavery in the United States.

I solicit your authority to furnish to the Republic a gunboat at moderate cost, to be reimbursed to the United States by instalments. Such a vessel is needed for the safety of that State against the native African races; and in Liberian hands it would be more effective in arresting the African slave trade than a squadron in our own hands. The possession of the least organized naval force would stimulate a generous ambition in the Republic, and the confidence which we should manifest by furnishing it

would win forbearance and favor toward the colony from all civilized nations.

The proposed overland telegraph between America and Europe, by the way of Behring's Straits and Asiatic Russia, which was sanctioned by Congress at the last session, has been undertaken under very favorable circumstances, by an association of American citizens, with the cordial good-will and support as well of this Government as those of Great Britain and Russia. Assurances have been received from most of the South American States of their high appreciation of the enterprise, and their readiness to coöperate in constructing lines tributary to that world-encircling communication. I learn, with much satisfaction, that the noble design of a telegraph communication between the eastern coast of America and Great Britain has been renewed with full expectation of its early accomplishment. Thus it is hoped that with the return of domestic peace the country will be able to resume with energy and advantage its former high career of commerce and civilization.

Our very popular and estimable representative in Egypt died in April last. An unpleasant altercation which arose between the temporary incumbent of the office and the Government of the Pacha resulted in a suspension of intercourse. The evil was promptly corrected on the arrival of the successor in the consulate, and our relations with the Barbary powers are entirely satisfactory.

The rebellion which has so long been flagrant in China has at last been suppressed, with the coöperating good offices of this Government and of the other western commercial States. The judicial consular establishment there has become very difficult and onerous, and it will need legislative revision to adapt it to the extension of our commerce, and to the more intimate intercourse which has been instituted with the Government and people of that vast empire. China seems to be accepting with hearty good will the conventional laws which regulate commercial and social intercourse among the western nations.

Owing to the peculiar situation of Japan, and the anomalous forms of its Government, the action of that empire in performing treaty stipulations is inconsistent and capricious. Nevertheless, good progress has been effected by the Western Powers, moving with enlightened concert. Our own pecuniary claims have been allowed, or put in course of settlement, and the inland sea has been reopened to commerce. There is reason also to believe that these proceedings have increased rather than diminished the friendship of Japan toward the United States.

The ports of Norfolk, Fernandina, and Pensacola, have been opened by proclamation. It is hoped that foreign merchants will now consider whether it is not safer and more profitable to themselves, as well as just to the United States, to resort to these and other open ports, than it is to pursue, through many hazards and at vast cost, a contraband trade with other ports which are closed, if not by actual military occupation, at least by a lawful and effective blockade.

For myself, I have no doubt of the power and duty of the Executive, under the law of nations, to exclude enemies of the human race from an asylum in the United States. If Congress should think that proceedings in such cases lack the authority of law, or ought to be further regulated by it, I recommend that provision be made for effectually preventing foreign slave traders from acquiring domicile and facilities for their criminal occupation in our country.

It is possible that, if it were a new and open question, the maritime powers, with the lights they now enjoy, would not concede the privileges of a naval belligerent to the insurgents of the United States, destitute, as they are, and always have been, equally of ships of war and of ports and harbors. Disloyal emissaries have been neither less assiduous nor more

successful during the last year than they were before that time in their efforts, under favor of that privilege, to embroil our country in foreign wars. The desire and determination of the Governments of the maritime States to defeat that design are believed to be as sincere as and cannot be more earnest than our own. Nevertheless, unforeseen political difficulties have arisen, especially in Brazilian and British ports, and on the northern boundary of the United States, which have required, and are likely to continue to require, the practice of constant vigilance, and a just and conciliatory spirit on the part of the United States as well as of the nations concerned and their governments.

Commissioners have been appointed under the treaty with Great Britain on the adjustment of the claims of the Hudson's Bay and Puget's Sound Agricultural Companies, in Oregon, and are now proceeding to the execution of the trust assigned them.

In view of the insecurity of life and property in the region adjacent to the Canadian border, by reason of recent assaults and depredations committed by inimical and desperate persons, who are harbored there, it has been thought proper to give notice that after the expiration of six months, the period conditionally stipulated in the existing arrangement with Great Britain, the United States must hold themselves at liberty to increase their naval armament upon the lakes, if they shall find that proceeding necessary. The condition of the border will necessarily come into consideration in connection with the question of continuing or modifying the rights of transit from Canada through the United States, as well as the regulation of imports, which were temporarily established by the reciprocity treaty of the 6th June, 1854.

I desire, however, to be understood, while making this statement, that the colonial authorities of Canada are not deemed to be intentionally unjust or unfriendly toward the United States; but, on the contrary, there is every reason to expect that, with the approval of the Imperial Government, they will make the necessary measures to prevent new incursions across the border.

The act passed at the last session for the encouragement of emigration has, so far as was possible, been put into operation. It seems to need amendment which will enable the officers of the Government to prevent the practice of frauds against the immigrants while on their way, and on their arrival in the ports, so as to secure them here a free choice of avocations and places of settlement. A liberal disposition toward this great national policy is manifested by most of the European States, and ought to be reciprocated on our part by giving the immigrants effective protection. I regard our emigrants as one of the principal replenishing streams which are appointed by Providence to repair the ravages of internal war, and its wastes of national strength and health. All that is necessary is to secure the flow of that stream in its present fulness, and to that end the Government must, in every way, make it manifest that it neither needs nor designs to impose involuntary military service upon those who come from other lands to cast their lot in our country.

The financial affairs of the Government have been successfully administered during the past year. The legislation of the last session of Congress has beneficially affected the revenues, although sufficient time has not yet elapsed to experience the full effect of several of the provisions of the acts of Congress imposing increased taxation.

The receipts during the year, from all sources, upon the basis of warrants signed by the Secretary of the Treasury, including loans and the balance in the Treasury, on the first day of July, 1863, were \$1,394,796,007.62; and the aggregate disbursements, upon the same basis, were \$1,298,066,101.89, leaving a balance in the Treasury, as shown by warrants, of \$96,746,905.73.

Deduct from these amounts the amount of the principal of the public debt redeemed, and the amount of issues in substitution therefor, and the actual cash operations of the Treasury were: receipts, \$384,078,644.57; disbursements, \$365,234,087.86; which leaves a cash balance in the Treasury of \$18,842,558.71.

Of the receipts, there were derived from customs \$103,816,153.99; from lands, \$588,333.29; from direct taxes, \$475,648.96; from internal revenue, \$109,741,134.10; from miscellaneous sources, \$47,511,448.10; and from loans applied to actual expenditures, including former balance, \$623,443,929.13.

There were disbursed, for the civil service, \$27,505,599.46; for pensions and Indians, \$7,517,930.97; for the War Department, \$690,791,842.97; for the Navy Department, \$85,733,292.77; for interest of the public debt, \$53,685,491.69—making an aggregate of \$865,234,087.86, and leaving a balance in the Treasury of \$18,842,558.71, as before stated.

For the actual receipts and disbursements for the first quarter, and the estimated receipts and disbursements for the three remaining quarters of the current fiscal year, and the general operations of the Treasury in detail, I refer you to the report of the Secretary of the Treasury. I concur with him in the opinion that the proportion of moneys required to meet the expenses consequent upon the war derived from taxation should be still further increased; and I earnestly invite your attention to this subject, to the end that there may be such additional legislation as shall be required to meet the just expectations of the Secretary.

The public debt on the 1st day of July last, as appears by the books of the Treasury, amounted to \$1,740,690,489.49. Probably, should the war continue for another year, that amount may be increased by not far from five hundred millions. Held as it is, for the most part, by our own people, it has become a substantial branch of national, though private property. For obvious reasons, the more nearly this property can be distributed among all the people the better. To favor such general distribution, greater inducements to become owners might, perhaps, with good effect, and without injury, be presented to persons of limited means. With this view, I suggest whether it might not be both competent and expedient for Congress to provide that a limited amount of some future issue of public securities might be held by any *bona fide* purchaser exempt from taxation, and from seizure for debt, under such restrictions and limitations as might be necessary to guard against abuse of so important a privilege. This would enable every prudent person to set aside a small annuity against a possible day of want.

Privileges like these would render the possession of such securities to the amount limited, most desirable to every person of small means who might be able to save enough for the purpose. The great advantage of citizens being creditors as well as debtors, with relation to the public debt, is obvious. Men readily perceive that they cannot be much oppressed by a debt which they owe to themselves.

The public debt on the first day of July last, although somewhat exceeding the estimate of the Secretary of the Treasury made to Congress at the commencement of the last session, falls short of the estimate of that officer made in the preceding December, as to its probable amount at the beginning of this year, by the sum of \$3,995,097.81. This fact exhibits a satisfactory condition and conduct of the operations of the Treasury.

The national banking system is proving to be acceptable to capitalists and to the people. On the 25th day of November 684 national banks had been organized, a considerable number of which were conversions from State banks. Changes from State systems to the national systems are rapidly taking place, and it is hoped that, very soon, there will be in the United States no banks of issue not authorized

by Congress, and no bank note circulation not secured by the Government. That the Government and the people will derive great benefit from this change in the banking systems of the country can hardly be questioned. The national system will create a reliable and permanent influence in support of the national credit, and protect the people against losses in the use of paper money. Whether or not any further legislation is advisable for the suppression of State bank issues, it will be for Congress to determine. It seems quite clear that the Treasury cannot be satisfactorily conducted unless the Government can exercise a restraining power over the bank note circulation of the country.

The report of the Secretary of War and the accompanying documents will detail the campaigns of the armies in the field since the date of the last annual message, and also the operations of the several administrative bureaus of the War Department during the last year. It will also specify the measures deemed essential for the national defence, and to keep up and supply the requisite military force.

The report of the Secretary of the Navy presents a comprehensive and satisfactory exhibit of the affairs of that department and of the naval service. It is a subject of congratulation and laudable pride to our countrymen that a navy of such vast proportions has been organized in so brief a period, and conducted with so much efficiency and success.

The general exhibit of the navy, including vessels under construction on the 1st of December, 1864, shows a total of 671 vessels, carrying 4,610 guns, and of 510,308 tons, being an increase during the year over and above all losses in shipwreck or in battle, of 83 vessels, 167 guns, and 42,427 tons. The total number of men at this time in the naval service, including officers, is about 51,000.

There have been captured by the navy during the year 324 vessels, and the whole number of naval captures since hostilities commenced is 1,379, of which 267 are steamers.

The gross proceeds arising from the sale of condemned prize property, thus far reported, amount to \$14,396,250.51. A large amount of such proceeds is still under adjudication and yet to be reported.

The total expenditure of the Navy Department of every description, including the cost of the immense squadrons that have been called into existence from the 4th of March, 1861, to the 1st of November, 1864, are \$238,647,262.25.

Your favorable consideration is invited to the various recommendations of the Secretary of the Navy, especially in regard to a navy yard and suitable establishment for the construction and repair of iron vessels, and the machinery and armature for our ships, to which reference was made in my last annual message.

Your attention is also invited to the views expressed in the report in relation to the legislation of Congress at its last session in respect to prize on our inland waters.

I cordially concur in the recommendation of the Secretary as to the propriety of creating the new rank of vice-admiral in our naval service.

Your attention is invited to the report of the Postmaster General for a detailed account of the operations and financial condition of the Post Office Department.

The postal revenues for the year ending June 30, 1864, amounted to \$12,438,258.78, and the expenditures to \$12,644,786.20; the excess of expenditures over receipts being \$206,527.42.

The views presented by the Postmaster General on the subject of special grants by the Government in aid of the establishment of new lines of ocean mail steamships, and the policy he recommends for the development of increased commercial intercourse with adjacent and neighboring countries, should receive the careful consideration of Congress.

It is of noteworthy interest that the steady expan-

sion of population, improvement, and governmental institutions over the new and unoccupied portions of our country have scarcely been checked, much less impeded or destroyed, by our great civil war, which at first glance would seem to have absorbed almost the entire energies of the nation.

The organization and admission of the State of Nevada has been completed in conformity with law, and thus our excellent system is firmly established in the mountains, which once seemed a barren and uninhabitable waste between the Atlantic States and those which have grown up on the coast of the Pacific Ocean.

The Territories of the Union are generally in a condition of prosperity and rapid growth. Idaho and Montana, by reason of their great distance and the interruption of communication with them by Indian hostilities, have been only partially organized; but it is understood that these difficulties are about to disappear, which will permit their governments, like those of the others, to go into speedy and full operation.

As intimately connected with and promotive of this material growth of the nation, I ask the attention of Congress to the valuable information and important recommendations relating to the public lands, Indian affairs, the Pacific Railroad, and mineral discoveries, contained in the report of the Secretary of the Interior, which is herewith transmitted, and which report also embraces the subjects of patents, pensions, and other topics of public interest pertaining to his department.

The quantity of public land disposed of during the five quarters ending on the 30th of September last, was 4,221,842 acres, of which 1,588,614 acres were entered under the homestead law. The remainder was located with military land warrants, agricultural scrip certified to States for railroads, and sold for cash. The cash received for sales and location fees was \$1,019,446.

The income from sales during the fiscal year ending June 30, 1864, was \$678,007.21, against \$186,077.95 received during the preceding year. The aggregate number of acres surveyed during the year has been equal to the quantity disposed of; and there is open to settlement about 138,000,000 acres of surveyed land.

The great enterprise of connecting the Atlantic with the Pacific States by railways and telegraph lines has been entered upon with a vigor that gives assurance of success notwithstanding the embarrassments arising from the prevailing high prices of materials and labor. The route of the main line of the road has been definitely located for one hundred miles westward from the initial point of Omaha City, Nebraska, and a preliminary location of the Pacific Railroad of California has been made from Sacramento eastward to the great bend of the Truckee River in Nevada.

Numerous discoveries of gold, silver, and cinnabar mines have been added to the many heretofore known, and the country occupied by the Sierra Nevada and Rocky Mountains and the subordinate ranges, now teems with enterprising labor, which is richly remunerative. It is believed that the product of the mines of precious metals in that region has during the year reached, if not exceeded, one hundred millions in value.

It was recommended in my last annual message that our Indian system be remodelled. Congress, at its last session, acting upon the recommendation, did provide for reorganizing the system in California; and it is believed that under the present organization the management of the Indians there will be attended with reasonable success. Much yet remains to be done to provide for the proper government of the Indians in other parts of the country to render it secure for the advancing settler, and to provide for the welfare of the Indian. The Secretary reiterates his recommendations, and to them the attention of Congress is invited.

The liberal provision made by Congress for paying pensions to invalid soldiers and sailors of the republic, and to the widows, orphans, and dependent mothers of those who have fallen in battle, or died of disease contracted, or of wounds received in the service of their country, have been diligently administered. There have been added to the pension rolls during the year ending the 30th day of June last the names of 18,770 invalid soldiers, and of 271 disabled seamen, making the present number of army invalid pensioners 22,797, and of navy invalid pensioners, 712.

Of widows, orphans, and mothers, 22,198 have been placed on the army pension rolls, and 248 on the navy rolls. The present number of army pensioners of this class is 25,438, and of navy pensioners, 798. At the beginning of the year the number of Revolutionary pensioners was 1,430; only twelve of them were soldiers, of whom seven have since died. The remainder are those who, under the law, receive pensions because of relationship to Revolutionary soldiers. During the year ending the 30th of June, 1864, \$4,504,616.97 have been paid to pensioners of all classes.

I cheerfully commend to your continued patronage the benevolent institutions of the District of Columbia which have hitherto been established or fostered by Congress; and respectfully refer, for information concerning them, and in relation to the Washington Aqueduct, the Capitol, and other matters of local interest, to the report of the Secretary.

The Agricultural Department, under the supervision of its present energetic and faithful head, is rapidly commending itself to the great and vital interest it was created to advance. It is peculiarly the people's department, in which they feel more directly concerned than in any other. I commend it to the continued attention and fostering care of Congress.

The war continues. Since the last annual message all the important lines and positions then occupied by our forces have been maintained, and our arms have steadily advanced; thus liberating the regions left in rear, so that Missouri, Kentucky, Tennessee, and parts of other States have again produced reasonably fair crops.

The most remarkable feature in the military operations of the year is General Sherman's attempted march of three hundred miles directly through the insurgent region. It tends to show a great increase of our relative strength that our General-in-Chief should feel able to confront and hold in check every active force of the enemy, and yet to detach a well appointed large army to move on such an expedition. The result not yet being known, conjecture in regard to it is not here indulged.

Important movements have also occurred during the year to the effect of moulding society for durability in the Union. Although short of complete success, it is much in the right direction, that twelve thousand citizens in each of the States of Arkansas and Louisiana have organized State governments, with free constitutions, and are earnestly struggling to maintain and administer them. The movements in the same direction, more extensive, though less definite, in Missouri, Kentucky, and Tennessee, should not be overlooked. But Maryland presents the example of complete success. Maryland is secure to liberty and Union for all the future. The genius of rebellion will no more claim Maryland. Like another foul spirit, being driven out, it may seek to tear her, but it will woo her no more.

At the last session of Congress a proposed amendment to the Constitution, abolishing slavery throughout the United States, passed the Senate, but failed for lack of the requisite two-thirds vote in the House of Representatives. Although the present is the same Congress, and nearly the same members, and without questioning the wisdom or patriotism of those who stood in opposition, I venture to recom-

mend the reconsideration and passage of the measure at the present session. Of course the abstract question is not changed; but an intervening election shows, almost certainly, that the next Congress will pass the measure if this does not. Hence there is only a question of time as to when the proposed amendment will go to the States for their action. And as it is to go, at all events, may we not agree that the sooner the better?

It is not claimed that the election has imposed a duty on members to change their views or their votes, any further than, as an additional element to be considered, their judgment may be affected by it. It is the voice of the people now, for the first time, heard upon the question. In a great national crisis like ours unanimity of action among those seeking a common end is very desirable, almost indispensable. And yet no approach to such unanimity is attainable unless some deference shall be paid to the will of the majority, simply because it is the will of the majority. In this case, the common end is the maintenance of the Union; and, among the means to secure that end, such will, through the election, is most clearly declared in favor of such constitutional amendment.

The most reliable indication of public purpose in this country is derived through our popular elections. Judging by the recent canvass and its result, the purpose of the people, within the loyal States, to maintain the integrity of the Union was never more firm nor more nearly unanimous than now. The extraordinary calmness and good order with which the millions of voters met and mingled at the polls give strong assurance of this. Not only all those who supported the Union ticket, so called, but a great majority of the opposing party also may be fairly claimed to entertain and to be actuated by the same purpose.

It is an unanswerable argument to this effect that no candidate for any office whatever, high or low, has ventured to seek votes on the avowal that he was for giving up the Union. There has been much impugning of motives, and much heated controversy as to the proper means and best mode of advancing the Union cause; but on the distinct issue of Union or no Union the politicians have shown their instinctive knowledge that there is no diversity among the people. In affording the people the fair opportunity of showing, one to another and to the world, this firmness and unanimity of purpose, the election has been of vast value to the national cause.

The election has exhibited another fact not less valuable to be known—the fact that we do not approach exhaustion in the most important branch of national resources—that of living men. While it is melancholy to reflect that the war has filled so many graves, and carried mourning to so many hearts, it is some relief to know that, compared with the surviving, the fallen have been so few. While corps, and divisions, and brigades, and regiments have formed, and fought, and dwindled and gone out of existence, a great majority of the men who composed them are still living. The same is true of the naval service. The election returns prove this. So many voters could not else be found. The States regularly holding elections, both now and four years ago, to wit, California, Connecticut, Delaware, Illinois, Indiana, Iowa, Kentucky, Maine, Maryland, Massachusetts, Michigan, Minnesota, Missouri, New Hampshire, New Jersey, New York, Ohio, Oregon, Pennsylvania, Rhode Island, Vermont, West Virginia, and Wisconsin, cast 3,982,011 votes now, against 3,870,222 cast then, showing an aggregate now of 3,982,011. To this is to be added 88,763 cast now in the new States of Kansas and Nevada, which States did not vote in 1860, thus swelling the aggregate to 4,016,783, and the net increase during the three years and a half of war to 145,551. A table is appended showing particulars. To this again should be added the number of all soldiers in the field from

Massachusetts, Rhode Island, New Jersey, Delaware, Indiana, Illinois, and California, who, by the laws of those States, could not vote away from their homes, and which number cannot be less than 90,000. Nor yet is this all. The number in organized Territories is triple now what it was four years ago, while thousands, white and black, join us as the national arms press back the insurgent lines.

So much is shown, affirmatively and negatively, by the election. It is not material to inquire how the increase has been produced, or to show that it would have been greater but for the war, which is probably true. The important fact remains demonstrated that we have more men now than we had when the war began; that we are not exhausted, nor in process of exhaustion; that we are gaining strength, and may, if need be, maintain the contest indefinitely. This as to men. Material resources are now more complete and abundant than ever.

The national resources, then, are unexhausted, and, as we believe, inexhaustible. The public purpose to reestablish and maintain the national authority is unchanged, and, as we believe, unchangeable. The manner of continuing the effort remains to choose. On careful consideration of all the evidence accessible, it seems to me that no attempt at negotiation with the insurgent leader could result in any good. He would accept nothing short of severance of the Union—precisely what we will not and cannot give. His declarations to this effect are explicit and oft-repeated. He does not attempt to deceive us. He affords us no excuse to deceive ourselves.

He cannot voluntarily reaccept the Union; we cannot voluntarily yield it. Between him and us the issue is distinct, simple, and inflexible. It is an issue which can only be tried by war and decided by victory. If we yield, we are beaten; if the Southern people fail him, he is beaten. Either way, it would be victory and defeat following war. What is true, however, of him who heads the insurgent cause is not necessarily true of those who follow.

Although he cannot reaccept the Union, they can. Some of them, we know, already desire peace and reunion. The number of such may increase. They can, at any moment, have peace simply by laying down their arms and submitting to the national authority under the Constitution. After so much, the Government could not, if it would, maintain war against them. The loyal people would not sustain or allow it.

If questions should remain, we would adjust them by the peaceful means of legislation, conference, courts, and votes, operating only in constitutional and lawful channels. Some certain, and other possible, questions are, and would be, beyond the Executive power to adjust; as, for instance, the admission of members into Congress, and whatever might require the appropriation of money. The Executive power itself would be greatly diminished by the cessation of actual war. Pardons and remissions of forfeitures, however, would still be within Executive control. In what spirit and temper this would be exercised can be easily judged by the past.

A year ago general pardon and amnesty, upon specified terms, were offered to all, except certain designated classes, and it was, at the same time, made known that the excepted classes were still within contemplation of special clemency. During the year many availed themselves of the general provision, and many more would, only that the signs of bad faith in some led to such precautionary measures as rendered the practical process less easy and certain. During the same time, also, special pardons have been granted to individuals of the excepted classes, and no voluntary application has been denied.

Thus, practically, the door has been, for a full year, open to all, except such as were not in condition to make free choice—that is, such as were in

custody or under constraint. It is still so pen to all. But the time may come—probably will come—when public duty shall demand that it be closed; and that in lieu more rigorous measures than heretofore shall be adopted.

In presenting the abandonment of armed resistance to the national authority on the part of the insurgents as the only indispensable condition to ending the war on the part of the Government, I retract nothing heretofore said as to slavery. I repeat the declaration made a year ago, that "while I remain in my present position I shall not attempt to retract or modify the emancipation proclamation, nor shall I return to slavery any person who is free by the terms of that proclamation, or by any act of Congress."

If the people should, by whatever mode or means, make it an executive duty to reenslave such persons, another, and not I, must be their instrument to perform it.

In stating a single condition of peace, I mean to say that the war will cease on the part of the Government whenever it shall have ceased on the part of those who began it.

ABRAHAM LINCOLN.

DECEMBER, 6, 1864.

Jefferson Davis's Message.

*To the Senate and House of Representatives
of the Confederate States of America:*

You are assembled under circumstances of deep interest to your country; and it is fortunate that, coming as you do, newly elected by the people and familiar with the condition of the various localities, you will be the better able to devise measures adapted to meet the wants of the public service without imposing unnecessary burdens on the citizen. The brief period which has elapsed since the last adjournment of Congress has not afforded sufficient opportunity to test the efficacy of the most important laws then enacted, nor have the events occurring in the interval been such as materially to change the state of the country.

The unjust war commenced against us, in violation of the rights of the States, and in usurpation of power not delegated to the Government of the United States, is still characterized by the barbarism with which it has heretofore been conducted by the enemy. Aged men, helpless women and children, appeal in vain to the humanity which should be inspired by their condition, for immunity from arrest, incarceration, or banishment from their homes. Plunder and devastation of the property of non-combatants, destruction of private dwellings, and even of edifices devoted to the worship of God; expeditions organized for the sole purpose of sacking cities, consigning them to the flames, killing the unarmed inhabitants, and inflicting horrible outrages on women and children, are some of the constantly recurring atrocities of the invader. It cannot reasonably be pretended that such acts conduce to any end which their authors dare avow before the civilized world, and sooner or later Christendom must mete out to them the condemnation which such brutality deserves. The sufferings thus ruthlessly inflicted upon the people of the invaded districts has served but to illustrate their patriotism. Entire unanimity and zeal for their country's cause have been preeminently conspicuous among those whose sacrifices have been greatest. So the army which has borne the trials and dangers of the war; which has been subjected to privations and disappointments (tests of manly fortitude far more severe than the brief fatigues and perils of actual combat), has been the centre of cheerfulness and hope. From the camp comes the voice of the soldier patriot invoking each who is at home, in the sphere he best may fill, to devote his whole energies to the support of a cause, in the success of which their confidence has never faltered. They, the veterans of many a hard-fought field, tender to their country,

without limit of time, a service of priceless value to us, one which posterity will hold in grateful remembrance.

In considering the state of the country, the reflection is naturally suggested that this is the third Congress of the Confederate States of America. The provisional government was formed, its Congress held four sessions, lived its appointed term, and passed away. The permanent government was then organized, its different departments established, a Congress elected, which also held four sessions, served its full constitutional term, and expired. You, the second Congress under the permanent government, are now assembled at the time and place appointed by law for commencing your session. All these events have passed into history, notwithstanding the threat of our prompt subjugation, made three years ago, by a people that presume to assert a title to govern States whose separate and independent sovereignty was recognized by treaty with France and Great Britain in the last century, and remained unquestioned for nearly three generations. Yet these very governments, in disregard of duty and treaty obligations, which bind them to recognize as independent Virginia and other Confederate States, persist in countenancing, by moral influence, if not in aiding by unfair and partial action, the claim set up by the Executive of a foreign government to exercise despotic sway over the States thus recognized, and treat the invasion of them by their former limited and special agent as though it were the attempt of a sovereign to suppress a rebellion against lawful authority. Ungenerous advantage has been taken of our present condition, and our rights have been violated, our vessels-of-war detained in ports to which they had been invited by proclamations of neutrality, and in one instance our flag also insulted where the sacred right of asylum was supposed to be secure; while one of these governments has contented itself with simply deprecating by deferential representations the conduct of our enemy in the constantly-recurring instances of his contemptuous disregard of neutral rights and flagrant violations of public law. It may be that foreign governments, like our enemies, have mistaken our desire for peace, unreservedly expressed, for evidence of exhaustion, and have thence inferred the probability of success in the efforts to subjugate or exterminate the millions of human beings who, in these States, prefer any fate to submission to their savage assailants.

I see no prospect of an early change in the course heretofore pursued by these governments; but when this delusion shall have been dispelled, and when our independence, by the valor and fortitude of our people, shall have been won against all the hostile influences combined against us, and can no longer be ignored by open foes or professed neutrals, this war will have left, with its proud memories, a record of many wrongs, which it may not misbecome us to forgive—some for which we may not properly forbear from demanding redress. In the mean time, it is enough for us to know that every avenue of negotiation is closed against us; that our enemy is making renewed and strenuous efforts for our destruction, and that the sole resource for us, as a people secure in the justice of our cause and holding our liberties to be more precious than all other earthly possessions, is to combine and apply every available element of power for their defence and preservation.

On the subject of the exchange of prisoners I greatly regret to be unable to give you satisfactory information. The Government of the United States, while persisting in failure to execute the terms of the cartel, make occasional deliveries of prisoners, and then suspend action without apparent cause. I confess my inability to comprehend their policy or purpose. The prisoners held by us, in spite of humane care, are perishing from the inevitable effects of imprisonment and the home sickness produced by the hopelessness of release from confinement. The

spectacle of their suffering augments our longing desire to relieve from similar trials our own brave men, who have spent so many weary months in a cruel and useless imprisonment, endured with heroic constancy. The delivery, after a suspension of some weeks, has just been resumed by the enemy; but as they give no assurance of intent to carry out the cartel, an interruption of the exchange may recur at any moment.

The reports of the departments, herewith submitted, are referred to for full information in relation to the matters appertaining to each. There are two of them on which I deem it necessary to make special remark.

The report of the Secretary of the Treasury states facts justifying the conclusion that the law passed at the last session for the purpose of withdrawing from circulation the large excess of Treasury notes heretofore issued, has had the desired effect, and that by the 1st July the amount in circulation will have been reduced to a sum not exceeding \$280,000,000. It is believed to be of primary importance that no further issue of notes should take place, and that the use of the credit of the Government should be restricted to the two other modes provided by Congress, viz.: the sale of bonds and the issue of certificates bearing interest, for the price of supplies purchased within our limits. The law, as it now stands, authorizes the issue by the Treasury of new notes to the extent of two-thirds of the amount received under its provisions. The estimate of the amount funded under this law is shown to be \$800,000,000, and if two-thirds of this sum be reissued, we shall have an addition of \$200,000,000 to our circulation, believed to be already ample for the business of the country. The addition of this large sum to the volume of the currency would be attended by disastrous effects, and would produce the speedy recurrence of the evils from which the funding law has rescued the country. If our arms are crowned with the success which we have so much reason to hope, we may well expect that this war cannot be prolonged beyond the current year, and nothing would so much retard the beneficent influence of peace on all the interests of our country, as the existence of a great mass of currency not redeemable in coin. With our vast resources, the circulation, if restricted to its present volume, would be easily manageable, and by gradual absorption in payment of public dues, would give place to the precious metals, the only basis of a currency adapted to commerce with foreign countries. In our present circumstances I know of no mode of providing for the public wants which would entail sacrifices so great as a fresh issue of Treasury notes, and I trust that you will concur in the propriety of absolutely forbidding any increase of those now in circulation.

Officers have been appointed and despatched to the trans-Mississippi States, and the necessary measures taken for the execution of the laws, enacted to obviate delays in administering the Treasury and other Executive Departments in those States; but sufficient time has not elapsed to ascertain the results.

In relation to the most important of all subjects at the present time—the efficiency of our armies in the field—it is gratifying to assure you that the discipline and instruction of the troops have kept pace with the improvement in material and equipment. We have reason to congratulate ourselves on the results of the legislation on this subject and on the increased administrative energy in the different bureaux of the War Department, and may not unreasonably indulge anticipations of commensurate success in the ensuing campaign.

The organization of reserves is in progress, and it is hoped they will be valuable in affording local protection without requiring details and detachments from active force.

Among the recommendations contained in the report of the Secretary of War, your attention is spe-

cially invited to those in which legislation is suggested on the following subjects, viz. :

The tenure of office of the general officers in the provisional army, and a proper discrimination in the compensation of the different grades.

The provision required in aid of invalid officers who have resigned in consequence of wounds or sickness contracted while in the service.

The amendment of the law which deprives officers in the field of the privilege of purchasing rations, and thus adds to their embarrassment, instead of conferring the benefit intended.

The organization of the general staff of the army, in relation to which a special message will shortly be addressed to you, containing the reasons which compelled me to withhold my approval of a bill passed by your predecessors at too late a period of the session to allow time for returning it for their reconsideration.

The necessity for an increase in the allowance now made for the transportation of officers travelling under orders.

The mode of providing officers for the execution of the conscript laws.

The means of securing greater despatch and more regular administration of justice in examining and disposing of the records of cases reported from the courts-martial and military courts in the army.

The recent events of the war are highly creditable to our troops, exhibiting energy and vigilance combined with the habitual gallantry which they have taught us to expect on all occasions. We have been cheered by important and valuable successes in Florida, Northern Mississippi, Western Tennessee, and Kentucky, Western Louisiana and Eastern North Carolina, reflecting the highest honor on the skill and conduct of our commanders, and on the incomparable soldiers whom it is their privilege to lead. A naval attack on Mobile was so successfully repulsed at the outer works that the attempt was abandoned, and the nine months' siege of Charleston has been practically suspended, leaving that noble city and its fortresses, imperishable monuments to the skill and fortitude of its defenders. The armies in Northern Georgia and in Northern Virginia still oppose, with unshaken front, a formidable barrier to the progress of the invader; and our generals, armies and people, are animated by cheerful confidence.

Let us, then, while resolute in devoting all our energies to securing the realization of the bright auspices which encourage us, not forget that our humble and most grateful thanks are due to Him, without whose guidance and protecting care all human efforts are of no avail, and to whose interposition are due the manifold successes with which we have been cheered.

JEFFERSON DAVIS.

RICHMOND, May 2, 1864.

Jefferson Davis's Message.

*To the Senate and House of Representatives
of the Confederate States of America :*

It is with satisfaction that I welcome your presence at an earlier day than that usual for your session, and with confidence that I invoke the aid of your counsel at a time of such public exigency. The campaign which was commenced almost simultaneously with your session in May last, and which was still in progress at your adjournment in the middle of June, has not yet reached its close. It has been prosecuted on a scale and with an energy heretofore unequalled. When we revert to the condition of our country at the inception of the operations of the present year, to the magnitude of the preparations made by the enemy, the number of his forces, the accumulation of his warlike supplies, and the prodigality with which his vast resources have been lavished in the attempt to render success assured; when we con-

trast the numbers and means at our disposal for resistance, and when we contemplate the results of a struggle apparently so unequal, we cannot fail, while rendering the full meed of deserved praise to our generals and soldiers, to perceive that a power higher than man has willed our deliverance, and gratefully to recognize the protection of a kind Providence in enabling us successfully to withstand the utmost efforts of the enemy for our subjugation.

At the beginning of the year the State of Texas was partially in possession of the enemy, and large portions of Louisiana and Arkansas lay apparently defenceless. Of the Federal soldiers who invaded Texas, none are known to remain except as prisoners of war. In northwestern Louisiana a large and well-appointed army, aided by a powerful fleet, was repeatedly defeated, and deemed itself fortunate in finally escaping with a loss of one-third of its numbers, a large part of its military trains, and many transports and gunboats. The enemy's occupation of that State is reduced to the narrow district commanded by the guns of his fleet. Arkansas has been recovered with the exception of a few fortified posts, while our forces have penetrated into Central Missouri, affording to our oppressed brethren in that State an opportunity of which many have availed themselves—of striking for liberation from the tyranny to which they have been subjected.

On the east of the Mississippi, in spite of some reverses, we have much cause for congratulation. The enemy hoped to effect, during the present year, by concentration of forces, the conquest which he had previously failed to accomplish by more extended operations. Compelled, therefore, to withdraw, or seriously to weaken the strength of the armies of occupation at different points, he has afforded us the opportunity of recovering possession of extensive districts of our territory. Nearly the whole of northern and western Mississippi, of northern Alabama, and of western Tennessee, are again in our possession; and all attempts to penetrate from the coast line into the interior of the Atlantic and Gulf States have been baffled. On the entire ocean and gulf coast of the Confederacy, the whole success of the enemy, with the enormous naval resources at his command, has been limited to the capture of the outer defences of Mobile Bay.

If we now turn to the results accomplished by the two great armies, so confidently relied on by the invaders as sufficient to secure the subversion of our Government and the subjection of our people to foreign domination, we have still greater cause for devout gratitude to Divine Power. In southwestern Virginia, successive armies which threatened the capture of Lynchburg and Saltville have been routed and driven out of the country, and a portion of Eastern Tennessee reconquered by our troops. In Northern Virginia extensive districts formerly occupied by the enemy are now free from their presence. In the lower valley, their general rendered desperate by his inability to maintain a hostile occupation, has resorted to the infamous expedient of converting a fruitful land into a desert by burning its mills, granaries, and homesteads, and destroying the food, standing crops, live stock, and agricultural implements of peaceful non-combatants. The main army, after a series of defeats in which its losses have been enormous; after attempts by raiding parties to break up our railroad communications, which have resulted in the destruction of a large part of the cavalry engaged in the work; after constant repulse of repeated assaults on our defensive lines, is, with the aid of heavy reinforcements, but with, it is hoped, waning prospect of further progress in the design, still engaged in an effort, commenced more than four months ago, to capture the town of Petersburg.

The army of Gen. Sherman, although succeeding at the end of the summer in obtaining possession of Atlanta, has been unable to secure any ultimate ad-

vantage from this success. The same general who, in February last, marched a large army from Vicksburg to Meridian with no other result than being forced to march back again, was able, by the aid of greatly-increased numbers, and after much delay, to force a passage from Chattanooga to Atlanta, only to be for the second time compelled to withdraw on the line of his advance, without obtaining control of a single mile of territory beyond the narrow track of his march, and without gaining aught beyond the precarious possession of a few fortified points in which he is compelled to maintain heavy garrisons, and which are menaced with recapture.

The lessons afforded by the history of this war are fraught with instruction and encouragement. Repeatedly during the war have formidable expeditions been directed by the enemy against points ignorantly supposed to be of vital importance to the Confederacy. Some of these expeditions have, at immense cost, been successful; but in no instance have the promised fruits been reaped. Again, in the present campaign, was the delusion fondly cherished that the capture of Atlanta and Richmond would, if effected, end the war by the overthrow of our Government and the submission of our people. We can now judge by experience how unimportant is the influence of the former event upon our capacity for defence, upon the courage and spirit of the people, and the stability of the Government. We may, in like manner, judge that if the campaign against Richmond had resulted in success instead of failure; if the valor of the army under the leadership of its accomplished commander, had resisted in vain the overwhelming masses which were, on the contrary, decisively repulsed; if we had been compelled to evacuate Richmond as well as Atlanta, the Confederacy would have remained as erect and defiant as ever. Nothing could have been changed in the purpose of its Government, in the indomitable valor of its troops, or in the unquenchable spirit of its people. The baffled and disappointed foe would in vain have scanned the reports of your proceedings at some new legislative seat, for any indication that progress had been made in his gigantic task of conquering a free people. The truth so patent to us must ere long be forced upon the reluctant Northern mind. There are no vital points on the preservation of which the continued existence of the Confederacy depends. There is no military success of the enemy which can accomplish its destruction. Not the fall of Richmond, nor Wilmington, nor Charleston, nor Savannah, nor Mobile, nor of all combined, can save the enemy from the constant and exhaustive drain of blood and treasure which must continue until he shall discover that no peace is attainable unless based on the recognition of our indefeasible rights.

Before leaving this subject it is gratifying to assure you that the military supplies essentially requisite for military defence will be found, as heretofore, adequate to our needs; and that abundant crops have rewarded the labor of the farmer, and rendered abortive the inhuman attempt of the enemy to produce, by devastation, famine among the people.

It is not in my power to announce any change in the conduct of foreign powers. No such action has been taken by the Christian nations of Europe as might justly have been expected from their history, from the duties imposed by international law, and from the claims of humanity. It is charitable to attribute their conduct to no worse motive than indifference to the consequences which shakes only the republican portion of the American continent; and not to ascribe to design a course calculated to insure the prolongation of hostilities.

No instance in history is remembered by me in which a nation pretending to exercise dominion over another, asserting its independence, has been the first to concede the existence of such independence. No case can be recalled to my mind in which neutral powers have failed to set the example of recognizing

the independence of a nation, when satisfied of the inability of its enemy to subvert its Government; and this, too, in cases where the previous relation between the contending parties had been confessedly that of mother country and dependent colony, not as in our case, that of coequal States united by Federal compact. It has never been considered the proper function and duty of neutral powers to perform the office of judging whether in point of fact the nation asserting dominion is able to make good its pretensions by force of arms, and if not, by recognition of the resisting party to discountenance the further continuance of the contest. And the reason why this duty is incumbent on neutral powers is plainly apparent when we reflect that the pride and passion which blind the judgment of the parties to the conflict cause the continuance of active warfare, and consequent useless slaughter, long after the inevitable result has become apparent to all not engaged in the struggle. So long, therefore, as neutral nations fail by recognition of our independence to announce that, in their judgment, the United States are unable to reduce the Confederacy to submission, their conduct will be accepted by our enemies as a tacit encouragement to continue their efforts, and as an implied assurance that belief is entertained by neutral nations in the success of their designs. A direct stimulus, whether intentional or not, is thus applied to securing a continuance of the carnage and devastation which desolate this continent, and which they profess deeply to deplore.

The disregard of this just, humane, and Christian public duty by the nations of Europe is the more remarkable from the fact that authentic expression has long since been given by the Governments of both France and England to the conviction that the United States are unable to conquer the Confederacy. It is now more than two years since the Government of France announced officially to the cabinets of London and St. Petersburg its own conclusion that the United States were unable to achieve any decisive military success. In the answers sent by these powers no intimation of a contrary opinion was conveyed; and it is notorious that in speeches, both in and out of Parliament, the members of her Britannic Majesty's Government have not hesitated to express this firm conviction in unqualified terms. The denial of our right under these circumstances is so obviously unjust, and discriminates so unfairly in favor of the United States, that neutrals have sought to palliate the wrong of which they are conscious by professing to consider, in opposition to notorious truth and to the known belief of both belligerents, that the recognition of our independence would be valueless without their further intervention in the struggle; an intervention of which we disclaim the desire and mistrust the advantage.

We seek no favor, we wish no intervention, we know ourselves fully competent to maintain our own rights and independence against the invaders of the country, and we feel justified in asserting, that without the aid derived from recruiting their armies from foreign countries they would, ere this, have been driven from our soil. When the recognition of the Confederacy was refused by Great Britain, in the fall of 1862, the refusal was excused on the ground that any action of Her Majesty's Government would have the effect of inflaming the passions of the belligerents and of preventing the return of peace. It is assumed that this opinion was sincerely entertained, but the experience of two years of unequal carnage, shows that it was erroneous, and that the result was the reverse of what the British ministry humanely desired. A contrary policy, a policy just to us, a policy diverging from an unvarying course of concession to all the demands of our enemies, is still within the power of Her Majesty's Government, and would, it is fair to presume, be productive of consequences the opposite to those which have unfortunately followed its whole course of conduct from the com-

menocement of the war to the present time. In a word, peace is impossible without independence, and it is not to be expected that the enemy will anticipate neutrals in the recognition of that independence. When the history of this war shall be fully disclosed, the calm judgment of the impartial publicist will, for these reasons, be unable to absolve the neutral nations of Europe from a share in the moral responsibility for the myriads of human lives that have been unnecessarily sacrificed during its progress.

The renewed instances in which foreign powers have given us just cause of complaint need not here be detailed. The extracts from the correspondence of the State Department, which accompany this message, will afford such further information as can be given without detriment to the public interest, and we must reserve for the future such action as may then be deemed advisable to secure redress.

Your special attention is earnestly invited to the report of the Secretary of the Treasury, submitted in conformity with law. The facts therein disclosed are far from discouraging, and demonstrated that, with judicious legislation, we shall be enabled to meet all the exigencies of the war from our abundant resources, and avoid, at the same time, such an accumulation of debt as would render at all doubtful our capacity to redeem it.

The total receipts into the Treasury for the two quarters ending on the 30th of September, 1864, were \$415,191,550, which sum, added to the balance of \$308,282,722, that remained in the Treasury on the 1st of April last, forms a total of \$723,474,272. Of this total, not far from half, that is to say, \$342,580,827, have been applied to the extinction of the public debt, while the total expenditures have been \$272,398,505, leaving a balance in the Treasury on the 1st of October, 1864, of \$108,436,440.

The total amount of the public debt, as exhibited on the books of the Register of the Treasury, on the 1st October, 1864, was \$1,147,970,208, of which \$538,840,090 were funded debt, bearing interest, \$283,880,150 were treasury notes of the new issue, and the remainder consisted of the former issue of treasury notes, which will be converted into other forms of debt, and will cease to exist as currency on the 31st of next month.

The report, however, explains that, in consequence of the absence of certain returns from distant officers, the true amount of the debt is less, by \$21,500,000, than appears on the books of the Register, and that the total public debt on the first of last month may be fairly considered to have been \$1,126,381,095.

The increase of the public debt during the six months from the 1st April to the 1st October, was \$97,650,780, being rather more than \$16,000,000 per month; and it will be apparent, on a perusal of the report, that this augmentation would have been avoided, and a positive reduction of the amount would have been effected, but for certain defects in legislation on the subject of the finances, which are pointed out in the report, and which seem to admit of easy remedy.

In the statements just made the foreign debt is omitted. It consists only of the unpaid balance of the loan known as the cotton loan. This balance is but £2,200,000, and is adequately provided for by about 260,000 bales of cotton owned by the Government, even if the cotton be rated as worth but sixpence per pound.

There is one item of the public debt not included in the tables presented, to which your attention is required. The bounty bonds promised to our soldiers by the third section of the act of 17th February, 1864, were deliverable on the 1st of October. The Secretary has been unable to issue them by reason of an omission in the law, no time being therein fixed for the payment of the bonds.

The aggregate appropriations called for by the different departments of the Government, according to the estimates submitted with the report, for the six

months ending on the 30th June, 1865, amount to \$438,102,679, while the Secretary estimates that there will remain unexpended, out of former appropriations, on the 1st January, 1865, a balance of \$467,416,504. It would, therefore, seem that former estimates have been largely in excess of actual expenditures, and that no additional appropriations are required for meeting the needs of the public service up to the 1st July of next year. Indeed, if the estimates now presented should prove to be as much in excess of actual expenditures as has heretofore been the case, a considerable balance will still remain unexpended at the close of the first half of the ensuing year.

The chief difficulty to be apprehended in connection with our finances results from the depreciation of the Treasury notes, which seems justly to be attributed by the Secretary to two causes—redundancy in amount, and want of confidence in ultimate redemption; for both of which remedies are suggested that will commend themselves to your consideration as being practicable as well as sufficient.

The main features of the plan presented are substantially these:—1st. That the faith of the Government be pledged that the notes shall ever remain exempt from taxation. 2d. That no issue shall be made beyond that which is already authorized by law. 3d. That a certain fixed portion of the annual receipts from taxation during the war shall be set apart specially for the gradual extinction of the outstanding amount, until it shall have been reduced to \$150,000,000; and 4th. The pledge and appropriation of such proportion of the tax in kind, and for such number of years after the return of peace, as shall be sufficient for the final redemption of the entire circulation. The details of the plan, the calculations on which it is based, the efficiency of its operation, and the vast advantages which would result from its success, are fully detailed in the report, and cannot be presented in a form sufficiently condensed for this message. I doubt not it will receive from you that earnest and candid consideration which is merited by the importance of the subject.

The recommendations of the report for the repeal of certain provisions of the tax laws which produce inequality in the burden of taxation; for exempting all Government loans from taxation on capital, and from any adverse discrimination in taxation on income derived from them; for placing the taxation on banks on the same footing as the taxation of other corporate bodies; for securing the payment into the Treasury of that portion of the bank circulation which is liable to confiscation, because held by alien enemies; for the conversion of the interest-bearing Treasury notes now outstanding into coupon bonds, and for the quarterly collection of taxation; all present practical questions for legislation, which, if wisely devised, will greatly improve the public credit, and alleviate the burdens now imposed by the extreme and unnecessary depreciation in the value of the currency.

The returns of the Produce Loan Bureau are submitted with the report, and the information is conveyed that the Treasury Agency in the Trans-Mississippi Department has been fully organized and is now in operation, with promise of efficiency and success.

The provision heretofore made to some extent for increasing the compensation of public officers, civil and military, is found to be in some places inadequate to their support; perhaps not more so anywhere than in Richmond, and inquiry, with a view to appropriate remedy, is suggested to your consideration. Your notice is also called to the condition of certain officers of the Treasury, who were omitted in the laws heretofore passed for the relief of other public officers, as mentioned in the report of the Secretary of the Treasury.

The condition of the various branches of the military service is stated in the accompanying report of the Secretary of War. Among the suggestions made

for legislative action with a view to add to the numbers and efficiency of the army, all of which will receive your consideration, there are some prominent topics which merit special notice.

The exemption from military duty now accorded by law to all persons engaged in certain specified pursuits or professions, is shown by experience to be unwise, nor is it believed to be defensible in theory. The defence of home, family, and country, is universally recognized as the paramount political duty of every member of society; and in a form of government like ours, where each citizen enjoys an equality of rights and privileges, nothing can be more invidious than an unequal distribution of duties and obligations. No pursuit nor position should relieve any one, who is able to do active duty, from enrolment in the army, unless his functions or services are more useful to the defence of his country in another sphere. But it is manifest that this cannot be the case with the entire classes. All telegraph operators, workmen in mines, professors, teachers, engineers, editors and employés of newspapers, journeymen printers, shoemakers, tanners, blacksmiths, millers, physicians, and the numerous other classes mentioned in the laws, cannot in the nature of things be either equally necessary in their several professions, nor distributed throughout the country in such proportions that only the exact numbers required are found in each locality; nor can it be everywhere impossible to replace those within the conscript age by men older and less capable of active field services. A discretion should be vested in the military authorities, so that a sufficient number of those essential to the public service might be detailed to continue the exercise of their pursuits or professions, but the exemption from service of the entire classes should be wholly abandoned. It affords great facility for abuses, offers the temptation, as well as the ready means, of escaping service by fraudulent devices, and is one of the principal obstructions to the efficient operation of the conscript laws.

A general militia law is needful in the interest of the public defence. The Constitution, by vesting the power in Congress, imposes on it the duty of providing "for organizing, arming, and disciplining the militia, and for governing such part of them as may be employed in the service of the Confederate States." The great diversity in the legislation of the several States on this subject, and the absence of any provision establishing an exact method for calling the militia into Confederate service, are sources of embarrassment which ought no longer to be suffered to impede defensive measures.

The legislation in relation to the cavalry demands change. The policy of requiring the men to furnish their own horses, has proven pernicious in many respects. It interferes with discipline, impairs efficiency, and is the cause of frequent and prolonged absence from appropriate duty. This subject is fully treated in the Secretary's report, with suggestions as to the proper measures for reforming that branch of the service.

The recommendation hitherto often made is again renewed, that some measure be adopted for the reorganization and consolidation of companies and regiments when so far reduced in numbers as to seriously impair their efficiency. It is the more necessary that this should be done, as the absence of the legislation on the subject has forced generals in the field to resort to various expedients for approximating the desired end. It is surely an evil that a commanding officer should be placed in a position which forces upon him the choice of allowing the efficiency of his command to be seriously impaired, or of attempting to supply by the exercise of doubtful authority the want of proper legal provision. The regard for the sensibility of officers who have heretofore served with credit, and which is believed to be the controlling motive that has hitherto obstructed legislation on this subject, however honorable and prop-

er, may be carried to a point which seriously injures the public good; and, if this be the case, it can scarcely be questioned which of the two considerations should be deemed paramount.

The Secretary's recommendations on the subject of facilitating the acquisition of the iron required for maintaining the efficiency of railroad communication on the important military lines, are commended to your favor. The necessity for the operation in full vigor of such lines is too apparent to need comment.

The question in dispute between the two Governments relative to the exchange of prisoners of war, has been frequently presented in former messages and reports, and is fully treated by the Secretary. The solicitude for the relief of our fellow-citizens has known no abatement; but has, on the contrary, been still more deeply evoked by the additional sufferings to which they have been wantonly subjected, by deprivation of adequate food, clothing, and fuel, which they were not even permitted to purchase from the prison sutlers. Finding that the enemy attempted to excuse their barbarous treatment by the unfounded allegation that it was retaliatory for like conduct on our part, an offer was made by us, with a view of ending all pretext for such recriminations or pretended retaliation.

The offer has been accepted, and each Government is hereafter to be allowed to provide necessary comforts to its own citizens held captive by the other. Active efforts are in progress for the immediate execution of this agreement, and it is hoped that but few days will elapse before we shall be relieved from the distressing thought that painful physical suffering is endured by so many of our fellow-citizens, whose fortitude in captivity illustrates the national character as fully as did their valor in actual conflict.

The employment of slaves for service with the army as teamsters, or cooks, or in the way of work upon fortifications, or in the Government workshops, or in hospitals, and other similar duties, was authorized by the act of 17th February last, and provision was made for their impressment to a number not exceeding twenty thousand, if it should be found impracticable to obtain them by contract with the owners. The law contemplated the hiring only of the labors of those slaves, and imposed on the Government the liability to pay for the value of such as might be lost to the owners from casualties resulting from their employment in the service.

The act has produced less result than was anticipated, and further provision is required to render it efficacious. But my present purpose is to invite your consideration to the propriety of a radical modification in the theory of the law.

Viewed merely as property, and therefore as the subject of imprisonment, the service or labor of the slave has been frequently claimed for short periods, in the construction of defensive works. The slave, however, bears another relation to the State—that of a person. The law of last February contemplates the relation of the slave to the master, and limits the impressment to a certain term of service. But for the purposes enumerated in the act, instruction in the manner of encamping, marching, and parking trains is needful, so that even in this limited employment, length of service adds greatly to the value of the negro's labor. Hazard is also encountered in all the positions to which negroes can be assigned with the army, and the duties required of them demand loyalty and zeal.

In this aspect the relation of person predominates so far as to render it doubtful whether the private right of property can consistently and beneficially be continued, and it would seem proper to acquire for the public service the entire property in the labor of the slave, and to pay therefor due compensation, rather than to impress his labor for short terms; and this the more especially as the effect of the present law would vest this entire property in all cases where

the slave might be recaptured after compensation for his loss had been paid to the private owner. Whenever the entire property in the service of a slave is thus acquired by the Government, the question is presented by what tenure he should be held. Should he be retained in servitude, or should his emancipation be held out to him as a reward of faithful service, or should it be granted at once on the promise of such service; and, if emancipated, what action should be taken to secure the freed man the permission of the State from which he was drawn to reside within its limits after the close of his public service? The permission would doubtless be more readily accorded as a reward for past faithful service; and a double motive for zealous discharge of duty would thus be offered to those employed by the Government, their freedom, and the gratification of the local attachment which is so marked a characteristic of the negro, and forms so powerful an incentive to his action. The policy of engaging to liberate the negro on his discharge after service faithfully rendered, seems to me preferable to that of granting immediate manumission, or that of retaining him in servitude. If this policy should recommend itself to Congress, it is suggested that, in addition to the duties heretofore performed by the slave, he might be advantageously employed as a pioneer and engineer laborer; and in that event, that the number should be augmented to forty thousand.

Beyond this limit and these employments, it does not seem to me desirable, under existing circumstances, to go. A broad, moral distinction exists between the use of slaves as soldiers in the defence of our homes, and the incitement of the same persons to insurrection against their masters. The one is justifiable, if necessary, the other is iniquitous and unworthy of a civilized people; and such is the judgment of all writers on public law, as well as that expressed and insisted on by our enemies in all wars prior to that now waged against us. By none have the practices of which they are now guilty been denounced with greater severity than by themselves, in the two wars with Great Britain, in the last and in the present century; and in the Declaration of Independence of 1776, when enumeration was made of the wrongs which justified the revolt from Great Britain, the climax of atrocity was deemed to be reached only when the English monarch was denounced as having "excited domestic insurrection among us."

The subject is to be viewed by us, therefore, solely in the light of policy and our social economy. When so regarded, I must dissent from those who advise a general levy and arming of the slaves for the duty of soldiers. Until our white population shall prove insufficient for the armies we require and can afford to keep in the field, to employ as a soldier the negro who has merely been trained to labor, and as a laborer the white man accustomed from his youth to the use of fire-arms, would scarcely be deemed wise or advantageous by any; and this is the question now before us. But should the alternative ever be presented of subjugation or of the employment of the slave as a soldier, there seems no reason to doubt what should then be our decision. Whether our view embraces what would, in so extreme a case, be the sum of misery entailed by the dominion of the enemy, or be restricted solely to the effect upon the welfare and happiness of the negro population themselves, the result would be the same. The appalling demoralization, suffering, disease, and death which have been caused by partially substituting the invaders' system of policy for the kind relation previously subsisting between the master and slave, have been a sufficient demonstration that external interference with our institution of domestic slavery is productive of evil only.

• If the subject involved no other consideration than the mere right of property, the sacrifices heretofore made by our people have been such as to permit no

doubt of their readiness to surrender every possession in order to secure their independence. But the social and political question which is exclusively under the control of the several States, has a far wider and more enduring importance than that of pecuniary interest. In its manifold phases it embraces the stability of republican institutions, resting on the actual political equality of all its citizens, and includes the fulfilment of the task which has been so happily begun—that of Christianizing and improving the condition of the Africans who have, by the will of Providence, been placed in our charge. Comparing the results of our experience with those of the experiments of others who have borne similar relations to the African race, the people of the several States of the Confederacy have abundant reason to be satisfied with the past, and to use the greatest circumspection in determining their course. These considerations, however, are rather applicable to the improbable contingency of our need of resorting to this element of resistance, than to our present condition. If the recommendations above made for the training of 40,000 negroes for the service indicated, shall meet your approval, it is certain that even this limited number, by their preparatory training in intermediate duties, would form a more valuable reserve force in case of urgency, than threefold their number suddenly called from field labor; while a fresh levy could, to a certain extent, supply their places in the special service for which they are now employed.

The regular annual reports of the Attorney-General, the Secretary of the Navy, and the Postmaster-General, are appended, and give ample information relative to the condition of the respective Departments. They contain suggestions for legislative provisions required to remedy such defects in the existing laws as have been disclosed by experience, but none of so general or important a character as to require that I should do more than recommend them to your favorable consideration.

The disposition of this Government for a peaceful solution of the issues which the enemy has referred to the arbitrament of arms, has been too often manifested, and is too well known to need new assurances. But, while it is true that individuals and parties in the United States have indicated a desire to substitute reason for force, and by negotiation to stop the further sacrifice of human life, and to arrest the calamities which now afflict both countries, the authorities who control the Government of our enemies have too often and too clearly expressed their resolution to make no peace except on terms of our unconditional submission and degradation, to leave us any hope of the cessation of hostilities until the delusion of their ability to conquer us is dispelled.

Among those who are already disposed for peace, many are actuated by principle and by disapproval and abhorrence of the iniquitous warfare that their Government is waging, while others are moved by the conviction that it is no longer to the interest of the United States to continue a struggle in which success is unattainable. Whenever this fast-growing conviction shall have taken firm root in the minds of a majority of the Northern people, there will be produced that willingness to negotiate for peace which is now confined to our side. Peace is manifestly impossible unless desired by both parties to this war, and the disposition for it among our enemies will be best and most certainly evoked by the demonstration on our part of ability and unshaken determination to defend our rights, and to hold no earthly price too dear for their purchase. Whenever there shall be on the part of our enemies a desire for peace, there will be no difficulty in finding means by which negotiations can be opened; but it is obvious that no agency can be called into action until this desire shall be mutual. When that contingency shall happen, the Government, to which is confided the treaty-making power, can be at no loss for means adapted to accomplish so desirable an end.

In the hope that the day will soon be reached, when, under Divine favor, these States may be allowed to enter on their former peaceful pursuits, and to develop the abundant natural resources with which they are blessed, let us then resolutely continue to devote our united and unimpaired energies to the defence of our homes, our lives, and our liberties. This is the true path to peace. Let us tread it with confidence in the assured result.

JEFFERSON DAVIS.

RICHMOND, November 7, 1864.

Report of resolutions adopted at a Conference of Delegates from the Provinces of Canada, Nova Scotia and New Brunswick, and the Colonies of Newfoundland and Prince Edward Island, held at the City of Quebec, 10th October, 1864, as the basis of a proposed Confederation of those Provinces and Colonies.

1. The best interests and present and future prosperity of British North America will be promoted by a Federal Union under the crown of Great Britain, provided such Union can be effected on principles just to the several Provinces.

2. In the Federation of the British North American Provinces, the system of Government best adapted under existing circumstances to protect the diversified interests of the several Provinces, and secure efficiency, harmony, and permanency in the working of the Union, would be a General Government charged with matters of common interest to the whole country, and local Governments for each of the Canadas, and for the Provinces of Nova Scotia, New Brunswick, and Prince Edward Island, charged with the control of local matters in their respective sections; provision being made for the admission into the Union on equitable terms of Newfoundland, the Northwest Territory, British Columbia, and Vancouver.

3. In framing a Constitution for the General Government, the Conference, with a view to the perpetuation of our connection with the mother country, and to the promotion of the best interests of the people of these Provinces, desire to follow the model of the British Constitution, so far as our circumstances will permit.

4. The executive authority or Government shall be vested in the Sovereign of the United Kingdom of Great Britain and Ireland, and be administered according to the well-understood principles of the British Constitution by the Sovereign personally, or by the Representative of the Sovereign duly authorized.

5. The Sovereign, or Representative of the Sovereign, shall be commander-in-chief of the land and naval militia forces.

6. There shall be a General Legislature or Parliament for the Federated Provinces, composed of a Legislative Council and a House of Commons.

7. For the purpose of forming the Legislative Council, the Federated Provinces shall be considered as consisting of three divisions: 1st, Upper Canada; 2d, Lower Canada; 3d, Nova Scotia, New Brunswick, and Prince Edward Island—each division with an equal representation in the Legislative Council.

8. Upper Canada shall be represented in the Legislative Council by twenty-four Members, Lower Canada by twenty-four Members, and the three Maritime Provinces by twenty-four Members, of which Nova Scotia shall have ten, New Brunswick ten, and Prince Edward Island four Members.

9. The Colony of Newfoundland shall be entitled to enter the proposed Union, with a Representation in the Legislative Council of four Members.

10. The Northwest Territory, British Columbia, and Vancouver, shall be admitted into the Union, on such terms and conditions as the Parliament of the Federated Provinces shall deem equitable, and as shall receive the assent of Her Majesty; and in

the case of the Province of British Columbia or Vancouver, as shall be agreed to by the Legislature of such Province.

11. The Members of the Legislative Council shall be appointed by the Crown, under the Great Seal of the General Government, and shall hold office during life. If any Legislative Councillor shall, for two consecutive sessions of Parliament, fail to give his attendance in the said Council, his seat shall thereby become vacant.

12. The Members of the Legislative Council shall be British subjects by birth or naturalization, of the full age of thirty years, shall possess a continuous real property qualification of four thousand dollars over and above all incumbrances, and shall be and continue worth that sum over and above their debts and liabilities; but in the case of Newfoundland and Prince Edward Island, the property may be either real or personal.

13. If any question shall arise as to the qualification of a Legislative Councillor, the same shall be determined by the Council.

14. The first selection of the Members of the Legislative Council shall be made, except as regards Prince Edward Island, from the Legislative Councils of the various Provinces, so far as a sufficient number be found qualified and willing to serve; such Members shall be appointed by the Crown, at the recommendation of the General Executive Government, upon the nomination of the respective local Governments, and in such nomination due regard shall be had to the claims of the Members of the Legislative Council of the opposition in each Province, so that all political parties may as nearly as possible be fairly represented.

15. The Speaker of the Legislative Council (unless otherwise provided by Parliament) shall be appointed by the Crown from among the Members of the Legislative Council, and shall hold office during pleasure, and shall only be entitled to a casting vote on an equality of votes.

16. Each of the twenty-four Legislative Councillors representing Lower Canada in the Legislative Council of the General Legislature, shall be appointed to represent one of the twenty-four Electoral Divisions mentioned in Schedule A, of Chapter first, of the Consolidated Statutes of Canada, and such Councillor shall reside or possess his qualification in the Division he is appointed to represent.

17. The basis of Representation in the House of Commons shall be population, as determined by the official census every ten years; and the number of Members at first shall be 194, distributed as follows:

Upper Canada,	83
Lower Canada,	65
Nova Scotia,	19
New Brunswick,	15
Newfoundland,	8
Prince Edward Island,	5

18. Until the official census of 1871 has been made up, there shall be no change in the number of Representatives from the several sections.

19. Immediately after the completion of the census of 1871, and immediately after every decennial census thereafter, the Representation from each section in the House of Commons shall be readjusted on the basis of population.

20. For the purpose of such readjustments, Lower Canada shall always be assigned sixty-five Members, and each of the other sections shall at each readjustment receive, for the ten years then next succeeding, the number of Members to which it will be entitled, on the same ratio of representation to population as Lower Canada will enjoy according to the census last taken, by having sixty-five Members.

21. No reduction shall be made in the number of Members returned by any section, unless its population shall have decreased relatively to the population of the whole Union, to the extent of five per centum.

22. In computing at each decennial period, the

number of Members to which each section is entitled, no fractional parts shall be considered, unless when exceeding one-half the number entitling to a Member, in which case a Member shall be given for each such fractional part.

23. The Legislature of each Province shall divide such Province into the proper number of constituencies, and define the boundaries of each of them.

24. The Local Legislature of each Province may, from time to time, alter the Electoral Districts for the purposes of Representation in such Local Legislature, and distribute the Representatives to which the Province is entitled, in any manner such Legislature may think fit.

25. The number of Members may at any time be increased by the General Parliament—regard being had to the proportionate rights then existing.

26. Until provisions are made by the General Parliament, all the laws which, at the date of the Proclamation constituting the Union, are in force in the Provinces respectively, relating to the qualification and disqualification of any person to be elected, or to sit or vote as a Member of the Assembly in the said Provinces respectively, and relating to the qualification or disqualification of voters, and to the oaths to be taken by voters, and to Returning Officers and their powers and duties, and relating to the proceedings at elections, and to the period during which such elections may be continued, and relating to the trial of controverted elections, and the proceedings incident thereto, and relating to the vacating of seats of Members, and to the issuing and execution of new writs in case of any seat being vacated otherwise than by a dissolution, shall respectively apply to elections of Members to serve in the House of Commons, for places situated in those Provinces respectively.

27. Every House of Commons shall continue for five years from the day of the return of the writs choosing the same, and no longer; subject, nevertheless, to be sooner prorogued or dissolved by the Governor.

28. There shall be a session of the General Parliament once at least in every year, so that a period of twelve calendar months shall not intervene between the last sitting of the General Parliament in one session, and the first sitting thereof in the next session.

29. The General Parliament shall have power to make laws for the peace, welfare, and good government of the Federated Provinces (saving the Sovereignty of England), and especially laws respecting the following subjects:

1. The public debt and property.
2. The regulation of trade and commerce.
3. The imposition or regulation of duties of customs on imports and exports, except on exports of timber, logs, masts, spars, deals, and sawn lumber, and of coal and other minerals.
4. The imposition or regulation of excise duties.
5. The raising of money by all or any other modes or systems of taxation.
6. The borrowing of money on the public credit.
7. Postal service.
8. Lines of steam or other ships, railways, canals, and others works, connecting any two or more of the Provinces together, or extending beyond the limits of any Province.
9. Lines of steamships between the Federated Provinces and other countries.
10. Telegraphic communication and the incorporation of telegraph companies.
11. All such works as shall, although lying wholly within any Province, be specially declared by the acts authorizing them to be for the general advantage.
12. The census.
13. Militia—military and naval service and defence.
14. Beacons, buoys, and light-houses.
15. Navigation and shipping.

16. Quarantine.

17. Sea coast and inland fisheries.

18. Ferries between any Province and a foreign country, or between any two Provinces.

19. Currency and coinage.

20. Banking, incorporation of banks, and the issue of paper money.

21. Savings banks.

22. Weights and measures.

23. Bills of exchange and promissory notes.

24. Interest.

25. Legal tender,

26. Bankruptcy and insolvency.

27. Patents of invention and discovery.

28. Copyrights.

29. Indians and lands reserved for the Indians.

30. Naturalization and aliens.

31. Marriage and divorce.

32. The criminal law, excepting the constitution of courts of criminal jurisdiction, but including the procedure in criminal matters.

33. Rendering uniform all or any of the laws relative to property and civil rights in Upper Canada, Nova Scotia, New Brunswick, Newfoundland, and Prince Edward Island, and rendering uniform the procedure of all or any of the courts in these Provinces; but any statute for this purpose shall have no force or authority in any Province until sanctioned by the Legislature thereof.

34. The establishment of a General Court of Appeal for the Federated Provinces.

35. Immigration.

36. Agriculture.

37. And generally respecting all matters of a general character, not specially and exclusively reserved for the Local Governments and Legislatures.

38. The General Government and Parliament shall have all powers necessary or proper for performing the obligations of the Federated Provinces, as part of the British Empire, to foreign countries, arising under treaties between Great Britain and such countries.

39. The General Parliament may also, from time to time, establish additional courts, and the General Government may appoint Judges and officers thereof, when the same shall appear necessary or for the public advantage, in order to the due execution of the laws of Parliament.

40. All Courts, Judges, and officers of the several Provinces, shall aid, assist, and obey the General Government in the exercise of its rights and powers, and for such purposes shall be held to be Courts, Judges, and officers of the General Government.

41. The General Government shall appoint and pay the Judges of the Superior Courts in each Province, and of the County Courts of Upper Canada, and Parliament shall fix their salaries.

42. Until the consolidation of the laws of Upper Canada, New Brunswick, Nova Scotia, Newfoundland, and Prince Edward Island, the Judges of these Provinces appointed by the General Government, shall be selected from their respective bars.

43. The Judges of the Courts of Lower Canada shall be selected from the bar of Lower Canada.

44. The Judges of the Court of Admiralty now receiving salaries shall be paid by the General Government.

45. The Judges of the Superior Courts shall hold their offices during good behavior, and shall be removable only on the address of both Houses of Parliament.

LOCAL GOVERNMENT.

46. For each of the Provinces there shall be an executive officer, styled the Lieutenant Governor, who shall be appointed by the Governor General in council, under the Great Seal of the Federated Provinces, during pleasure; such pleasure not to be exercised before the expiration of the first five years,

except for cause; such cause to be communicated in writing to the Lieutenant Governor immediately after the exercise of the pleasure as aforesaid, and also by message to both Houses of Parliament, within the first week of the first session afterwards.

39. The Lieutenant Governor of each Province shall be paid by the General Government.

40. In undertaking to pay the salaries of the Lieutenant Governors, the Conference does not desire to prejudice the claim of Prince Edward Island upon the Imperial Government, for the amount now paid for the salary of the Lieutenant Governor thereof.

41. The Local Government and Legislature of each Province shall be constructed in such manner as the existing Legislature of such Province shall provide.

42. The Local Legislatures shall have power to alter or amend their constitution from time to time.

43. The Local Legislatures shall have power to make laws respecting the following subjects:

1. Direct taxation and the imposition of duties on the export of timber, logs, masts, spars, deals, and sawn lumber, and of coals and other minerals.
2. Borrowing money on the credit of the Province.
3. The establishment and tenure of local offices, and the appointment and payment of local officers.
4. Agriculture.
5. Immigration.
6. Education; saving the rights and privileges which the Protestant or Catholic minority in both Canadas may possess as to their denominational schools, at the time when the Union goes into operation.
7. The sale and management of public lands, excepting lands belonging to the General Government.
8. Sea-coast and inland fisheries.
9. The establishment, maintenance, and management of Penitentiaries, and of public and reformatory prisons.
10. The establishment, maintenance, and management of hospitals, asylums, charities, and eleemosynary institutions.
11. Municipal institutions.
12. Shop, saloon, tavern, auctioneer, and other licenses.
13. Local works.
14. The incorporation of private or local companies, except such as relate to matters assigned to the General Parliament.
15. Property and civil rights, excepting those portions thereof assigned to the General Parliament.
16. Inflicting punishment by fine, penalties, imprisonment, or otherwise, for the breach of laws passed in relation to any subject within their jurisdiction.
17. The administration of justice, including the Constitution, maintenance, and organization of the courts—both of civil and criminal jurisdiction, and including also the procedure in civil matters.
18. And generally all matters of a private or local nature, not assigned to the General Parliament.

44. The power of respiting, reprieving, and pardoning prisoners convicted of crimes, and of commuting and remitting of sentences in whole or in part, which belongs of right to the Crown, shall be administered by the Lieutenant Governor of each Province in Council, subject to any instructions he may from time to time receive from the General Government, and subject to any provisions that may be made in this behalf by the General Parliament.

MISCELLANEOUS.

45. In regard to all subjects over which jurisdiction belongs to both the General and Local Legislatures, the laws of the General Parliament shall control and

supersede those made by the Local Legislature, and the latter shall be void so far as they are repugnant to or inconsistent with the former.

46. Both the English and French languages may be employed in the General Parliament and in its proceedings, and in the Local Legislature of Lower Canada, and also in the Federal Courts and in the Courts of Lower Canada.

47. No lands or property belonging to the General or Local Government shall be liable to taxation.

48. All bills for appropriating any part of the public revenue, or for imposing any new tax or impost, shall originate in the House of Commons or the House of Assembly, as the case may be.

49. The House of Commons or House of Assembly shall not originate or pass any vote, resolution, address or bill for the appropriation of any part of the public revenue, or of any tax or impost to any purpose, not first recommended by Message of the Governor General, or the Lieutenant Governor, as the case may be, during the session in which such vote, resolution, address or bill is passed.

50. Any bill of the General Parliament may be reserved in the usual manner for Her Majesty's assent, and any bill of the Local Legislatures may in like manner be reserved for the consideration of the Governor General.

51. Any bill passed by the General Parliament shall be subject to disallowance by Her Majesty within two years, as in the case of bills passed by the Legislatures of the said Provinces hitherto, and in like manner any bill passed by a Local Legislature shall be subject to disallowance by the Governor General within one year after the passing thereof.

52. The seat of Government of the Federated Provinces shall be Ottawa, subject to the royal prerogative.

53. Subject to any future action of the respective Local Governments, the seat of the Local Government in Upper Canada shall be Toronto; of Lower Canada, Quebec; and the seats of the Local Governments in the other Provinces shall be as at present.

PROPERTY AND LIABILITIES.

54. All stocks, cash, bankers' balances and securities for money belonging to each Province, at the time of the Union, except as hereinafter mentioned, shall belong to the General Government.

55. The following public works and property of each Province, shall belong to the General Government—to wit:

1. Canals;
2. Public harbors;
3. Light houses and piers;
4. Steamboats, dredges, and public vessels;
5. River and lake improvements;
6. Railway and railway stocks, mortgages and other debts due by railway companies;
7. Military roads;
8. Custom houses, post offices and other public buildings, except such as may be set aside by the General Government for the use of the Local Legislatures and Governments;
9. Property transferred by the Imperial Government and known as ordnance property;
10. Armouries, drill sheds, military clothing and munitions of war; and
11. Lands set apart for public purposes.

56. All lands, mines, minerals, and royalties vested in Her Majesty in the Provinces of Upper Canada, Lower Canada, Nova Scotia, New Brunswick, and Prince Edward Island, for the use of such Provinces, shall belong to the Local Government of the territory in which the same are so situate; subject to any trusts that may exist in respect to any of such lands or to any interest of other persons in respect of the same.

57. All sums due from purchasers or lessees of such lands, mines, or minerals at the time of the Union, shall also belong to the Local Governments.

58. All assets connected with such portions of the

public debt of any Province as are assumed by the Local Governments, shall also belong to those Governments respectively.

59. The several Provinces shall retain all other public property therein, subject to the right of the General Government to assume any lands or public property required for fortifications or the defence of the country.

60. The General Government shall assume all the debts and liabilities of each Province.

61. The debt of Canada not specially assumed by Upper and Lower Canada respectively, shall not exceed at the time of the Union, \$82,500,000.

Nova Scotia shall enter the Union with a debt not exceeding \$8,000,000.

And New Brunswick, with a debt not exceeding \$7,000,000.

62. In case Nova Scotia or New Brunswick do not incur liabilities beyond those for which their Governments are now bound and which shall make their debts at the date of Union less than \$8,000,000 and \$7,000,000 respectively, they shall be entitled to interest at 5 per cent. on the amount not so incurred, in like manner as is hereinafter provided for Newfoundland and Prince Edward Island; the foregoing resolution being in no respect intended to limit the powers given to the respective Governments of those Provinces by legislative authority, but only to limit the maximum amount of charge to be assumed by the General Government. Provided always that the powers so conferred by the respective legislatures shall be exercised within five years from this date or the same shall then lapse.

63. Newfoundland and Prince Edward Island, not having incurred debts equal to those of the other Provinces, shall be entitled to receive by half-yearly payments in advance from the General Government the interest at 5 per cent. on the difference between the actual amount of their respective debts at the time of the Union, and the average amount of indebtedness per head of the population of Canada, Nova Scotia, and New Brunswick.

64. In consideration of the transfer to the General Parliament of the powers of taxation, an annual grant in aid of each Province shall be made, equal to 80 cents per head of the population, as established by the census of 1861, the population of Newfoundland being estimated at 180,000. Such aid shall be in full settlement of all future demands upon the General Government for local purposes, and shall be paid half-yearly in advance to each Province.

65. The position of New Brunswick being such as to entail large immediate charges upon her local revenues, it is agreed that for the period of ten years from the time when the Union takes effect, an additional allowance of \$68,000 per annum shall be made to that Province. But that so long as the liability of that Province remains under \$7,000,000, a deduction equal to the interest on such deficiency shall be made from the \$68,000.

66. In consideration of the surrender to the General Government by Newfoundland of all rights in mines and minerals, and of all the ungranted and unoccupied lands of the crown, it is agreed that the sum of \$150,000 shall each year be paid to that Province, by semi-annual payments. Provided that that Colony shall retain the right of opening, constructing, and controlling roads and bridges through any of the said lands, subject to any laws which the General Parliament may pass in respect of the same.

67. All engagements that may, before the Union, be entered into with the Imperial Government for the defence of the country shall be assumed by the General Government.

68. The General Government shall secure, without delay, the completion of the intercolonial railway from Rivière-du-Loup through New Brunswick to Truro in Nova Scotia.

69. The communications with the northwestern

territory, and the improvements required for the development of the trade of the Great West with the Seaboard, are regarded by this conference as subjects of the highest importance to the Federated Provinces, and shall be prosecuted at the earliest possible period that the state of the finances will permit.

70. The sanction of the Imperial and Local Parliaments shall be sought for the Union of the Provinces, on the principles adopted by the conference.

71. That Her Majesty the Queen be solicited to determine the rank and name of the Federated Provinces.

72. The proceedings of the conference shall be authenticated by the signatures of the delegates, and submitted by each delegation to its own government, and the chairman is authorized to submit a copy to the Governor General for transmission to the Secretary of State for the Colonies.

The Encyclical Letter of Pope Pius IX.

TO OUR VENERABLE BROTHERS, THE PATRIARCHS, PRIMATEs, ARCHBISHOPS, AND BISHOPS OF THE UNIVERSAL CHURCH HAVING GRACE AND COMMUNION OF THE APOSTOLIC SEE.

PIUS P. P. IX.

Health and Apostolic Benediction.

It is well-known unto all men, and especially to You, Venerable Brothers, with what great care and pastoral vigilance Our Predecessors, the Roman Pontiffs, have discharged the Office entrusted by Christ Our Lord to them in the person of the Most Blessed Peter, Prince of the Apostles, and have unremittingly discharged the duty of feeding the lambs and sheep, and have diligently nourished the Lord's entire flock with the words of faith, imbued it with salutary doctrine, and guarded it from poisoned pastures. And those Our Predecessors, who were the assertors and champions of the august Catholic Religion, truth and justice, being as they were chiefly solicitous for the salvation of souls, held nothing to be of so great importance as the duty of exposing and condemning, in their most wise Letters and Constitutions, all heresies and errors which are hostile to moral honesty and to the eternal salvation of mankind, and which have frequently stirred up terrible commotions and have damaged both the Christian and civil commonwealths in a disastrous manner. Wherefore those Our Predecessors have with Apostolic fortitude continually resisted the nefarious attempts of unjust men, of those who like raging waves of the sea foaming forth their own confusion and promising liberty whilst they are the slaves of corruption, endeavored by their false opinions and most pernicious writings to overthrow the foundations of the Catholic religion and of civil society, to abolish all virtue and justice, to deprave the souls and minds of all men, and especially to pervert inexperienced youth from uprightness of morals to corrupt them miserably, to lead them into snares of error, and finally to tear them from the bosom of the Catholic Church.

And now, Venerable Brothers, as is also very well known to you—scarcely had We (by the secret dispensation of Divine Providence, certainly by no merit of Our own) been called to this Chair of Peter when We, to the extreme grief of Our soul, beheld a horrible tempest stirred up by so many erroneous opinions, and the dreadful, and never-enough-to-be lamented mischiefs which redound to Christian people from such errors: and We then, in discharge of Our Apostolic Ministerial Office, imitating the example of Our illustrious Predecessors, raised Our voice, and in several published Encyclical Letters, and in Allocutions delivered in Consistory, and in other Apostolical Letters, We condemned the prominent, most grievous errors of the age, and we stirred up Your excellent episcopal vigilance, and again and again did We admonish and exhort all the sons of the Catholic Church who are most dear to Us, that

they should abhor and shun all the said errors as they would the contagion of a fatal pestilence. Especially in Our first Encyclical Letter, written to You on the 9th of November, *anno* 1846, and in two Allocutions, one of which was delivered by Us in Consistory on the 9th of December, *anno* 1854, and the other on the 9th of June, *anno* 1863, We condemned the monstrous and portentous opinions which prevail especially in the present age to the very great loss of souls, and even to the detriment of civil society; and which are in the highest degree hostile not only to the Catholic Church, and to her salutary doctrine and venerable laws, but also to the everlasting law of nature engraven by God upon the hearts of all men, and to right reason; and out of which almost all other errors originate.

Now although hitherto We have not omitted to denounce and reprove the chief errors of this kind, yet the cause of the Catholic Church and the salvation of souls committed to Us by God, and even the interests of human society absolutely demand, that once again We should stir up Your pastoral solicitude to drive away other erroneous opinions which flow from those errors above specified, as their source. These false and perverse opinions are so much the more detestable by how much they have chiefly for their object to hinder and banish that salutary influence which the Catholic Church, by the institution and command of her Divine Author, ought freely to exercise, even to the consummation of the world, not only over individual men but nations, peoples, and sovereigns—and to abolish that mutual coöperation and agreement of counsels between the Priesthood and Governments which has always been propitious and conducive to the welfare both of Church and State. (Gregory XVI. Encyclical, 13th August, 1832.) You are well aware that at this time, there are not a few who apply to civil society the impious and absurd principle of *naturalism*, as they term it, and dare to teach that "the welfare of the State and political and social progress require that human society should be constituted and governed irrespective of religion, which is to be treated just as if it did not exist, or as if no real difference existed between true and false religions." Contrary to the teaching of the Holy Scriptures, of the Church, and of the Holy Fathers, these persons do not hesitate to assert that "the best condition of human society is that wherein no duty is recognized by the Government of correcting by enacted penalties the violators of the Catholic Religion, except when the maintenance of the public peace requires it." From this totally false notion of social government, they fear not to uphold that erroneous opinion most pernicious to the Catholic Church, and to the salvation of souls, which was called by Our Predecessor Gregory XVI. (lately quoted) the insanity (Encycl. 18 August, 1832) (deliramentum), namely, that "liberty of conscience and of worship is the right of every man; and that this right ought, in every well-governed State, to be proclaimed and asserted by the law; and that the citizens possess the right of being unrestrained in the exercise of every kind of liberty, by any law, ecclesiastical or civil, so that they are authorized to publish and put forward openly, all their ideas whatsoever, either by speaking, in print, or by any other method." But whilst these men make these rash assertions, they do not reflect, or consider that they preach the liberty of perdition (St. Augustine, Epistle 106, al. 168), and that, "if it is always free to human arguments to discuss, men will never be wanting who will dare to resist the truth, and to rely upon the loquacity of human wisdom, when we know from the command of Our Lord Jesus Christ how faith and Christian wisdom ought to avoid this most mischievous vanity." (St. Leo, Epistle 164, al. 133, sec. 2, Boll. ed.).

And since religion has been banished from civil Government; since the teaching and authority of Divine revelation have been repudiated, the idea in-

separable therefrom of justice and human right as obscured by darkness and lost, and in place of true justice and legitimate right material force is substituted, whence it appears why some, entirely neglecting and slighting the most certain principles of sound reason, dare to proclaim "that the will of the people, manifested by public opinion (as they call it), or by other means, constitutes a supreme law independent of all Divine and human right; and that, in the political order, accomplished facts, by the mere fact of their having been accomplished, have the force of right." But who does not plainly see and understand that human society, released from the ties of religion and true justice, can have no other purpose than to compass its own ends, and to amass riches, and can follow no other law in its actions than the indomitable wickedness of a heart given up to the service of its selfish pleasures and interests? For this reason also these same men persecute with such bitter hatred the Religious Orders who have deserved so well of religion, civil society, and letters; they loudly declare that the Orders have no right to exist, and, in so doing, make common cause with the falsehoods of the heretics. For, as was most wisely taught by Our Predecessor of illustrious memory, Pius VI., "the abolition of Religious Orders injures the state of public profession of the Evangelical counsels; injures a mode of life recommended by the Church as in conformity with Apostolic doctrine; does wrong to the illustrious founders whom we venerate upon our altars, and who constituted these societies under the inspiration of God." (Epistle to Cardinal de la Rochefoucauld, March 10, 1791.) And these same persons also impiously pretend that citizens should be deprived of the liberty of publicly bestowing on the Church their alms for the sake of Christian charity, and that the law forbidding "servile labor on account of Divine worship" upon certain fixed days should be abolished upon the most fallacious pretext that such liberty and such law are contrary to the principles of political economy. Not content with abolishing religion in public society, they desire farther to banish it from families and private life. Teaching and professing those most fatal errors of Socialism and Communism, they declare that "domestic society or the family derives all its reason of existence solely from civil law, whence it is to be concluded that from civil law descend and depend all the rights of parents over their children, and, above all, the right of instructing and educating them." By such impious opinions and machinations do these most false teachers endeavor to eliminate the salutary teaching and influence of the Catholic Church from the instruction and education of youth, and to miserably infect and deprave by every pernicious error and vice the tender and pliant minds of youth. All those who endeavor to throw into confusion both religious and political affairs, to destroy the good order of society, and to annihilate all Divine and human rights, have always exerted all their criminal schemes, attention, and efforts upon the manner in which they might, above all, deprave and delude unthinking youth, as We have already shown: it is upon the corruption of youth that they place all their hopes. Thus they never cease to attack by every method the Clergy, both secular and regular, from whom, as testify to us in so conspicuous a manner the most certain records of history, such considerable benefits have been bestowed in abundance upon Christian and Civil society and upon the republic of letters; asserting of the Clergy in general, that they are the enemies of the useful sciences, of progress, and of civilization, and that they ought to be deprived of all participation in the work of teaching and training the young.

Others, reviving the depraving fictions of innovators, errors many times condemned, presume with extraordinary impudence, to subordinate the authority of the Church and of this Apostolic See, conferred upon it by Christ Our Lord, to the judgment of civil

authority, and to deny all the rights of this same Church and this See with regard to those things which appertain to the secular order. For these persons do not blush to affirm "that the laws of the Church do not bind the conscience if they are not promulgated by the civil power; that the acts and decrees of the Roman Pontiffs concerning religion and the Church require the sanction and approbation, or at least, the assent of the civil power; and that the Apostolic Constitutions (Clement XII., Benedict XIV., Pius VII., Leo XII.) condemning secret societies, whether these exact or do not exact an oath of secrecy, and branding with anathema their followers and partisans, have no force in those countries of the world where such associations are tolerated by the civil government." It is likewise affirmed "that the excommunications launched by the Council of Trent and the Roman Pontiffs against those who invade and usurp the possessions of the Church and its rights, strive, by confounding the spiritual and temporal orders to attain solely a mere earthly end; that the Church can decide nothing which may bind the consciences of the faithful in the temporal order of things; that the right of the Church is not competent to restrain with temporal penalties the violators of her laws; and that it is in accordance with the principles of theology and of public law for the civil Government to appropriate property possessed by the churches, the Religious Orders, and other pious establishments." And they have no shame in avowing openly and publicly the heretical statement and principle from which has emanated so many errors and perverse opinions, "that the ecclesiastical power is not by the law of God made distinct from and independent of civil power, and that no distinction, no independence of this kind can be maintained without the Church invading and usurping the essential rights of the civil power." Neither can We pass over in silence the audacity of those who, not enduring sound doctrine, assert that "the judgments and decrees of the Holy See, the object of which is declared to concern the general welfare of the Church, its rights, and its discipline; do not claim acquiescence and obedience under pain of sin and loss of the Catholic profession, if they do not treat of the dogmas of faith and of morals."

How contrary is this doctrine to the Catholic dogma of the plenary power divinely conferred on the Sovereign Pontiff by Our Lord Jesus Christ, to guide, to supervise, and govern the Universal Church, no one can fail to see and understand clearly and evidently.

Amid so great a perversity of depraved opinions, We, remembering Our Apostolic duty, and solicitous before all things for Our most holy religion, for sound doctrine, for the salvation of the souls confided to Us, and for the welfare of human society itself, have considered the moment opportune to raise anew Our Apostolic voice. Therefore do We by Our Apostolic authority reprobate, denounce, and condemn generally and particularly all the evil opinions and doctrines specially mentioned in this Letter, and We wish that they may be held as reprobated, denounced and condemned by all the children of the Catholic Church.

But you know further, Venerable Brothers, that in our time the haters of all truth and justice and violent enemies of our religion have spread abroad other impious doctrines by means of pestilent books, pamphlets, and journals, which, distributed over the service of the earth, deceive the people and wickedly lie. You are not ignorant that in our day men are found who, animated and excited by the spirit of Satan, have arrived at that excess of impiety as not to fear to deny Our Lord and Master Jesus Christ, and to attack His Divinity with scandalous persistence. And here We cannot abstain from awarding You well-merited praise, Venerable Brothers, for all the care and zeal with which You have raised Your episcopal voice against so great an impiety.

And therefore in this present letter, We speak to You with all affection; to You who, called to partake Our cares, are Our greatest support in the midst of Our very great grief, Our joy and Our consolation, by reason of the excellent piety of which You give proof in maintaining religion, and the marvellous love, faith, and discipline with which, united by the strongest and most affectionate ties to Us and this Apostolic See, You strive valiantly and accurately to fulfil Your most weighty episcopal ministry. We do then expect from Your excellent pastoral zeal that, taking the sword of the Spirit, which is the Word of God, and strengthened by the grace of Our Lord Jesus Christ, You will watch with redoubled care, that the faithful committed to Your charge "abstain from evil pasture, which Jesus Christ doth not till, because His Father hath not planted it." (St. Ignac. M. ad Philadelph. St. Leo, Epist. 156, al. 126.) Never cease, then, to inculcate on the faithful that all true happiness for mankind proceeds from our august religion, from its doctrines and practice, and that that people is happy who have the Lord for their God (Psalm 143). Teach them "that kingdoms rest upon the foundation of the Catholic faith (St. Celest. Epist. 22, ad Syn. Eph.), and that nothing is so deadly, nothing so certain to engender every ill, nothing so exposed to danger as for men to believe that they stand in need of nothing else than the free will which we received at birth, if we ask nothing further from the Lord—that is to say, if forgetting our Author, we abjure His power to show that we are free." And do not omit to teach "that the Royal power has been established not only to exercise the government of the world, but, above all, for the protection of the Church (St. Leo, Epist., 156 al. 126), and that there is nothing more profitable and more glorious for the Sovereigns of States and Kings than to leave the Catholic Church to exercise its laws, and not to permit any to curtail its liberty;" as Our most wise and courageous Predecessor, St. Felix, wrote to the Emperor Zeno. "It is certain that it is advantageous for Sovereigns, when the cause of God is in question, to submit their Royal will according to His ordinance, to the Priests of Jesus Christ, and not to prefer it before them." (Pius VII. Epist., Encycl., *Divi satie*, 15th May, 1800.)

And if always, so, especially at present, is it Our duty, Venerable Brothers, in the midst of the numerous calamities of the Church and of civil society in view of the terrible conspiracy of our adversaries against the Catholic Church and this Apostolic See, and the great accumulation of errors, it is before all things necessary to go with faith to the Throne of Grace to obtain mercy and find grace in timely aid. We have therefore judged it right to excite the piety of all the faithful in order that, with Us and with You all, they may pray without ceasing to the Father of lights and of mercies, supplicating and beseeching Him fervently and humbly, in order also in the plenitude of their faith they may seek refuge in Our Lord Jesus Christ who has redeemed us to God with His blood, that by their earnest and continual prayers, they may obtain from that most dear Heart, victim of burning charity for us, that it would draw all by the bonds of His love, and that all men being inflamed by His holy love may live according to His heart, pleasing God in all things, and being fruitful in all good works.

But, as there is no doubt that the prayers most agreeable to God are those of the men who approach Him with a heart pure from all stain, We have thought it good to open to Christians, with Apostolic liberality, the Heavenly treasures of the Church confided to Our dispensation, so that the faithful, more strongly drawn towards true piety and purified from the stain of their sins by the Sacrament of Penance, may more confidently offer up their prayers to God and obtain His mercy and grace.

By these Letters emanating from Our Apostolic authority, We grant to all and each of the faithful

of both sexes throughout the Catholic world a Plenary Indulgence in the manner of a Jubilee, during one month, up to the end of the coming year 1865, and not longer, to be carried into effect by You, Venerable Brethren, and the other legitimate local Ordinaries, in the form and manner laid down at the commencement of Our Sovereign Pontificate by Our Apostolical Letters, in form of a Brief, dated the 20th of November, anno 1846, and sent to the whole Episcopate of the world, commencing with the words, "*Arcano Divina Providentia consilio*," and with the faculties given by Us in those same Letters. We desire, however, that all the prescriptions of Our Letters shall be observed, saving the exceptions We have declared are to be made. And We have granted this, notwithstanding all which might make to the contrary, even those worthy of special and individual mention and derogation; and in order that every doubt and difficulty may be removed, We have ordered that copies of those Letters should be again forwarded to You.

"Let us implore, Venerable Brethren, from our inmost hearts, and with all our souls, the mercy of God. He has encouraged us so to do, by saying: 'I will not withdraw my mercy from them.' Let us ask and we shall receive; and if there is slowness or delay in its reception, because we have grievously offended, let us knock, because to him that knocketh it shall be opened; if our prayers, groans, and tears, in which we must persist and be obstinate, knock at the door; and if our prayer be united; let each one pray to God, not for himself alone, but for all his brethren, as the Lord hath taught us to pray." (St. Cyprian, Epistle 11.) But, in order that God may accede more easily to Our and Your prayers, and to those of all His faithful servants, let us employ in all confidence as our Mediatrix with him the Virgin Mary, Mother of God, who "has destroyed all heresies throughout the world, and who, the most loving Mother of us all, is very gracious . . . and full of mercy . . . allows herself to be entreated by all, shows herself most clement towards all, and takes under her pitying care all our necessities with a most ample affection" (St. Bernard, *Serm. de duodecim perogatiis B. M. V., in verbis Apocalyp.*), and who, "sitting as queen upon the right hand of her only begotten Son Our Lord Jesus Christ in a golden vestment clothed around with various adornments," there is nothing which she cannot obtain from Him. Let us implore also the intervention of the Blessed Peter, Chief of the Apostles, and of his co-Apostle Paul, and of all those Saints of Heaven, who, having already become the friends of God, have been admitted into the celestial kingdom, where they are crowned and bear palms, and who henceforth certain of their own immortality, are solicitous for our salvation.

In conclusion, We ask of God from Our inmost soul the abundance of all His celestial benefits for You, and We bestow upon You, Venerable Brethren, and upon all faithful Clergy, and Laity committed to Your care, Our Apostolic Benediction from the most loving depths of Our heart, in token of Our charity towards you.

PIUS PP. IX.

Given at Rome from St. Peter's, this 8th of December, 1864, the tenth anniversary of the Dogmatic Definition of the Immaculate Conception of the Virgin Mary, Mother of God, in the nineteenth year of Our Pontificate.

THE SYLLABUS OF THE PRINCIPAL ERRORS OF OUR TIME, WHICH ARE STIGMATIZED IN THE CONSISTORIAL ALLOCUTIONS, ENCYCLICAL, AND OTHER APOSTOLICAL LETTERS OF OUR MOST HOLY FATHER, POPE PIUS IX.

I. Pantheism, Naturalism, and Absolute Rationalism.

1. There exists no Divine Power, Supreme Being, Wisdom, and Providence distinct from the universe, and God is none other than nature, and is therefore mutable. In effect, God is produced in man and in

the world, and all things are God, and have the very substance of God. God is therefore one and the same thing with the world, and thence spirit is the same thing with matter, necessity with liberty, true with false, good with evil, justice with injustice. (Allocution *Maxima quidem*, 9th June, 1862.)

2. All action of God upon man and the world is to be denied. (Allocution *Maxima quidem*, 9th June, 1862.)

3. Human reason, without any regard to God, is the sole arbiter of truth and falsehood, of good and evil; it is its own law to itself, and suffices by its natural force to secure the welfare of men and of nations. (Allocution *Maxima quidem*, 9th June, 1862.)

4. All the truths of religion are derived from the native strength of human reason; whence reason is the master rule by which man can and ought to arrive at the knowledge of all truths of every kind. (Encyclical letters, *Qui pluribus*, 9th November, 1846, *Singulari quidem*, 17th March, 1858, and the Allocution *Maxima quidem*, 9th June, 1862.)

5. Divine revelation is imperfect, and, therefore, subject to a continual and indefinite progress, which corresponds with the progress of human reason. (Encyclical *Qui pluribus*, 9th November, 1846, and the Allocution *Maxima quidem*, 9th June, 1862.)

6. Christian faith is in opposition to human reason, and divine revelation not only does not benefit, but even injures the perfection of man. (Encyclical *Qui pluribus*, 9th November, 1846, and the Allocution *Maxima quidem*, 9th June, 1862.)

7. The prophecies and miracles, uttered and narrated in the Sacred Scriptures, are the fictions of poets; and the mysteries of the Christian faith, the result of philosophical investigations. In the books of the two Testaments there are contained mythical inventions, and Jesus Christ is Himself a mythical fiction. (Encyclical *Qui pluribus*, 9th November, 1846, and the Allocution *Maxima quidem*, 9th June, 1862.)

II. Moderate Rationalism.

8. As human reason is placed on a level with Religion, so theological matters must be treated in the same manner as philosophical ones. (Allocution *Singulari quidem perfusi*, 9th December, 1854.)

9. All the dogmas of the Christian Religion are, without exception, the object of natural science or philosophy, and human reason, instructed solely by history, is able, by its own natural strength and principles, to arrive at the true knowledge of even the most abstruse dogmas: provided such dogmas be proposed as subject matter for human reason. (Letter ad *Archiep. Frising.* *Gravissimas*, 11th December, 1863 —to the same, *Tuas libenter*, 21st December, 1863.)

10. As the philosopher is one thing, and philosophy is another, so it is the right and duty of the philosopher to submit himself to the authority which he shall have recognized as true; but philosophy neither can nor ought to submit to any authority. (Letter ad *Archiep. Frising.* *Gravissimas*, 11th December, 1863 —to the same, *Tuas libenter*, 21st December, 1863.)

11. The Church not only ought never to animadvert upon philosophy, but ought to tolerate the errors of philosophy, leaving to philosophy the care of their correction. (Letter ad *Archiep. Frising.* 11th December, 1862.)

12. The decrees of the Apostolic See and of the Roman Congregation fetter the free progress of science. (Id. *Ibid.*)

13. The method and principles by which the old scholastic Doctors cultivated theology, are no longer suitable to the demands of the age and the progress of science. (Id. *Tuas libenter*, 21st December, 1863.)

14. Philosophy must be treated of without any account being taken of supernatural revelation. (Id. *Ibid.*)

N. B. To the rationalistic system belong, in great part, the errors of Anthony Gunther, condemned in the letter to the Cardinal Archbishop of Cologne, "*Eximiam tuam*," June 16, 1847; and in that to the Bishop of Breslau, "*Dolors haud mediocri*," April 30, 1860.

III. *Indifferentism, Latitudinarianism.*

15. Every man is free to embrace and profess the religion he shall believe true, guided by the light of reason. (Apostolic Letters, *Multiplies inter*, 10th June, 1851. (Allocution *Maxima quidem*, 9th June, 1852.)

16. Men may in any religion find the way of eternal salvation, and obtain eternal salvation. (Encyclical letter, *Qui pluribus*, 9th November, 1846. Allocution, *Ubi primum*, 17th December, 1847. Encyclical letter, *Singulari quidem*, 17th March, 1856.)

17. We may entertain at least a well-founded hope for the eternal salvation of all those who are in no manner in the true Church of Christ. (Allocution *Singulari quidem*, 9th December, 1854. Encyclical letter, *Quanto conficiamur*, 17th August, 1863.)

18. Protestantism is nothing more than another form of the same true Christian Religion, in which it is possible to be equally pleasing to God as in the Catholic Church. (Encyclical letter, *Noscit et nobiscum*, 8th December, 1849.)

IV. *Socialism, Communism, Secret Societies, Biblical Societies, Clerico-Liberal Societies.*

Pests of this description are frequently rebuked in the severest terms in the Encyc. *Qui pluribus*, Nov. 9, 1846; Alloc. *Quibus quantisque*, April 20, 1849; Encyc. *Noscit et Nobiscum*, Dec. 8, 1849; Alloc. *Singulari quidem*, Dec. 9, 1854; Encyc. *Quanto conficiamur* *maioris*, Aug. 10, 1863.

V. *Errors concerning the Church and her Rights.*

19. The Church is not a true, and perfect, and entirely free society, nor does she enjoy peculiar and perpetual rights conferred upon her by her Divine Founder, but it appertains to the civil power to define what are the rights and limits with which the Church may exercise authority. (Allocution *Singulari quidem*, 9th December, 1854, *Multis gravibusque*, 17th December, 1860, *Maxima quidem*, 9th June, 1862.)

20. The ecclesiastical power must not exercise its authority without the permission and assent of the civil Government. (Allocution, *Meminit unusquisque*, 30th September, 1861.)

21. The Church has not the power of defining dogmatically, that the Religion of the Catholic Church is the only true Religion. (Apostolic Letters, *Multiplies inter*, 10th June, 1851.)

22. The obligation which binds Catholic teachers and authors applies only to those things which are proposed for universal belief as dogmas of the faith, by the infallible judgment of the Church. (Letters *ad Archiep. Friessing.* Tuas libenter, 21st Dec., 1868.)

23. The Roman Pontiffs and Ecumenical Councils have exceeded the limits of their power, have usurped the rights of Princes, and have even committed errors in defining matters of faith and morals. (Apost. Letter, *Multiplies inter*, 10th June, 1851.)

24. The Church has not the power of availing herself of force, or any direct or indirect temporal power. (Letter Apost. *Ad Apostolicam*, 22d Aug., 1851.)

25. In addition to the authority inherent in the Episcopate, a further and temporal power is granted to it by the civil authority, either expressly or tacitly, which power is on that account also revocable by the civil authority whenever it pleases. (Letter Apost. *Ad Apostolicam*, 22d Aug., 1851.)

26. The Church has not the innate and legitimate right of acquisition and possession. (Allocution *Nunquam fore*, 15th Dec., 1856. Encyclical *Incredibili*, 17th Sept., 1863.)

27. The ministers of the Church and the Roman Pontiff ought to be absolutely excluded from all charge and dominion over temporal affairs. (Allocution *Maxima quidem*, 9th June, 1862.)

28. Bishops have not the right of promulgating even their Apostolical letters, without the permission of the Government. (Allocution *Nunquam fore*, 15th December, 1856.)

29. Dispensations granted by the Roman Pontiff must be considered null, unless they have been asked for by the civil Government. (Id. *Ibid.*)

30. The immunity of the Church and of ecclesiastical persons derives its origin from civil law. (Apost. *Multiplies inter*, 10th June, 1851.)

31. Ecclesiastical Courts for the temporal causes, of the clergy, whether civil or criminal, ought by all means to be abolished, even without the concurrence and against the protest of the Holy See. (Allocution *Acerbissimum*, 27th September, 1852. And. *Nunquam fore*, 15th December, 1856.)

32. The personal immunity exonerating the clergy from military service may be abolished, without violation either of natural right or of equity. Its abolition is called for by civil progress, especially in a community constituted upon principles of Liberal Government. (Letter to the Archbishop of Montreal, *Singulari nobisque*, 29th September, 1864.)

33. It does not appertain exclusively to ecclesiastical jurisdiction, by any right, proper and inherent, to direct the teaching of theological subjects. (Letter *ad Archiep. Friessing.* Tuas libenter, 21st December, 1863.)

34. The teaching of those, who compare the Sovereign Pontiff to a free Sovereign acting in the Universal Church, is a doctrine which prevailed in the Middle Ages. (Letter Apost. *Ad Apostolicam*, 22d August, 1851.)

35. There would be no obstacle to the sentence of a General Council, or the act of all the universal peoples, transferring the Pontifical Sovereignty from the Bishop and city of Rome to some other bishopric and some other city. (Id. *Ibid.*)

36. The definition of a National Council does not admit of any subsequent discussion, and the civil power can regard as settled an affair decided by such National Council. (Id. *Ibid.*)

37. National Churches can be established, after being withdrawn and plainly separated from the authority of the Roman Pontiff. (Allocution *Multis gravibusque*, 17th December, 1860. *Jam dudum cernimus*, 18th March, 1861.)

38. Roman Pontiffs have, by their too arbitrary conduct, contributed to the division of the Church into Eastern and Western. (Letter Apost. *Ad Apostolicam*, 22d August, 1851.)

VI. *Errors about Civil Society, considered both in itself and in its Relation to the Church.*

39. The Republic is the origin and source of all rights, and possesses rights which are not circumscribed by any limits. (Allocution *Maxima quidem*, 9th June, 1852.)

40. The teaching of the Catholic Church is opposed to the well-being and interests of society. (Encyclical *Qui pluribus*, 9th November, 1846. Allocution *Quibus quantisque*, 20th April, 1849.)

41. The Civil power, even when exercised by an infidel Sovereign, possesses an indirect and negative power over religious affairs. It therefore possesses not only the right called that of *exequatur*, but that of the (so-called) *appellatio ab abusu*.* (Apostolic Letter, *Ad Apostolicam*, 22d August, 1861.)

42. In the case of conflicting laws between the two Powers, the civil law ought to prevail. (Letter Apost. *Ad Apostolicam*, 22d August, 1851.)

43. The civil power has a right to break, and to declare and render null the conventions (commonly called Concordats) concluded with the Apostolic See, relative to the use of rights appertaining to the ecclesiastical immunity, without the consent of the Holy See, and even contrary to its protest. (Allocution in consistoriali, 1st November, 1850. *Multis gravibusque*, 17th December, 1860.)

44. The civil authority may interfere in matters relating to Religion, morality, and spiritual government. Hence it has control over the instructions for the guidance of consciences issued, conformably with their mission, by the Pastors of the Church. Further, it possesses power to decree, in the matter of admin-

* The power of authorizing official acts of the Papal power, and of correcting the alleged abuses of the same.

istering the divine Sacraments, as to the dispositions necessary for their reception. (Allocation In Consistoriali, 1st November, 1860. Allocation Maxima quidem, 9th June, 1862.)

45. The entire direction of public schools, in which the youth of Christian States are educated, except (to a certain extent) in the case of Episcopal Seminaries, may and must appertain to the civil power, and belong to it so far, that no other authority whatsoever shall be recognized as having any right to interfere in the discipline of the schools, the arrangement of the studies, the taking of degrees, or the choice and approval of the teachers. (Allocation In Consistoriali, 1st November, 1860. Allocation Quibus luctuosisimam, 5th September, 1851.)

46. Much more, even in Clerical Seminaries, the method of study to be adopted is subject to the civil authority. (Allocation Nunquam fore, 15th December, 1856.)

47. The best theory of civil society requires, that popular schools open to the children of all classes, and, generally, all public institutes intended for instruction in letters and philosophy, and for conducting the education of the young, should be freed from all ecclesiastical authority, government, and interference, and should be fully subject to the civil and political power, in conformity with the will of rulers and the prevalent opinions of the age. (Letter to the Archbishop of Fribourg, Quum non sine, 14th July, 1864.)

48. This system of instructing youth, which consists in separating it from the Catholic faith and from the power of the Church, and in teaching exclusively, or at least primarily, the knowledge of natural things and the earthly ends of social life alone, may be approved by Catholics. (Id. Ibid.)

49. The civil power has the right to prevent ministers of Religion, and the faithful, from communicating freely and mutually with each other, and with the Roman Pontiff. (Allocation Maxima quidem, 9th June, 1862.)

50. The secular authority possesses, as inherent in itself, the right of presenting Bishops, and may require of them that they take possession of their dioceses, before having received canonical institution and the Apostolic letters from the Holy See. (Allocation Nunquam fore, 15th December, 1856.)

51. And further, the Secular Government has the right of deposing Bishops from their Pastoral functions, and it is not bound to obey the Roman Pontiff in those things which relate to Episcopal Sees and the institution of Bishops. (Letter Apost. Multiplices inter, 10th June, 1851. Allocation Acerbissimum, 27th Sept., 1852.)

52. The Government has of itself the right to alter the age prescribed by the Church for the religious profession, both of men and women; and it may enjoin upon all religious establishments to admit no person to take solemn vows without its permission. (Allocation Nunquam fore, 15th Dec., 1856.)

53. The laws for the protection of religious establishments, and securing their rights and duties, ought to be abolished: nay more, the civil government may lend its assistance to all who desire to quit the religious life they have undertaken, and break their vows. The government may also suppress Religious Orders, collegiate Churches, and simple Benefices, even those belonging to private patronage, and submit their goods and revenues to the administration and disposal of the civil power. (Allocation Acerbissimum, 27th Sept., 1852. Allocation Probe meminertis, 23d January, 1855. Allocation Cum esse, 26th July, 1855.)

54. Kings and princes are not only exempt from the jurisdiction of the Church, but are superior to the Church, in litigated questions of jurisdiction. (Letter Apost. Multiplices inter, 10th June, 1851.)

55. The Church ought to be separated from the State, and the State from the Church. (Allocation Acerbissimum, 27th September, 1852.)

VII. Errors concerning Natural and Christian Ethics.

56. Moral laws do not stand in need of the divine sanction, and there is no necessity that human laws should be conformable to the law of nature, and receive their sanction from God. (Allocation Maxima quidem, 9th June, 1862.)

57. Knowledge of philosophical things and morals, and also civil laws, may and must be independent of divine and ecclesiastical authority. (Allocation Maxima quidem, 9th June, 1862.)

58. No other forces are to be recognized than those which reside in matter; and all moral teaching and moral excellence ought to be made to consist in the accumulation and increase of riches by every possible means, and in the enjoyment of pleasure. (Allocation Maxima quidem, 9th June, 1862. Encyclical Quanto conficiamur, 10th August, 1863.)

59. Right consists in the material fact, and all human duties are but vain words, and all human acts have the force of right. (Allocation Maxima quidem, 9th June, 1862.)

60. Authority is nothing else but the result of numerical superiority and material force. (Allocation Maxima quidem, 9th June, 1862.)

61. An unjust act, being successful, inflicts no injury upon the sanctity of right. (Allocation Jamdudum cernimus, 18th March, 1861.)

62. The principle of *non-intervention*, as it is called, ought to be proclaimed and adhered to. (Allocation Novos at ante, 28th September, 1860.)

63. It is allowable to refuse obedience to legitimate Princes: nay more, to rise in insurrection against them. (Encyclical Qui pluribus, 9th November, 1846. Allocation Quisque vestrum, 4th October, 1847. Encyclical Noscitis et nobiscum, 8th December, 1849. Letter Apostolica Cum Catholicis, 26th March, 1860.)

64. The violation of a solemn oath, even every wicked and flagitious action repugnant to the eternal law, is not only not blamable, but quite lawful, and worthy of the highest praise, when done for the love of country. (Allocation Quibus quantisque, 20th April, 1846.)

VIII. Errors concerning Christian Marriage.

65. It cannot be by any means tolerated, to maintain that Christ has raised marriage to the dignity of a sacrament. (Apostolic Letter, Ad Apostolicum, 22d August, 1851.)

66. The sacrament of marriage is only an adjunct of the contract, and separable from it, and the sacrament itself consists in the nuptial benediction alone. (Id. Ibid.)

67. By the law of nature, the marriage tie is not indissoluble, and in many cases divorce, properly so called, may be pronounced by the civil authority. (Id. Ibid.; Allocation Acerbissimum, 27th September, 1852.)

68. The Church has not the power of laying down what are diriment impediments to marriage. The civil authority does possess such a power, and can do away with existing impediments to marriage. (Let. Apost. Multiplices inter, 10th June, 1851.)

69. The Church only commenced in later ages to bring in diriment impediments, and then availing herself of a right not her own, but borrowed from the civil power. (Let. Apost. Ad Apostolicum, 22d Aug., 1851.)

70. The canons of the Council of Trent, which pronounce censure of anathema against those who deny to the Church the right of laying down what are diriment impediments, either are not dogmatic, or must be understood as referring only to such borrowed power. (Let. Apost. Ibid.)

71. The form of solemnizing marriage prescribed by the said Council, under penalty of nullity, does not bind in cases where the civil law has appointed another form, and where it decrees that this new form shall effectuate a valid marriage. (Id. Ibid.)

72. Boniface VIII. is the first who declared, that the vow of chastity pronounced at Ordination annuls nuptials. (Id. Ibid.)

73. A merely civil contract may, among Christians, constitute a true marriage; and it is false, either that the marriage contract between Christians is always a sacrament, or that the contract is null if the sacrament be excluded. (Id. Ibid., Letter to King of Sardinia, 9th September, 1852. Allocution Acerbissimum, 27th September, 1852; Multis gravibusque, 17th December, 1860.)

74. Matrimonial causes and espousals belong by their very nature to civil jurisdiction. (Let. Apost. Ad Apostolicas, 29d August, 1851. Allocution Acerbissimum, 27th September, 1862.)

N. B. Two other errors may tend in this direction, those upon the abolition of the celibacy of Priests, and the preference due to the state of marriage over that of virginity. These have been proscribed; the first in the Encyclical "*Qui pluribus*," Nov. 9, 1846; the second in the Letters Apostolical "*Multiplices inter*," June 10, 1851.

IX. Errors regarding the Civil Power of the Sovereign Pontiff.

75. The children of the Christian and Catholic Church are not agreed upon the compatibility of the temporal with the spiritual power. (Let. Apost. Ad Apostolicas, 29d August, 1851.)

76. The abolition of the temporal power, of which the Apostolic See is possessed, would contribute in the greatest degree to the liberty and prosperity of the Church. (Al. Quibus quantisque, 20th April, 1849.)

N. B. Besides these errors, explicitly noted, many others are impliedly rebuked by the proposed and asserted doctrine, which all Catholics are bound most firmly to hold, touching the temporal Sovereignty of the Roman Pontiff. These doctrines are clearly stated in the Allocutions "*Quibus quantisque*," April 20, 1849; and "*Si semper antea*," May 20, 1850; Letters Apost. "*Quam Catholicas Ecclesias*," March 26, 1860; Allocutions "*Novae*," Sept. 28, 1860; "*Jamdudum*," March 18, 1861, and "*Maxima quidem*," June 9, 1862.

X. Errors having Reference to Modern Liberalism.

77. In the present day, it is no longer expedient that the Catholic Religion shall be held as the only Religion of the State, to the exclusion of all other modes of Worship. (Allocution Nemo vestrum, 28th July, 1855.)

78. Whence it has been wisely provided by law, in some countries called Catholic, that persons coming to reside therein shall enjoy the public exercise of their own worship. (Allocution Acerbissimum, 27th September, 1852.)

79. Moreover it is false, that the civil liberty of every mode of worship, and the full power given to all of overtly and publicly manifesting their opinions and their ideas, of all kinds whatsoever, conduce more easily to corrupt the morals and minds of the people, and to the propagation of the pest of indifferentism. (Allocution Nunquam fore, 15th December, 1856.)

80. The Roman Pontiff can and ought to reconcile himself to, and agree with progress, liberalism, and civilization as lately introduced. (Allocution Jamdudum cernimus, 18th March, 1861.)—*Pastoral Letter of Archbishop Spaulding, &c., &c.*

Instructions to Confederate Cruisers.

DEPARTMENT OF STATE, RICHMOND, Sept. 8, 1864.

Hon. S. R. Mallory, Secretary of the Navy.

SIR: I have the honor to acknowledge receipt of the following papers communicated by you to this Department on the 23d ult., under instructions of the President.

Confidential Communication to be made to the Officers in command of the "Florida," a vessel of war of the so-called Confederate States.

First: My attention having been drawn to the circumstances of the *Martaban*, a vessel with a British register and papers, having been burned at sea by the *Alabama*, I have issued the following instructions to the officers under my command.

To capture and send to England for adjudication in the Admiralty Court every vessel by which a British vessel (&c. with legal British papers) is burned at sea.

You are further to acquaint him that, the right or otherwise of the *Alabama* to burn the *Martaban* being not altogether free from doubt, I referred the question on the 2d of May last for instructions, which led me to expect a reply by the next mail. Should a view different from that which I have found it my duty to take of the question be arrived at by my superiors, I shall not fail to communicate it to him with the least possible delay, should the *Florida* still be on the station under my command.

Second: That, under these circumstances, it will be very satisfactory to me, if he can find it consistent with his duty, to give you a written assurance of his intention to forbear from any act of the like description until he has received special instructions in regard to this question from his Government, and that I shall be obliged by his communicating the tenor of such instructions to me by the earliest opportunity which he finds convenient.

Third: That the view I take of the question, and which I submit for his serious consideration, is as follows:

1st. That a belligerent has the right to burn the vessel of an enemy at sea.

2d. That a belligerent has the right to capture and to send a neutral for adjudication in an Admiralty Court, but in no case to burn her at sea prior to condemnation; and that if circumstances do not admit of his sending her in for adjudication in an Admiralty Court, then she should be dismissed.

Fourth: That the care with which officers in command of Confederate vessels of war have hitherto avoided giving just cause of offence to neutrals, induces me to indulge in the belief that he will avoid any act which may produce consequences which would be matter of much regret alike to me and to my superior; and that I beg to call his attention to the annexed opinion of Lord Stowell on this question, which I incline to think will find acceptance with the British Government.

J. HOPE, Vice-Admiral.

The paper annexed to the foregoing communication is in the following words:

Opinion of Lord Stowell on Capture and its Incidents.

Upon the surrender of a vessel under an enemy's flag on the high seas, a belligerent may destroy her under the general law of nations; and if a captor is unable to bring her into port, he will be justified toward his own Government in destroying her.

The instructions of his own Government may, indeed, require him to bring into port every capture which he may make, but he may be actually engaged on a service which will not allow him to put a prize crew on board the vessel which he has captured, in order that she may be taken into port. Under such a collision of duties, Lord Stowell has held that nothing is left to the belligerent vessel but to destroy the enemy's vessel which he has taken, for she cannot, consistently with her general duty to her own country, or, indeed, under its express injunctions, permit enemy's property to sail away unmolested. If it should be impossible to bring her in, her next duty is to destroy the enemy's property. When it is doubtful whether it is enemy's property, and it is impossible to bring it in, no such obligation arises, and the safe and proper course is to dismiss. When it is neutral, the act of destruction cannot be justified to the neutral owner by the gravest importance of such an act to the captor's own State. To the neutral it can only be justified, under any circumstances, by a full restitution in value. [Law of Nations, Dr. Twiss, 1863.]

Remark.—It is to be observed that, should the Confederate States fail in establishing their independence, then the above-named restitution in value would be impossible.

I hold this consideration to be an imperative obligation for forbearance on the part of the belligerent and the dismissal of the neutral vessel.

J. HOPE, Vice-Admiral.

The answer of Lieutenant-Commanding Morris to the foregoing communication is as follows:

C. S. STRAMER FLORIDA,

St. GEORGE'S, BERMUDA, June 20, 1864. }

SIR: Having considered the confidential communication of Sir James Hope, I have no hesitation in assuring you that it has been, and is now my intention to allow all neutral vessels (i. e. vessels producing legal papers) to pass, and that such are my instructions from my Government. I am, sir, respectfully, your obedient servant.

C. M. MORRIS, Lieut. Com.

J. W. ASHLEY, Esq., R. N.

After conference with the President, it has been deemed unnecessary to make extended comment on the paper signed by the vice-admiral, for the reason that it was evidently hazarded with distrust, until instructions could be obtained from his superiors. It can scarcely be assumed by us as possible that the British Government will concur in opinion with the distinguished naval officer that British Admiralty Courts have jurisdiction over the ships of war of a foreign Government with which Great Britain is at peace; or that the rights of this Government, as an acknowledged belligerent, can be affected by the fact that Great Britain has not chosen to recognize the independence of the Confederacy; or that the proper course for a professedly neutral nation, when complaining of alleged aggressions on its neutral commerce, is to commence hostilities on the high seas against one belligerent on the first occasion for complaint and without previous remonstrance or demand for redress, while remaining passive as to the other belligerent, after three years of constant and unavailing remonstrances against hundreds of outrages and aggressions.

The purpose of the President in requesting that the papers should be referred to this Department was to obtain for the guidance of the naval officers in command of our cruisers such further and fuller instructions for the discharge of their duties as the experience of the war has shown to be necessary. These instructions I have now the honor to forward to you for transmission to your subordinates.

Minute of Instructions.

The cases which occur for decision by our cruisers may be classified as follows:

A. A vessel under enemy's flag without cargo, or with cargo, belonging exclusively to enemy.

B. A vessel under enemy's flag with cargo, wholly or in part belonging to neutrals.

C. A vessel really neutral with cargo wholly or in part belonging to the enemy.

D. A vessel ostensibly neutral, but really hostile, fraudulently placed under a neutral flag and furnished with fraudulent papers as a cover to protect her from capture.

A. The right of our cruisers to capture enemy's property on the high seas is of course unquestioned. No condemnation by an Admiralty Court is necessary to vest title to such property in this Government. The capture itself gives instant title to the captors. The property so captured should in all cases be at once destroyed if it be not in the power of the captors to dispose of it otherwise for the benefit of the Confederacy. Enemy's vessels thus captured may be armed by the captors and placed under command of any commissioned officer of the Confederate States, and used either as tenders to the captors or detached as independent cruisers. Such vessels, so armed and commanded, are as fully entitled to the rights of national armed vessels as if built and equipped in our own waters. On this point it may be proper to observe that the British Government, after violating this principle of public law by

the seizure of the *Tuscaloosa* at the Cape of Good Hope, is understood to have admitted its error, and although it has not yet tendered us the satisfaction due for so violent an aggression on our rights, it published on the 2d of June last instructions relative to the treatment of prizes captured by either belligerent; and while refusing them permission to enter British ports, makes an express exception in favor of "a vessel which shall have been actually and bona fide converted into, and used as, a public vessel of war."

B. A vessel under enemy's flag with cargo wholly or in part belonging to neutrals:

Under ordinary circumstances this case would present no embarrassment. The captured vessel would be taken into a port of the captors, or of a neutral country; the portion of the cargo belonging to the neutral would be delivered to the owners, and the vessel, with such portion of the cargo as belonged to the enemy, would be condemned as prize.

The action of neutral governments has placed serious obstacles in the way of doing justice to their own people. They have closed their ports to the admission of captured vessels, and have thus rendered it impossible to make delivery in their own ports of the property of their own subjects found on board of the vessels of our enemies; while it would be exposing those vessels to almost certain recapture to attempt to bring them into our ports, for the captured vessels are almost invariably sailing vessels, and the enemy's cruisers of our ports are steamers. In most instances heretofore it has been found practicable to reconcile to a certain extent the exercises of our own just rights as belligerents with a due regard for the claims of neutrals, by allowing the vessels of the enemy when partially laden with neutral goods to be relieved on ransom bonds. But it is obvious that this is a mode rather of eluding than of solving the difficulty, and that we cannot allow to be established as a rule that our enemies may cover their shipping from capture during the war, by simply carrying neutral goods as a part of their cargo. If, for instance, Great Britain will not permit a captured enemy's vessels to be carried into one of her ports for the purpose of their delivering to a British subject his goods found on board, she would certainly have no just ground of complaint that the goods were not restored to their owner. If, therefore, on the renewed representations we are about to make, we find neutral nations persist in refusing to receive the property of their subjects in their own ports, when captured by us on enemy's vessels, it will become necessary to instruct our cruisers to destroy such property whenever they are unable to bring the prize into our ports. In the mean time it is deemed proper, as evidence of that respect for the rights of others which has been so seldom extended toward us in this war, that the commanders of our national cruisers should be instructed to continue their former practice of allowing the enemy to ransom his vessel in cases where the neutral property on board is of large value, or bears any considerable proportion to that of the enemy; but if a ransom bond is refused, or if the proportion of neutral property on board is small compared with the value of the vessel and hostile cargo, the whole should be destroyed, whenever the prize cannot be brought into a port of our own or of a neutral country.

C. A vessel really neutral, with cargo wholly or in part belonging to the enemy.

Under the law of nations as established prior to the year 1856, such a vessel would have been liable to capture, for the purpose of being brought into port, when the hostile cargo would be condemned as prize, and the neutral vessel and the neutral portion of the cargo would be liberated.

By the Paris Declaration of 1856, it was declared that "the neutral flag covers enemy's goods, with the exception of contraband of war;" and this rule was adopted by the resolutions of Congress of August 13, 1861.

In the President's Message to Congress on December 7, 1862, he pointed out that this concession of belligerent rights in favor of neutrals had been made by the Confederacy in return for an obligation entered into by Great Britain and France, that they would comply with the rule of international law, on the subject of blockades—also laid down in the declaration of Paris—that both these Powers had failed to fulfil their promise, and that the Confederacy was thereby released from its obligations toward them. But the President, at the same time, declared that the principles established by the Paris Convention were "more just, more humane, more consonant with modern civilization than those belligerent pretensions which great naval Powers have hitherto sought to introduce into the maritime code." He announced, that it was the policy of this Government to forego its right to retract the assent previously given to this rule of maritime law.

The cruisers of the Confederacy will, therefore, allow vessels of neutrals to pass free, unless laden with contraband of war destined for the enemy's ports. When such vessels are found to be laden with goods contraband of war, the contraband goods, if not the property of the owner of the vessel, are to be taken out, if practicable, and transhipped or destroyed, and she is to be allowed to continue her voyage. But if the owner of the vessel has put on board contraband goods belonging to himself, destined for the enemy's country, he thereby forfeits the neutral character, and the ship is to be considered an enemy's vessel, and to be dealt with as such. No conflict with neutral Powers on this subject is to be apprehended, as they have with entire unanimity issued proclamations forbidding their subjects during the present war from engaging in contraband trade, under penalty of forfeiture of national protection.

D. A vessel ostensibly neutral, but really hostile, fraudulently placed under neutral flag, and furnished with fraudulent papers to protect her from capture:

Whenever, upon the seizure of such a vessel, she is admitted by those in command to belong to the enemy, and her neutral flag and papers are admitted to be a mere cover, there can be no difficulty in dealing with such a vessel as though sailing under an enemy's flag.

The embarrassment in actual practice may be considered as occurring almost exclusively in cases where an enemy's vessel has been since the commencement of the present war transferred to neutrals. The law of nations on the subject of the right of a belligerent to make legal sale to neutrals *flagrante bello* is not settled by universal concurrence. Great Britain and the United States maintain the validity of such sales when *bona fide*, while France and Russia, and perhaps other European Continental Powers, hold that belligerent vessels sold to a neutral subsequent to the declaration of war are good prizes to the other belligerent, although bearing the neutral flag. The rule established in the United States was adopted prior to the secession of the Confederate States, and may be assumed to be binding on us until otherwise established by Congress.

Our cruisers ought, therefore, to be instructed that where a vessel of the United States has been sold in good faith to a neutral since the commencement of the war, and where the title is so absolutely transferred as to divest the enemy of any future interest in the vessel, she is free from capture. If, however, any enemy's interest in the vessel remain, if she be mortgaged or hypothecated to the enemy, she is as much liable to be dealt with as a hostile vessel as though no transfer to the neutral had been made.

Appended hereto is a list of the enemy's vessels transferred to neutrals since the beginning of the war, and known to be mortgaged to the enemy by the ostensible neutral owners. These and all other vessels in like condition are liable to capture by our cruisers as good prizes of war.

It frequently occurs, however, that a belligerent

makes simulated sales of vessels to neutrals with the view of protecting them from capture, and, under ordinary circumstances, when the other belligerent has reason to suspect the good faith of the transfer, the suspected vessel is brought into Court, for adjudication by the Admiralty.

This course is now not open to our cruisers for the reasons above explained, and the only instructions, therefore, practically applicable, under the circumstances, are the following:

The captor should in every case make rigid examination of the papers and documents of every vessel sailing under a neutral flag known to have belonged to the enemy at the commencement of the war.

He should take into consideration the nature of the trade in which the vessel is engaged, the national character of the master, the papers found on board, the place at which the alleged sale to the neutral took effect by delivery of the vessel, and every other circumstance tending to establish the true nature of the transfer, and to satisfy his mind whether the vessel be really neutral or merely disguised as such.

If the captured vessel has double sets of papers, or if papers have been destroyed, or subducted by her master during the chase, or if she has continued in the same course of trade, and under the same master since the alleged sale to the neutral, it may be safely concluded that the property is still hostile and covered by fraudulent use of neutral flag.

In these and all other cases, when there is great and decided preponderance of evidence to show that the vessel is really enemy's property, the cruiser must act on his conviction and treat her as such, leaving to his Government the responsibility of satisfying any neutral claim for her value.

But whenever the evidence leaves serious doubt as to the true character of the transfer, it will be proper rather to dismiss the vessel if she cannot be brought into port, than to exercise a harsh and doubtful belligerent right.

There is reason to hope, however, that most of the embarrassment existing on this branch of the subject will soon be ended by a modification of the orders of the British Government, which will permit justice to be done to its own subjects. The attempt to cover the enemy's vessels from capture by the fraudulent use of neutral papers has been made almost exclusively by collusion between the enemy and British subjects. This has gone to such an extent that such vessels are familiarly termed by British naval officers "whitewashed." In the report by Commander Wood of his interview with Vice-Admiral Hope, in the harbour of Halifax, we are informed that the British officer inquired what were the instructions in the case of vessels which had recently changed flags, or were "whitewashed;" that Commander Wood answered that, "unless the papers were clearly fraudulent, he would let the vessel go;" that Vice-Admiral Hope then inquired if Commander Wood had seen his communication to Captain Morris, of the Florida, and said that "his Government required that in all such cases the vessel should be brought into an English port to have the case decided on or adjudicated." Commander Wood is not certain whether the word "decided" or "adjudicated" was used.

If the British Government has, in the interest of its own subjects, become sensible of the impropriety and impolicy of shutting its ports to the introduction of prizes made by our vessels in all cases in which British claimants assert title to vessel or cargo, the instruction will be given to our cruisers to take into British ports all such vessels, there to remain until our Admiralty Courts have exercised their rightful exclusive jurisdiction over the prize questions involved in such captures. We have, for the present, no further information on this subject than the loose conversation above referred to, and this cannot be made the basis of action by our cruisers. I have the honor to be, Sir, very respectfully, your obedient servant.

J. P. BENJAMIN, Secretary of State.

Proceedings relative to Peace.

The correspondence respecting peace in 1864 will be found under the title UNITED STATES. At the commencement of 1865 the following further proceedings took place:

PRESIDENT LINCOLN'S MESSAGE RELATIVE TO THE PEACE CONFERENCE AT FORTRESS MONROE.

To the Honorable the House of Representatives:

In response to your resolution of the 8th inst., requesting information in relation to a conference held in Hampton Roads, I have the honor to state that on the date I gave Francis P. Blair, senior, a card written as follows, to wit:

"DECEMBER 23, 1864.

Allow the bearer, F. P. Blair, Sr., to pass our lines, go South and return.

(Signed)

A. LINCOLN."

That at the time I was informed that Mr. Blair sought the card as a means of getting to Richmond, Va., but he was given no authority to speak or act for the Government. Nor was I informed of any thing he would say or do on his own account or otherwise.

Mr. Blair told me that he had been to Richmond and had seen Mr. Jefferson Davis, and he (Mr. Blair) at the same time left with me a manuscript letter as follows, to wit:

"RICHMOND, VA., Jan. 12, 1865.

F. P. Blair, Esq.:

Sir: I have deemed it proper and probably desirable to you to give you in this form the substance of the remarks made by me to be repeated by you to President Lincoln, &c. I have no disposition to find obstacles in forms, and am willing now, as heretofore, to enter into negotiations for the restoration of peace. I am ready to send a commission whenever I have reason to suppose it will be received, or to receive a commission if the United States Government shall choose to send one. Notwithstanding the rejection of our former offers, I would, if you could promise that a commission, minister, or other agent would be received, appoint one immediately, and renew the effort to enter into a conference with a view to secure peace to the two countries.

Yours, &c., JEFFERSON DAVIS."

Afterward, with a view that it should be shown to Mr. Davis, I wrote and delivered to Mr. Blair a letter, as follows, to wit:

"WASHINGTON, JAN. 18, 1865.

F. P. Blair, Esq.:

Sir: You having shown me Mr. Davis' letter to you of the 12th inst., you may say to him that I have constantly been, am now, and shall continue ready to receive any agent whom he, or any other influential person now resisting the national authority, may informally send me, with a view of securing peace to the people of our common country.

Yours, &c., A. LINCOLN."

Afterward Mr. Blair dictated for and authorized me to make an entry on the back of my retained copy of the letter just above recited, which is as follows:

"JANUARY 23, 1865.

To-day Mr. Blair tells me that on the 21st inst. he delivered to Mr. Davis the original, of which the within is a copy, and left it with him; that at the time of delivering Mr. Davis read it over twice in Mr. Blair's presence, at the close of which he (Mr. B.) remarked that the part about our common country related to the part of Mr. Davis' letter about the two countries, to which Mr. D. replied that he understood it.

A. LINCOLN."

Afterward the Secretary of War placed in my hands the following telegram, indorsed by him, as appears:

"OFFICE U. S. MILITARY TELEGRAPH, }
War Department.

[CIPHER.] The following telegram was received at Washington, Jan. 29, 1865:

'FROM HEADQUARTERS ARMY OF THE JAMES, }
8:30 P. M., Jan. 23, 1865.

To Hon. E. M. Stanton, Secretary of War:

The following despatch is just received from Major Gen. Parke, who refers it to me for my action. I refer it to you in lieu of Gen. Grant's absence.

(Signed) E. O. C. ORD, Maj.-Gen. Comdg.'

'HEADQUARTERS ARMY OF THE JAMES,

The following despatch is forwarded to you for your action, since I have no knowledge of Gen. Grant's having had any understanding of this kind I refer this matter to you as the ranking officer present in the two armies. (Signed)

JOHN G. PARKE, Maj.-Gen. Comdg.'

'FROM HEADQUARTERS NINTH ARMY CORPS, }
January 23, 1865.

Major-General John G. Parke, Headquarters Army of the Potomac:

Alexander H. Stephens, R. M. T. Hunter, and J. A. Campbell desire to cross my lines, in accordance with an understanding claimed to exist with Lieut. Gen. Grant, on their way to Washington as Peace Commissioners. Shall they be admitted? They desire an early answer, so as to come through immediately. They would like to reach City Point to-night if they can. If they cannot do this they would like to come through to-morrow morning.

O. B. WILSON, Major Comm'g Ninth Corps.'

Respectfully referred to the President for such instructions as he may be pleased to give.

EDWIN M. STANTON, Secretary of War."

JANUARY 29, 1865—8:30 P. M.

It appears that about the time of placing the foregoing telegram in my hands the Secretary of War despatched to General Ord as follows, to wit:

"WAR DEPARTMENT, WASHINGTON CITY, }
Jan. 29, 1865—10 P. M.

Major-General Ord:

This Department has no knowledge of any understanding by Gen. Grant to allow any person to come within his lines as commissioners of any sort. You will therefore allow no one to come into your lines under such character or profession until you receive the President's instructions, to whom your telegrams will be submitted for his directions.

EDWIN M. STANTON, Secretary of War."

[SENT IN CIPHER AT 2 A. M.]

Afterward, by my directions, the Secretary of War telegraphed Gen. Ord as follows, to wit:

"WAR DEPARTMENT, WASHINGTON CITY, D. C., }
Jan. 30, 1865—10 A. M.

Major-General E. O. C. Ord, Headquarters Army of the James:

By the direction of the President you are instructed to inform the three gentlemen, Messrs. Stephens, Hunter, and Campbell, that a message will be despatched to them at or near where they now are without unnecessary delay.

EDWIN M. STANTON, Secretary of War."

Afterward I prepared and put into the hands of Major Thomas T. Eckert the following instructions:

EXECUTIVE MANNON, WASHINGTON, JAN. 30, 1865.

Major T. T. Eckert:

Sir: You will proceed with the documents placed in your hands, and on reaching Gen. Ord will deliver him the letter addressed him by the Secretary of War. Then, by Gen. Ord's assistance, procure an interview with Messrs. Stephens, Hunter, and Campbell, or any of them, deliver to him or them the paper on which your own letter is written. Note on the copy which you retain the time of delivery and to whom delivered. Receive their answer in writing, waiting a reasonable time for it, and which, if it contain their decision to come through without further conditions, will be your warrant to ask Gen. Ord to pass them through as directed in the letter of the Secretary of War. If by their answer they decline to come, or propose other terms, do not have

them passed through. And this being your whole duty return and report to me.

Yours truly,

A. LINCOLN."

"CITY POINT, Feb. 1, 1865.

Messrs. Alexander H. Stephens, J. A. Campbell, and R. M. T. Hunter:

Gentlemen: I am instructed by the President of the United States to place this paper in your hands, with the information that if you pass through the United States military lines, it will be understood that you do so for the purpose of an informal conference on the basis of that letter, a copy of which is on the reverse side of this sheet; and that you choose to pass on such understanding, and so notify me in writing. I will procure the Commanding General to pass you through the lines and to Fortress Monroe under such military precautions as he may deem prudent, and at which place you will be met in due time by some person or persons for the purpose of such informal conference; and, further, that you shall have protection, safe conduct, and safe return in all events.

THOMAS T. ECKERT,
Major and Aide-de-Camp."

Afterward, but before Major Eckert had departed, the following despatch was received from General Grant:

"OFFICE U. S. MILITARY TELEGRAPH, }
War Department. }

[CIPHER.]
The following telegram was received at Washington, Jan. 31, 1865, from City Point, Va., 10:30 A. M., Jan. 31, 1865:

'His Excellency Abraham Lincoln, President of the United States:

The following communication was received here last evening:

"PETERSBURG, VA., JAN. 30, 1865.

Lieut.-Gen. U. S. Grant, Commanding Armies of the United States:

Sir: We desire to pass your lines under safe conduct, and to proceed to Washington to hold a conference with President Lincoln upon the subject of the existing war, and with a view of ascertaining upon what terms it may be terminated, in pursuance of the course indicated by him in his letter to Mr. Blair of Jan. 18, 1865, of which we presume you have a copy, and if not, we wish to see you in person, if convenient, and to confer with you on the subject.

Very respectfully, yours,

ALEXANDER H. STEPHENS,
J. A. CAMPBELL,
R. M. T. HUNTER."

I have sent directions to receive these gentlemen, and expect to have them at my quarters this evening awaiting your instructions.

U. S. GRANT, Lieut.-General,
Commanding Armies of the United States."

This, it will be perceived, transferred Gen. Ord's agency in the matter to Gen. Grant. I resolved, however, to send Major Eckert forward with his message, and accordingly telegraphed Gen. Grant as follows, to wit:

"EXECUTIVE MANSION, WASHINGTON, }
Jan. 31, 1865. }

Lieut.-Gen. Grant, City Point, Va.:

A messenger is coming to you on the business contained in your despatch. Detain the gentlemen in comfortable quarters until he arrives, and then act upon the message he brings as far as applicable, it having been made up to pass through Gen. Ord's hands, and when the gentlemen were supposed to be beyond our lines.

A. LINCOLN."

[SENT IN CIPHER AT 1:30 P. M.]

When Major Eckert departed he bore with him a letter of the Secretary of War to Gen. Grant as follows, to wit:

"WAR DEPARTMENT, WASHINGTON, D. C., JAN. 30, 1865.
Lieut.-General Grant, Commanding, &c.

General: The President desires that you procure for the bearer, Major Thomas T. Eckert, an interview

with Messrs. Stephens, Hunter, and Campbell, and if, on his return to you he requests it, pass them through our lines to Fortress Monroe by such route and under such military precautions as you may deem prudent, giving them protection and comfortable quarters while there, and that you let none of this have any effect upon any of your movements or plans.

By order of the President,
EDWIN M. STANTON, Secretary of War."

Supposing the proper point to be then reached, I despatched the Secretary of State with the following instructions, Major Eckert, however, going ahead of him:

"EXECUTIVE MANSION, JAN. 31, 1865.

Hon. Wm. H. Seward, Secretary of State:

You will proceed to Fortress Monroe, Va., there to meet and informally confer with Messrs. Stephens, Hunter, and Campbell on the basis of my letter to F. P. Blair, Esq., of Jan. 18, 1865, a copy of which you have. You will make known to them that three things are indispensable, to wit: 1st, the restoration of the national authority throughout all the States; 2d, no receding by the Executive of the United States on the slavery question from the position assumed thereon in the late annual message to Congress, and in the preceding documents; 3d, no cessation of hostilities short of an end of the war and the disbanding of all the forces hostile to the Government. You will inform them that all propositions of theirs not inconsistent with the above will be considered and passed upon in a spirit of sincere liberality. You will hear all they may choose to say and report it to me. You will not assume to definitely consummate any thing. Yours, &c., ABRAHAM LINCOLN."

On the day of its date the following telegram was sent to Gen. Grant:

"WAR DEPARTMENT, WASHINGTON, Feb. 1, 1865.

Lieut.-General Grant, City Point, Va.:

Let nothing which is transpiring change, hinder, or delay your military movements or plans.

A. LINCOLN."

[SENT IN CIPHER AT 9:30 A. M.]

Afterward the following despatch was received from Gen. Grant:

"OFFICE U. S. TELEGRAPH, WAR DEPARTMENT.

[IN CIPHER.]

The following telegram was received at Washington at 2:30 P. M., Feb. 1, 1865, from City Point, Va., Feb. 1, 12:30 P. M., 1865:

'His Excellency A. Lincoln, President of the United States:

Your despatch is received. There will be no armistice in consequence of the presence of Mr. Stephens and others within our lines. The troops are kept in readiness to move at the shortest notice if occasion should justify it.

U. S. GRANT, Lieut.-Gen."

To notify Major Eckert that the Secretary of State would be at Fortress Monroe and to put them in communication, the following despatch was sent:

"WAR DEPARTMENT, WASHINGTON, Feb. 1, 1865.

T. T. Eckert, care Gen. Grant, City Point, Va.:

Call at Fortress Monroe and put yourself under the direction of Mr. S., whom you will find there.

A. LINCOLN."

On the morning of the 2d inst. the following telegrams were received by me from the Secretary of State and Major Eckert:

"FORTRESS MONROE, VA.—11:30 P. M., Feb. 1, 1865.

The President of the United States:

Arrived here this evening. Richmond party not here. I remain here. W. H. SEWARD."

"CITY POINT, VA., 10 P. M., Feb. 1, 1865.

His Excellency A. Lincoln, President of the United States:

I have the honor to report the delivery of your communication and my letter at 4:15 this afternoon, to which I received a reply at 6 P. M., but not satisfactory. At 8 P. M. the following note, addressed to Gen. Grant, was received:

'CITY POINT, VA., Feb. 1, 1865.

To Lieut.-Gen. Grant :

Sir : We desire to go to Washington City to confer informally with the President personally, in reference to the matters mentioned in his letter to Mr. Blair of the 18th of January, ult., without any personal compromise on any question in the letter. We have the permission to do so from the authorities in Richmond.

Very respectfully yours,

ALEX. H. STEPHENS,
R. M. T. HUNTER,
J. A. CAMPBELL.

At 9:30 p. m. I notified them that they could not proceed further unless they complied with the terms expressed in my letter. The point of meeting designated in the above would not in my opinion be insisted upon. I think Fortress Monroe would be acceptable. Having complied with my instructions, will return to Washington to-morrow unless otherwise ordered. THOMAS T. ECKERT, Major, &c."

On reading this despatch of Major Eckert's, I was about to recall him and the Secretary of State, when the following telegram of Gen. Grant to the Secretary of War was shown me :

"OFFICE U. S. MILITARY TELEGRAPH, WAR DEPARTMENT.
[IN CIPHER.]

The following telegram, received at Washington at 4:35 A. M., Feb. 2, 1865, from City Point, Va., Feb. 1, 1865 :

'Hon. Edwin M. Stanton, Secretary of War :

Now that the interview between Major Eckert, under his written instructions, and Mr. Stephens and party has ended, I will state confidentially, but not officially, to become a matter of record, that I am convinced, upon conversation with Messrs. Stephens and Hunter, that their intentions are good and their desire sincere to restore peace and Union. I have not felt myself at liberty to express even views of my own, or to account for my reticence. This has placed me in an awkward position, which I could have avoided by not seeing them in the first instance. I fear now their going back without any expression to any one in authority will have a bad influence. At the same time I recognize the difficulties in the way of receiving their informal commissioners at this time, and I do not know what to recommend. I am sorry, however, that Mr. Lincoln cannot have an interview with the two named in this despatch, if not all three now within our lines. Their letter to me was all that the President's instructions contemplated to secure their safe conduct if they had used the same language to Capt. Eckert.

U. S. GRANT, Lieutenant-General."

This despatch of Gen. Grant changed my purpose, and accordingly I telegraphed him and the Secretary of War as follows :

"WAR DEPARTMENT, WASHINGTON, Feb. 2, 1865.
To Lieut.-Gen. Grant, City Point, Va. :

Say to the gentlemen that I will meet them personally at Fortress Monroe as soon as I can get there.

A. LINCOLN."

[SENT IN CIPHER AT 9 A. M.]

"WAR DEPARTMENT, WASHINGTON, D. C., Feb. 2, 1865.
To Hon. Wm. H. Seward, Fortress Monroe, Va. :

Induced by a despatch from Gen. Grant, I join you at Fortress Monroe as soon as I can come.

A. LINCOLN."

[SENT IN CIPHER AT 9 A. M.]

Before starting the following despatch was shown me. I proceeded nevertheless :

"OFFICE U. S. MILITARY TELEGRAPH, WAR DEPARTMENT.
[IN CIPHER.]

The following telegram was received at Washington, Feb. 2, 1865, from City Point, Va., 9 A. M., Feb. 2, 1865 :

'To Hon. W. H. Seward, Sec'y of State, Fortress Monroe :
[Copy to Hon. E. M. Stanton, Secretary of War.]

The gentlemen here have accepted the proposed terms and will leave for Fortress Monroe at 9:30 A. M.

U. S. GRANT, Lieut.-Gen."

On the night of the 2d, I reached Hampton Roads, and found the Secretary of State and Major Eckert in a steamer anchored off the shore, and learned of them that the Richmond gentlemen were in another steamer, also anchored off shore in the Roads, and that the Secretary of State had not yet seen or communicated with them. I ascertained that Major Eckert had literally complied with his instructions, and I saw for the first time the answer of the Richmond gentlemen to him, which in his despatch to me of the 1st, he characterized as not satisfactory. That answer is as follows, to wit :

"CITY POINT, Va., Feb. 1, 1865.

To Thos T Eckert, Major and Aide-de-camp.

Major: Your note delivered by yourself this day has been considered. In reply, we have to say that we were furnished with a copy of the letter of President Lincoln to F. P. Blair, of the 18th of January ult. Another copy of which is appended to your note. Our intentions are contained in the letter, of which the following is a copy :

'RICHMOND, Jan. 28, 1865.

In conformity with the letter of Mr. Lincoln, of which the foregoing is a copy, you are to proceed to Washington City for an informal conference with him upon the issues involved in the existing war and for the purpose of securing peace to the two countries.

With great respect, your obedient servant,

JEFFERSON DAVIS.'

The substantial object to be attained by the informal conference is to ascertain upon what terms the existing war can be terminated honorably. Our instructions contemplate a personal interview between President Lincoln and ourselves at Washington; but with this explanation, we are ready to meet any person or persons that President Lincoln may appoint, at such place as he may designate. Our earnest desire is that a just and honorable peace may be agreed upon, and we are prepared to receive or to submit propositions which may possibly lead to the attainment of that end.

Very respectfully yours,

ALEXANDER H. STEPHENS,
R. M. T. HUNTER,
JOHN A. CAMPBELL."

A note of these gentlemen, subsequently addressed to Gen. Grant, has already been given in Major Eckert's despatch of the 1st inst. I also saw here for the first time the following note addressed by the Richmond gentlemen to Major Eckert :

"CITY POINT, VA., Feb. 2, 1865.

Thomas T. Eckert, Major and A. D. C.

Major: In reply to your verbal statement that your instructions did not allow you to alter the conditions upon which a passport would be given to us, we say that we are willing to proceed to Fortress Monroe, and there to have an informal conference with any person or persons that President Lincoln may appoint, on the basis of his letter to Francis P. Blair of the 18th of January ultimo, or upon any other terms or conditions that he may hereafter propose not inconsistent with the essential principles of self-government and popular rights; upon which our institutions are founded. It is our earnest wish to ascertain, after a free interchange of ideas and information, upon what principles and terms, if any, a just and honorable peace can be established without the further effusion of blood, and to contribute our utmost efforts to accomplish such a result. We think it better to add, that in accepting your passport we are not to be understood as committing ourselves to any thing, but to carry on this informal conference with the views and feelings above expressed.

Very respectfully yours, &c.,

ALEX. H. STEPHENS,
J. A. CAMPBELL,
R. M. T. HUNTER."

[NOTE. The above communication was delivered

to me at Fortress Monroe at 4.40 P. M., Feb. 2, by Lieut.-Col. Babcock, of Gen. Grant's staff.

THOS. T. ECKERT, Major and A. D. C.]

"EXECUTIVE MANSION, Feb. 10, 1865.

On the morning of the 8d, the gentlemen, Messrs. Stephens, Hunter, and Campbell came aboard of our steamer and had an interview with the Secretary of State and myself of several hours' duration. No question of preliminaries to the meeting was then and there made or mentioned. No other person was present. No papers were exchanged or produced, and it was in advance agreed that the conversation was to be informal and verbal merely. On my part the whole substance of the instructions to the Secretary of State, hereinbefore recited, was stated and insisted upon, and nothing was said inconsistent therewith, while by the other party it was not said that in any event or on any condition they ever would consent to reunion; and yet they equally omitted to declare that they would never so consent. They seemed to desire a postponement of that question and the adoption of some other course first, which, as some of them seemed to argue, might or might not lead to reunion, but which course we thought would amount to an indefinite postponement.

The conference ended without result.

The foregoing, containing, as is believed, all the information sought, is respectfully submitted.

ABRAHAM LINCOLN."

The following was inclosed in the message sent to the Senate by the President:

"DEPARTMENT OF STATE, WASHINGTON, Feb. 10, 1865.

The Secretary of State, to whom was referred a resolution of the Senate of the 8th instant, requesting the President of the United States, if, in his opinion, it is not incompatible with the public interest, to furnish to the Senate any information in his possession concerning the recent conversation or communications with certain rebels said to have occurred under Executive sanction, including communications with the rebel Jefferson Davis, and any correspondence relating thereto, has the honor to report that the Senate may properly be referred to a special message of the President, bearing upon the subject of the resolution and transmitted to the House this day. Appended to this report is a copy of the instructions which has been addressed to Charles Francis Adams, Esq., Envoy Extraordinary and Minister Plenipotentiary of the United States at London, and which is the only correspondence found in this Department touching the subject referred to in the resolution.

Respectfully submitted, WM. H. SEWARD."

MR. SEWARD TO MR. ADAMS.

DEPARTMENT OF STATE, WASHINGTON, Feb. 9, 1865.

Sir: It is true that in times of peace there are always instigators of war. So soon as a war begins there are citizens who emphatically demand negotiations of peace. The advocates of war, after an agitation longer or shorter, generally gain their fearful end, though the war declared is not unfrequently unnecessary and unwise. So peace agitators, in time of war, ultimately bring about an abandonment of the conflict, sometimes without securing the advantages which were originally expected from the conflict. The agitators for war in times of peace, and for peace in time of war, are not unnecessarily, or perhaps ordinarily, unpatriotic in their purposes or motives. Results alone determine whether they are wise or unwise. The treaty of peace concluded at Guadalupe Hidalgo was secured by an irregular negotiation under the Don of the government.

Some of the efforts which have been made to bring about negotiations with a view to end our civil war are known to the whole world, because they have employed foreign as well domestic agents. Others with whom you have had to deal confidentially are known to yourself, although they have not publicly transpired. Other efforts have occurred here which are known only to the persons actually moving in them and to this Government.

I am now to give for your information an account of an affair of the same general character which recently received much attention here, and which doubtless will excite inquiry abroad. A few days ago Francis P. Blair, Esq., of Maryland, obtained from the President a simple leave to pass through our lines without definite views known to the Government.

Mr. Blair visited Richmond, and on his return he showed to the President a letter which Jefferson Davis had written to Mr. Blair, in which Davis wrote that Mr. Blair was at liberty to say to President Lincoln that Davis was now, as he always had been, willing to send commissioners if assured they would be received, or to receive any that should be sent; that he was not disposed to find obstacles in forms; that he would send commissioners to confer with the President with a view to a restoration of peace between the two countries, if he could be assured they would be received. The President, therefore, on the 18th day of January, addressed a note to Mr. Blair, in which the President, after acknowledging that he had read the note of Mr. Davis, said that he was, is, and always should be, willing to receive any agents that Mr. Davis, or any other influential man now actually resisting the authority of the Government, might send to confer informally with the President, with a view to the restoration of peace to the people of our common country. Mr. Blair visited Richmond with this letter and then again came back to Washington on the 29th ult.

We were advised from the camp of Lieut.-General Grant that Alex. H. Stephens, R. M. T. Hunter and J. A. Campbell were applying for leave to pass through the lines to Washington, as Peace Commissioners, to confer with the President. They were permitted by the Lieut.-General to come to his headquarters, to await there the decision of the President. Major Eckert was sent down to meet the party from Richmond at General Grant's headquarters. The major was directed to deliver to them a copy of the President's letter to Mr. Blair, with a note to be addressed to them and signed by the major, in which they were directly informed that if they should be allowed to pass our lines they would be understood as coming for an informal conference upon the basis of the aforementioned letter of the 18th of January to Mr. Blair. If they should express their assent to this condition in writing, then Major Eckert was directed to give them safe conduct to Fortress Monroe, where a person coming from the President would meet them.

It being thought probable, from a report of their conversation with Lieut.-Gen. Grant, that the Richmond party would in the manner prescribed accept the conditions mentioned, the Secretary of State was charged by the President with the duty of representing this Government in the expected informal conference.

The Secretary arrived at Fortress Monroe in the night of the 1st of February. Major Eckert met him on the morning of the 2d of February, with the information that the persons who had come from Richmond had not accepted in writing the conditions upon which he was allowed to give them conduct to Fortress Monroe. The major had given the same information by telegraph to the President at Washington. On receiving this information the President prepared a telegram, directing the Secretary to return to Washington. The Secretary was preparing at the same moment to so return without waiting for information from the President, but at this juncture Lieut.-Gen. Grant telegraphed to the Secretary of War, as well as to the Secretary of State, that the party from Richmond had reconsidered and accepted the condition tendered them through Major Eckert, and Gen. Grant urgently advised the President to confer in person with the Richmond party.

Under these circumstances the Secretary, by the President's direction, remained at Fortress Monroe,

and the President joined him there in the night of the 2d of February. The Richmond party was brought down the James River, in a United States steam transport during the day, and the transport was anchored in Hampton Roads.

On the morning of the 3d inst., the President, attended by the Secretary, received Messrs. Stephens, Hunter, and Campbell on board.

The conference was altogether informal. There was no attendance of secretaries, clerks, or other witnesses. Nothing was written or read. The conversation—although earnest and full—was calm and courteous and kind on both sides. The Richmond party approached the discussion rather indirectly, and at no time did they make categorical demands, or tender formal stipulations or absolute refusals. Nevertheless, during the conference, which lasted four hours, the several points at issue between the Government and the insurgents were distinctly raised, and discussed fully, intelligently, and in an amicable spirit.

What the insurgent party seemed chiefly to favor was a postponement of the question of separation upon which the war is waged and a mutual direction of the efforts of the Government as well as those of the insurgents to some extrinsic policy or scheme for a season, during which passions might be expected to subside and the armies be reduced, and trade and intercourse between the people of both sections be resumed. It was suggested by them that through such postponement we might now have immediate peace with some, not very certain, prospect of an ultimate satisfactory adjustment of the political relations between the Government and the States, section or people now engaged in conflict with it. The suggestion, though deliberately considered, was nevertheless regarded by the President as one of armistice or truce, and he announced that we can agree to no cessation or suspension of hostilities except on the basis of the disbandment of the insurgent forces, and the restoration of the national authority throughout all the States in the Union, collaterally and in subordination to the proposition which was thus announced.

The anti-slavery policy of the United States was reviewed in all its bearings, and the President announced that he must not be expected to depart from the positions he had heretofore assumed in his proclamation of emancipation and other documents, as these positions were reiterated in his annual message.

It was further declared by the President that the complete restoration of the National authority everywhere was an indispensable condition of any assent on our part to whatever form of peace might be proposed. The President assured the other party that while he must adhere to these positions, he would be prepared, so far as power is lodged with the Executive, to exercise liberality. His power, however, is limited by the Constitution, and when peace should be made, Congress must necessarily act in regard to the approbation of money and to the admission of Representatives from the insurrectionary States.

The Richmond party were then informed that Congress had, on the 31st ult., adopted, by a Constitutional majority, a joint resolution submitting to the several States the proposition to abolish slavery throughout the Union, and that there is every reason to expect that it will be accepted by three-fourths of the States, so as to become a part of the National organic law.

The conference came to an end by mutual acquiescence, without producing an agreement of views upon the several matters discussed, or any of them. Nevertheless, it is perhaps of some importance that we have been able to submit our opinions and views directly to prominent insurgents, and to hear them in answer in a courteous and not unfriendly manner.

I am, sir, your obedient servant.

WM. H. SEWARD.

REPORT OF MESSRS. STEPHENS, HUNTER, AND CAMPBELL.
EXECUTIVE OFFICE, RICHMOND, February 6, 1865.
To the Senate and House of Representatives of the Confederate States of America:

Having recently received a written notification which satisfied me that the President of the United States was disposed to confer informally with unofficial agents which might be sent by me, with a view to the restoration of peace, I requested the Hon. Alexander H. Stephens, the Hon. R. M. T. Hunter, and the Hon. John A. Campbell to proceed through our lines and to hold conference with Mr. Lincoln, or any one he might depute to represent him.

I herewith transmit, for the information of Congress, the report of the eminent citizens above named, showing that the enemy refused to enter into negotiations with the Confederate States, or any one of them separately, or to give to our people any other terms or guarantees than those which the conqueror may grant, or to permit us to have peace on any other basis than our unconditional submission to their rule, coupled with the acceptance of their recent legislation on the subject of the relations between the white and black population of each State. Such is, as I understand, the effect of the amendment to the Constitution which has been adopted by the Congress of the United States.

JEFFERSON DAVIS.

RICHMOND VA., February 5, 1865.

To the President of the Confederate States:

SIR: Under your letter of appointment of the 26th ult., we proceeded to seek an "informal conference" with Abraham Lincoln, President of the United States, upon the subject mentioned in the letter. The conference was granted, and took place on the 30th inst., on board of a steamer in Hampton Roads, where we met President Lincoln and the Hon. Mr. Seward, Secretary of State of the United States. It continued for several hours, and was both full and explicit.

We learned from them that the message of President Lincoln to the Congress of the United States in December last explains clearly and distinctly his sentiments as to the terms, conditions, and method of proceeding by which peace can be secured to the people, and we were not informed that they would be modified or altered to obtain that end. We understand from him that no terms or proposals of any treaty or agreement looking to an ultimate settlement would be entertained or made by him with the Confederate States, because that would be a recognition of their existence as a separate power, which, under no circumstances, would be done; and for like reasons that no such terms would be entertained by him from the States separately; that no extended truce or armistice (as at present advised) would be granted, without a satisfactory assurance in advance of a complete restoration of the authority of the United States over all places within the States of the Confederacy.

That whatever consequence may follow from the reestablishment of that authority must be accepted; but that individuals, subject to pains and penalties under the laws of the United States, might rely upon a very liberal use of the power confided to him to remit those pains and penalties if peace be restored.

During the conference the proposed amendment to the Constitution of the United States, adopted by Congress on the 31st ult., was brought to our notice. This amendment declares that neither slavery nor involuntary servitude, except for crimes, should exist within the United States, or any place within their jurisdiction, and that Congress should have power to enforce this amendment by appropriate legislation. Of all the correspondence that preceded the conference herein mentioned, and leading to the same, you have heretofore been informed.

Very respectfully, your obedient servants,

ALEX. H. STEPHENS,
R. M. T. HUNTER,
JOHN A. CAMPBELL.

Q

QUINCY JOSIAH, an American statesman, born in Boston, February 4, 1772, died in Quincy, Mass., July 1, 1864. He was the only son of Josiah Quincy, jr., the noted patriot and orator of ante-revolutionary times, who dying a few months before the outbreak of the war of independence, bequeathed to his infant offspring the works of Sidney, Locke, and Bacon, with the additional wish, "May the Spirit of Liberty rest upon him!" Young Quincy received his preliminary education at Phillips' Academy, Andover, Mass., and was graduated at Harvard College in 1790, with the highest honors of his class. In 1793 he commenced the practice of the law in Boston, but amidst the political turmoil of the time he showed less inclination for a professional than for a public career, which seemed more suited to his peculiar turn of mind, and to which the example of his father and the expectations of his friends incited him. Though courted by the anti-federalists, he early associated himself with the federal party, to which he remained faithful while it had a name or organization, and from the principles of which he never swerved to the day of his death. In 1797 he married Eliza, daughter of Col. John Morton, of New York, with whom he lived most happily for fifty-three years; and in 1800, being then twenty-eight years of age, he was brought forward by the federalists as their candidate to represent the Boston district in Congress, but was defeated by William Eustis, afterwards Secretary of the Navy. At the next congressional election, John Quincy Adams was the federal candidate, but met with even less success than Mr. Quincy, who in 1804 finally prevailed over his old antagonist by a handsome majority, and in December, 1805, took his seat as a member of the Ninth Congress. By successive elections he held this position until 1813, when he declined a renomination and retired to private life. His oratorical abilities, readiness in debate, wit, sarcasm, and extensive political knowledge, made him the leader of the small but resolute band of federalists, who maintained in the national legislature a hopeless opposition to the dominant republican party. He proved a constant thorn in the side of the administrations of Jefferson and Madison, and in the acrimonious warfare then carried on in Congress, no one showed himself a more consummate master of fence. He often indeed went beyond the limits of parliamentary decorum, seeming rather to court than to shun opposition; and some of his speeches are remarkable for passionate declamation and invective. The embargo, the purchase of Louisiana, and the war of 1812, were among the chief measures which he opposed, and he was one of the first to denounce the slaveholding interest as a rising and dangerous tyranny.

Upon retiring from Congress Mr. Quincy, having at his command an ample fortune, hoped to be able to devote much of his time to agricultural pursuits at his country seat in Quincy, near Boston. But he had assumed too conspicuous a position to be at once spared by his party, and he was almost immediately elected to the Massachusetts State Senate, where he continued to be a no less earnest opponent of the war than when in Congress. One of his most conspicuous acts in the former body, was the framing of a preamble and resolution on the capture of the British corvette *Peacock*, by the *Hornet*, under Captain Lawrence. The preamble praised the conduct of the commander, officers, and crew of the *Hornet*, but the resolution which followed declared that the "war was waged without justifiable cause," and that it did not become a moral and religious people to express approbation of exploits not immediately connected with the defence of the seacoast and harbors of the country. He remained in the Senate until 1820, when, on the ground that his course was compromising the interests of his party, he failed to obtain a renomination. He was immediately, however, elected to the Massachusetts House of Representatives from Boston, and became speaker of that body. He filled the same office at the next session of the Legislature in 1821, but resigned before the expiration of his term, in order to accept the position of judge of the Municipal Court of Boston. In this capacity he laid down, for the first time, the doctrine, now generally accepted, that the publication of the truth with good intentions and for a justifiable motive, is not libellous. In 1823 he was elected mayor of Boston, and held the office by successive reelections until 1828, when he was appointed President of Harvard University to succeed Dr. Kirkland. He was inaugurated in June, 1829, and discharged the duties of his office with eminent ability and usefulness until the summer of 1845, when, having reached the ripe age of 73, he retired permanently to private life.

His remaining years were rendered agreeable by the pursuit of literature, and by the society of his numerous friends and of his family. A constitution of remarkable strength enabled him to undertake duties usually assumed by men of early manhood or middle life, and he entered into them with an enthusiasm characteristic of his early career. Even after he had passed his 90th year, his hale and but slightly bowed figure could frequently be seen about the streets of Boston, where he was universally respected, and even venerated, as the sole survivor of an older race of statesmen. His manners, frank, cordial, and conciliating, his unselfish kindness of heart, and his integrity of character, against which not even his most in-

veterate political enemies had ever breathed a suspicion, all contributed to render his old age interesting and endearing. Few men, it may be said, have ever so completely outlived the animosity which party rancor had associated with their character. Though retired from political life he continued to be in theory a federalist of the early type, and an uncompromising opponent of a slaveholding power. He was a warm advocate of the election of Col. Fremont in 1856, in whose behalf he wrote and even spoke in public, though then in his 85th year; and the outbreak of the rebellion in 1861 found him a staunch supporter of the Government, notwithstanding the infirmities of age prevented him from taking an active part in

support of the Union. He looked upon the war as the most hopeful sign of the country's future that he had ever seen, and predicted from the date of its termination the commencement of a new and grander epoch of national greatness.

Besides a number of speeches in Congress and occasional orations, in which he evinced a considerable degree of florid eloquence, Mr. Quincy published a memoir of his father; "History of Harvard University" (2 vols., Cambridge, 1840), expanded from his oration at the second Centennial of the University; "Municipal History of Boston during two centuries;" "Life of John Quincy Adams," and some miscellaneous works.

R

RANNEY, MOSES H., M.D., an American physician, born at Stockbridge, Vt., Aug. 16th, 1814, died in New York, of typhus fever, Dec. 7th, 1864. He graduated at the Berkshire Medical Institute, at Pittsfield, Mass., in 1838, and subsequently practised his profession in Saugsbury, Vt., for seven years. In 1845 he removed to New York City, and was appointed assistant physician of Bellevue Hospital. After a due course of service he was appointed resident physician of the lunatic asylum on Blackwell's Island, in 1847, which position he held until his decease. He occupied a high place in the medical profession, and was thoroughly adapted for the important and responsible position to which he was called, and from his experience and close application to the study of mental diseases was accounted as an authority both in the profession and in the courts; his opinions being frequently made the basis of judicial decisions. Dr. Ranney was a member of the New York Pathological Society, and a frequent contributor to the medical and psychological journals of the United States.

RANSOM, THOMAS EDWARD GREENFIELD, a brigadier-general of U. S. volunteers, born in Norwich, Vt., November 29, 1834, died of dysentery at Rome, Ga., October 29, 1864. In 1846 he entered Norwich University, continuing there, with the exception of a short interval, until the age of seventeen. In 1851 he entered upon the practise of his profession as an engineer, in LaSalle County, Illinois. Three years later he embarked in the real estate business at Peru in that State, and in 1855 removed to Chicago to become a member of a firm largely engaged in land operations. At a later period he removed to Fayette County, and while engaged in trade acted as an agent for the Illinois Central Railroad Company. At the commencement of the war he raised a company and proceeded to Camp Yates, at Springfield, April 24, 1861, where it was organized into the 11th Illinois volunteers, and upon the election of offi-

cers he was made major. After the expiration of the three months' service the regiment was reorganized and mustered in for three years, Ransom being elected lieutenant-colonel. On the night of the 19th of August, in a brilliant dash upon Charleston, Mo., he was severely wounded, and in consequence was granted a furlough of thirty days, but reported for duty upon the seventh day. He participated in the capture of Fort Henry, and led his regiment in the assault upon Fort Donelson, where he was again severely wounded, his clothing being pierced by six bullets, but he would not leave the field until the battle was ended. For his gallantry upon that occasion he was promoted to the colonelcy. At Shiloh Colonel Ransom led his regiment through the hottest part of the battle, and was mentioned by Major-General McClelland in his official report as "performing prodigies of valor, though reeling in his saddle and streaming with blood from a serious wound." He subsequently served upon the staff of Gen. McClelland, and also upon that of Gen. Grant, who has on several occasions borne testimony to his bravery as an officer. In January, 1863, Ransom was appointed brigadier-general, his commission dating from November, 1862. He won honor to himself at Vicksburg and during the Red River campaign, commanded a division until Gen. McClelland fell ill, when the command of the corps devolved upon him. In the disastrous battle of Sabine Cross-Roads, April, 1864, while fighting with a courage and bravery unsurpassed, he was severely wounded in the knee. The limb was examined by four surgeons, two advising amputation, and the others deeming it unnecessary. Subsequently Gen. Ransom was assigned to the command of the Fourth division, Sixteenth army corps, operating in the vicinity of Atlanta, from thence was promoted to the command of the left wing of the corps, and finally to the command of the Seventeenth corps. From the date of the capitulation of

Atlanta, Gen. Ransom had suffered from a severe attack of dysentery, but no consideration would induce him to leave the post of duty. While his corps was in pursuit of Hood's army he directed its movements though obliged to ride in an ambulance, being too weak to sit upon his horse, and soon after sank under the power of his disease. His career, though short, was brilliant. He was a man of fine genius, great military capacity, and of unblemished personal character.

REEDER, ANDREW H., ex-Governor of Kansas, born near Trenton, N. J., about 1808, died at Easton, Pa., July 5th, 1864. When a boy he removed to Easton, where he spent the greater portion of his life. He studied law, was admitted early to the bar, and by his own merit rose to a position of distinction. He was a prominent and influential member of the Democratic party, but never would accept any office until 1854, when, without solicitation upon his part, or any knowledge that his name was presented, he was appointed first governor of Kansas. He went out with the intention of executing the law in accordance with the squatter sovereignty doctrine of Senator Douglas, but the troubles arising from the election frauds made him a Republican. In July, 1855, Gov. Reeder was removed from office. He, however, remained in the State, and was unanimously elected by the people their delegate to Congress, and afterwards, by the legislature convened under the Topeka constitution, the first United States Senator from Kansas, but the constitution not having been ratified by Congress he did not take his seat. At the outbreak of the war the first military appointments made by the President were Nathaniel Lyon and Gov. Reeder to be brigadier-generals of the regular army. The latter, upon mature deliberation, arrived at the patriotic conclusion that he was too far advanced in life to learn a new profession upon the field of battle. His contributions to his country have, nevertheless, been large, his three sons having immediately entered the army.

REFORMED CHURCHES.—The following is a summary of the statistics of the German Reformed Church in the United States in 1864: General Synod, 1; Synods, 2; Classes, 27; Ministers, 480; Congregations, 1,134; Members, 107,894; Unconfirmed Members, 73,576; Baptisms, 10,829; Confirmations, 4,908; Received on Certificate, 1,612; Communicants, 89,115; Excommunicated, 160; Dismissed, 674; Deaths, 4,675; Sabbath Schools, 852 Sabbath School scholars (one Synod only reported), 20,551; Benevolent Contributions, \$97,041.80. This, as compared with the report of the previous year, shows an increase of one Classis, 18 Ministers, 85 Congregations, 8,619 Members, 7,275 Unconfirmed Members, 1,744 Communicants, and \$77,512.46 contributions for benevolent objects. There are 42 Sabbath Schools less reported, but an increase of 8,147 Sabbath School scholars. Baptisms were 910 less, the Confirmations 649, and Deaths 4. The most prominent feature of

the past year in this Church was the Convention held at Reading, Pa., in May, to close, with appropriate services, the three hundredth anniversary of the adoption of the Heidelberg Catechism. The tercentenary contributions were reported to amount to over \$103,000. These contributions gave a new impulse to the theological and benevolent activities of the Reformed Church in this country. Corresponding services were also held in the Reformed Churches of Holland and Germany.

The General Synod of the Dutch Reformed Church met, on June 1st, at Schenectady, and elected Rev. Philip Phelps, Jr., Moderator. The Church consists of the three Particular Synods of Albany, New York, and Chicago, the latter of which, being of recent origin, furnished this year, for the first time, the President of the General Synod. The Church has highly-flourishing missions at Arcot, in India, and Amoy, in China. The missionaries at the latter place have been for several years requested by the General Synod to establish themselves as a Classis of the Dutch Reformed Church of the United States, while they themselves regard it as better for the interests of their mission to unite for the present with the English Presbyterian missions at Amoy. The General Synod, while adhering to their former views, yet resolved to leave the decision as to the proper time of forming a Classis, to the judgment of the missionaries. The contributions of the Church for foreign missions were reported to be \$21,686, against \$20,742 in 1863, still only 286 out of 422 churches have contributed.

Resolutions were adopted sympathizing with the Government, and thus speaking of slavery:

In time past the General Synod has not deemed it necessary to give forth a judgment in regard to the system of American slavery, inasmuch as it existed in regions beyond the bounds of our Church; yet as in the overruling providence of that God who knows how to make the wrath of man to praise him, there is a prospect opened for the ultimate and entire removal of that system which embodies so much of moral and social evil, and as by such removal there is opened a wide field of Christian labor, to employ the whole Christian Church in this land, the Synod expresses its gratitude to God for this bright prospect, and would join in the prayer that the day may be hastened when liberty shall be effectually and finally proclaimed throughout all the land to all the inhabitants thereof.

REID, DAVID BOSWELL, M. D., F. R. S. E., a Scottish physicist, and writer on chemistry, ventilation, &c., born at Edinburgh in 1805, died at Washington, D. C., April 6, 1863. Dr. Reid received his early education in the High School of Edinburgh, from which he was transferred to the university of that city. His medical course of study was pursued at the university, where his brilliant success as a student made him a great favorite, and he was elected senior President of the Royal Medical Society before he received his medical degree. Soon after receiving his medical diploma he was elected a member of the Royal College of

Physicians, and of the Royal Society of Edinburgh. Engaging, as most of the young physicians of Edinburgh were in the habit of doing, in dispensary practice, he was painfully impressed with the great need of better ventilation in the houses of the poor, and the lessons taught him by his experience there were never forgotten. While a student in the university he had been assistant to Sir John Leslie, then Professor of Natural Philosophy in the university, and after his graduation he had taught independent classes in chemistry, until he was called by Dr. Hope to assist him in his chemical course in 1827, and for five years had the entire charge of the classes of practical and analytical chemistry in the university. In 1832 he determined to resume his independent classes, and erected a class-room and laboratory larger than any in Edinburgh, which he opened in 1833, and for the next seven years had about three hundred pupils annually in his chemical classes. In 1836 he was called to make such alterations in the old House of Commons as should secure its better ventilation, and in 1839 superintended similar changes in the House of Peers. When the Houses of Parliament were burned in 1840, he was called from Edinburgh to direct the ventilation of the new Houses. For five years he continued in this work, though under serious difficulties and constant annoyance from the numerous changes to which his plans were subjected by the builders. He finally refused to be responsible for the success of the ventilation unless his plans could be adhered to strictly, and he himself sustained in enforcing them. As a result of this, the House of Commons, after a sharp contest, accorded to Dr. Reid all that he asked, while the House of Peers withdrew their House from his jurisdiction. He never acted subsequently at the Houses of Parliament, except under protest, gaining a public hearing at the bar of the House of Commons in 1852, and carrying an award against the Government at an arbitration the following year. Dr. Reid was more fortunate in being freed from interference in the application of his plans of ventilation in the construction of St. George's Hall, Liverpool, the largest public building in that city, containing upwards of one hundred rooms, the ventilation of which was perfect even when most densely crowded. His plans were also introduced into numerous public buildings, manufactories, and private habitations.

His system was based upon a new estimate of the quantity of air required for respiration, and of the varied circumstances that modified this amount. Its leading features in public buildings consisted in his treating the whole structure as a piece of apparatus, and securing, whenever necessary, the power by engines, shafts, or otherwise, of introducing an atmosphere with the most gentle possible impetus, with the greatest diffusion practicable, and of the quality in respect to temperature and moisture best adapted to the wants and numbers of

the audience, while the most scrupulous care was observed in taking the air from the purest accessible source, and in reducing the amount of impurities when present in such quantities as to require attention. He made ventilation a primary instead of a secondary question. His difficulties in securing thorough ventilation and pure air in the old House of Commons, which had the river Thames, with its noisome vapors on one side, a pestilential graveyard on the other, and a hundred and fifty offensive factories in the immediate vicinity, forced the question of sanitary improvement upon his attention, and in 1842 he was appointed one of the "Commissioners to inquire into the state of large towns and populous districts in England and Wales," better known as the "Health of Towns' Commission." In this capacity he gave, under the sanction of the Privy Council, a course of lectures at Exeter Hall to one thousand teachers on the necessity and means of improving the sanitary condition of densely-populated districts. He also visited and superintended the introduction of improved methods of ventilation and sewerage in most of the cities of the United Kingdom, especially in court-houses, churches, schools, ships of war, prisons, and tenement-houses. He also made a report to Government concerning the better ventilation of mines. So zealous a sanitary reformer could not fail to arouse the dislike and hostility of those who had a vested interest in the wrongs which he so fearlessly exposed; and it is no matter of wonder that the "London Times" always the organ and defender of hereditary and privileged abuse, should have sought, by the most reckless falsehoods and malignant misrepresentations, to crush him. In this effort it was unsuccessful; its falsehoods and slanders, though never retracted, were nulled to the counter by the reports of the Committees of the House of Commons, the investigations of the Admiralty and the civic authorities, and the testimony of the most eminent men of the nation, and in the end Dr. Reid gained in reputation from the abuse of the "Times." Having occasion to visit St. Petersburg, on a mission connected with the ventilation of some of the Government buildings there, Dr. Reid received letters from Lord John Russell to the Russian authorities, and was received with great attention by the Emperor Nicholas, and requested to direct the ventilation of the public buildings and vessels of war. The present Emperor subsequently charged him with the application of his system of ventilation to the war steamer *General Admiral*, built in New York.

In 1856 Dr. Reid came to the United States, bearing official letters to the President from Lord John Russell, and interested himself on the subject of quarantine and on the improvement of the sanitary condition of our large cities. He subsequently removed to the West, and after filling for a time a professorship of applied chemistry in the University of Wisconsin, made his residence at St. Paul, Minn. His

admirable qualifications for such a service led the U. S. Sanitary Commission to select him as one of its medical inspectors. He entered with great zeal upon his duties, and was of eminent service to the army in urging and securing larger camping grounds, better ventilation in the tents, and a more efficient sanitary police in the camps and hospitals, as well as in the direction of the necessary supplies to supplement the Government provisions for the sick soldiers. While engaged in this benevolent work he was seized with congestion of the lungs, and died at Washington after a brief illness.

The following list comprises Dr. Reid's principal works: "An Introduction to the Study of Chemistry," Edinburgh, 1825; "Rudiments of the Chemistry of Daily Life," Edinburgh, London, and New York, many editions, 1836-1854; "Text-Book for Students of Chemistry," three editions, Edinburgh, 1834-1839; "Elements of Chemistry, Theoretical and Practical," three editions, Edinburgh, 1832-1839; "The Study of Chemistry as a General Branch of Education," two editions, London, 1842; "Illustrations of Ventilation," London, 1844; "Ventilation of the House of Commons," printed for the Government, 1837; "Ventilation of the Niger Steamships," printed for the African Colonization Society, 1841; "A Reply to the *Times* and *Athenaeum*," London, 1846; "Ventilation of St. George's Hall, Liverpool," printed for the corporation of Liverpool, 1855; "Ventilation in American Dwellings," New York, 1858 and 1863; "A Short Plea for the Revision of Education in Science," St. Paul, 1861. In addition to these he had contributed the article "Ventilation" to the *Encyclopedia Britannica*, and numerous papers to scientific journals in Great Britain and the United States, and to the publications of the Smithsonian Institution, the U. S. Sanitary Conventions, and to Parliamentary and Legislative documents.

REVOLVING TURRETS constitute the essential feature of American armored vessels. The principle seems equally applicable to land fortifications. The inventor of this system is Theodore R. Timby, who was born in Dutchess County, N. Y., April 5th, 1822. He received the school and academical education usual for the sons of substantial farmers. The natural bent of his mind was toward mechanical inventions. When only sixteen years old he constructed a model, substantially like those now in use, of a floating dry dock; this was submitted to persons whom he supposed capable of deciding upon its practical value. They admitted the idea to be ingenious, but said that its execution was impracticable. The invention was dropped. Years after it was reinvented by others; but the floating docks now in use contain nothing essential which was not involved in the invention of the young resident of a country village. Another invention, an improvement upon the turbine water-wheel, proved useful and profitable. In all, Mr. Timby has obtained patents for more than a score

of valuable inventions. The most important of these is that of the Revolving Turret, as applied to naval and military purposes. The idea of this was conceived while he was a mere boy. The original model, constructed in 1841, and still in his possession, contains the germ of the whole invention. On the 18th of January, 1843, he filed his first caveat for the invention in the United States Patent Office. The specifications were "for a Revolving Metallic Tower, and for a Revolving Tower for a Floating Battery to be propelled by steam." It would be difficult, in so few words, more clearly to describe our "monitors" and the whole class of turreted vessels which has succeeded them. Meanwhile he had been engaged in constructing a large iron model. This was completed in the spring of 1843, and was publicly exhibited in New York and elsewhere. This is on record in the New York "*Herald*" and "*Evening Post*" of June 7th, 1843, and in many other newspapers of the time. For some years he continued to develop his invention still further, and filed additional specifications in the Patent Office. He made several models, one of which was presented to the emperor of China by our minister, Mr. Cushing.

Mr. Timby, from 1843 onwards, pressed his invention upon the attention of the American Government. Its practicability was admitted, but it was assumed to be wholly superfluous. The existing fortifications, it was said, were far more than were necessary. Once indeed, in July, 1848, a favorable report was made to Mr. Marcy, then Secretary of War, by Jefferson Davis, D. L. Yulee, F. H. Elmore, and Dixon H. Lewis, endorsed by Col. Bumford, Chief of the Ordnance Bureau. This official recognition is some years anterior to the time when Capt. Coles claims to have invented the turret. When the rebellion broke out, Mr. Timby sprang to the development and practical application of his favorite invention; he constructed a fifth model, embodying all the improvements to which he had devoted the energies of eighteen years. The patents which he had secured covered the broad claim "*for a Revolving Tower for Offensive and Defensive Warfare, whether used on land or water.*" When therefore the "monitors" were to be built, the constructors at once recognized the validity of his claim, and paid him a liberal sum for the right to use his invention. These facts prove incontestably that he is the inventor of the revolving turret.

The general advantages of the revolving turret, even as already constructed, are apparent. It not only affords perfect protection to the guns and gunners, but enables each gun to be brought to bear upon every point of the circle within its range. But the turrets hitherto built embody only a small part of their offensive power as developed by the inventor. To explain this it will be more convenient to consider a turret for a land fortification, where

revolving by the gearing E, upon the friction rollers G, G,
reducing from the common centre
of shafts A, B, by means of the rod and gearing D; on the left of the shaft is seen the screw-driver, forming the
axis passing to each gun.

for stores and munitions.

there is no limit to the possible size and thickness. The illustration on page 722 represents a cordon of three of these turrets arranged for the protection of a harbor. They are supposed to be one hundred feet in diameter, with two tiers of guns. They rest upon a structure of iron-clad masonry, in which are contained the magazines and steam engine. The diagram on page 720 presents a sectional view of a turret, cut down vertically through the centre so as to show the interior arrangements. Directly under the dome-shaped roof is a platform resting upon a central shaft, which revolves independently of the turret, and not by means of the steam engine. This is the station of the commander during action. In the roof is a narrow opening through which, by means of a fixed telescope, he keeps watch of the enemy. At his hand is a wheel, connected by rods and gearing with the shaft so that he can turn the platform in any direction, and thus keep his telescope always pointed upon the object of attack. If this moves, he follows it, precisely as a sharpshooter with a telescopic rifle follows the course of a moving object. By an arrangement of signals he can also give any directions for the management of the vessel or of the guns. As the turret revolves each gun is for an instant brought in the course of every revolution directly in a line with the commander's telescope. If the gun is discharged at that instant, the ball must go straight to its mark. Provision is made for doing this with unerring certainty. Each gun in the act of passing under the vertical line of the telescope, is discharged by means of an electric current. This telescope being held pointing to the object of attack, every gun in the battery is really aimed by the commander. This automatic sighting and discharge are essential features of the invention; they obviate the uncertainty of aim, which is the main objection against the towers heretofore built. The commander aims and discharges every gun in his battery; the gunners have only to load, run the piece to the port-hole, and place the fuse in the vent. This can be done in one minute. A turret of one hundred feet in diameter will give ample space for sixty guns in two tiers. If it revolves once a minute, which is equal to about three and a half miles an hour, its effective fire is sixty guns in a minute directed with unerring aim upon any point of the circle—an offensive power greater than that of any fortress in the world. For defensive power, such a turret can be made absolutely invulnerable. The "monitor" turrets are from nine to thirteen inches thick; but in a land turret, if one foot is not sufficient, there may be two or five. The only limit is the crushing weight of the structure upon the steel rollers on which it revolves.

The main purpose of a land turret is for harbor defence. The illustration on page 722 shows the adaptation of a cordon of turrets for the protection of the harbor of New York. The point of defence is supposed to be the

Narrows, where the channel is about one-fourth of a mile wide. A tower is built upon each shore, and another is placed midway. An enemy approaching would be exposed, from the moment he came within range, to the concentric fire of these three forts, each capable of delivering sixty shot in a minute with an accuracy hitherto unknown in gunnery. To pass these forts he must come, with broadsides exposed, within one-sixteenth of a mile of the muzzles of one hundred and twenty guns, aimed with the precision of a telescopic rifle. Should he succeed in passing, his stern would be exposed, so long as he continued within range, to the fire of all the towers. The guns may be of the largest calibres, for it has been demonstrated that the heaviest ordnance can be discharged within a turret with less inconvenience than from the casemate of a fortress. It would seem that nothing that can float could sustain this fusillade for a quarter of the time in which the swiftest steamer would be exposed to it. A single hostile steamer once within range of New York, Boston, or San Francisco, could impose its own terms. To this system of turrets Mr. Timby therefore proposes to add a series of chains. These stretch from turret to turret, and are attached to windlasses turned by the steam engine within. Buoys are fastened to the chains, leaving their specific gravity just sufficient to sink them. In time of peace they lie quietly on the bottom, presenting no obstruction to navigation. On the approach of an enemy they are drawn up, not *taut*, but so as to hang swaying in the water at such a depth as to prevent the passage of a vessel; the greater part of their weight being supported by the buoys, almost their entire tensile strength is available as a barricade. These chains may be of any required size and number. They possess the character of an immense iron raft, sufficiently submerged to be wholly out of the reach of an enemy. The most powerful steamer striking them would merely sway them back, while its own momentum would be destroyed, and it would be helpless under the guns of the turrets. Outside of these chains it is proposed to stretch a line of torpedoes attached to a chain from tower to tower across the channel. These can be drawn directly under the vessel while detained, and exploded at the precise instant desired by the discharge of an electric current. This obviates the great practical defect in all systems in which torpedoes have been employed, that the discharge is a matter of chance. The diagram on page 722 shows the details of the system of turrets, chains, buoys, and torpedoes, which combines in itself all the elements of defensive warfare hitherto employed. Its cost for construction and maintenance must be less than that of stone fortresses. The defensive works of Charleston cost more than would be required to render New York impregnable to the combined navies of the world. Masonry having been shown to be useless against modern artillery, the sole

reliance must be upon earthworks and iron. Earthworks being liable to be captured by escalade, must be defended by a force nearly as great as the attacking one; and iron, it is believed, can in no way be as advantageously used as in the system of turrets and its adjuncts.

The plan for revolving turrets for vessels proposed by Mr. Timby is essentially the same as for those built upon land, modified only by the fact that there is a limit to the size and weight of a turret which can be borne by a vessel. The essential features of the automatic sighting and discharge are equally applicable to both.

ORDON OF REVOLVING TOWERS AND GEARING FOR HARBOUR DEFENCE.

The annexed diagram presents the section of a naval tower designed by Mr. Timby. It is supposed to be forty feet in diameter, giving space for six guns. Revolving once a minute, its capacity would be one shot in ten seconds—more than can be delivered continuously from any vessel afloat. Another important feature is shown in this diagram. The turret is sunk

about one-third of its height below the deck. It must have an interior height of about nine feet to give space for the working of the guns. But as there never can be any occasion to depress the piece below a horizontal line, the guns may be on a level with the deck. The carriage may as well be below as above. There need be only enough above deck to give the

SECTION OF HULL AND NAVAL TOWER.

port-holes height for the requisite vertical range; six feet is abundant for this. The chance of a turret being hit would thus be diminished one-third, and the seaworthiness of the vessel would be increased by bringing the weight so much nearer to the line of flotation. Moreover, as one-third of the turret would be protected by the side armor of the vessel, this portion could be made much lighter. The weight of the turret could be diminished fully a quarter. What, however, is of still greater importance, the one vulnerable point in the monitors as originally built is thoroughly protected. This vulnerable point is the plane upon which the turret revolves, which has been placed on the deck. The elaborate "Report upon Armored Vessels," made by the Secretary of the Navy in April, 1864, is conclusive as to the superiority of turreted vessels. The valuable qualities of these vessels was further demonstrated in the capture of Fort Fisher.

RHODE ISLAND. Although one of the least of the States of the Union, Rhode Island has engaged in the war as heartily for her power as the largest. Her contributions to the Federal army, from the commencement of hostilities to Dec. 31, 1864, were about 22,707; as follows:

Three years' men (volunteers).....	12,300
" " (drafted).....	103
" " (substitutes for drafted men).....	677
One year's men (volunteers).....	261
Nine months' men (volunteers).....	2,227
Three months' men (volunteers).....	8,144
U. S. and regiments in other States.....(about)	300
United States Navy.....(about)	2,000

The number of men furnished from May 26, 1863, to Jan. 27 1865, was as follows:

In the year 1863.....	2,005
" " 1864.....	1,322
" " 1865.....	122
	<hr/> 3,530

During this period there were also enlisted:

In the regular army, &c.....	413
Veterans reenlisted in the field and credited to Rhode Island.....	1,118
For the Navy, estimated.....	506
	<hr/> 2,037

Average, 64 men enlisted a week.

During this period the United States Government has called upon Rhode Island to furnish as her quota 12,398 men, as follows:

June 30, 1863, the call for 800,000.....	2,830
Feb. 1, 1864, " " 500,000.....	2,400
March 14, 1864, " " 300,000.....	1,388
July 13, " " 500,000.....	8,197
Dec. 19, " " 300,000.....	1,439

By a draft in July, 1863, credits in men and commutations, amounting to 1,296, were realized. For naval enlistments, extending back to 1861, about 1,500 were allowed, and in credits 1,800 for men enlisted prior to 1863, making the State deficient at the close of the year 1,459 men.

An amendment to the State Constitution, so as to permit soldiers to vote, was submitted to the people early in the year, and a vote exceeding the requisite three-fifths was given for it. This secured its adoption. At the same time there was submitted to the people an amendment of the Constitution to permit unnaturalized citizens to vote who had served in the war. This lacked sixty-four votes of the requisite three-fifths majority. It was therefore rejected, as was also an amendment to abolish the registry tax.

An election for Governor was held in March. The candidates were James Y. Smith, Republican; Geo. H. Brown, Democrat; and Amos O. Barstow, Conservative. The vote was as follows: Smith, 8,840; Brown, 7,302; Barstow, 1,889; majority for Smith over Brown, 1,588; ditto over Brown and Barstow 199.

The legislature elected was divided as follows:

	Senate.	House.
Republicans.....	28	55
Democrats.....	9	18
Republican majority.....	14	37

The vote at the Presidential election was as follows: Lincoln, 13,692; McClellan, 8,470. Majority for Mr. Lincoln, 5,222.

The finances of the State are represented by the Governor as "in a satisfactory condition." All the loans authorized by the legislature, amounting to \$4,000,000, had been negotiated on favorable terms. The State had ample means to meet all immediate claims upon her, through the considerable sums due from the Federal Government, which it was expected soon to realize. The expenses attending the call for troops in December were not included in this estimate.

The Governor recommended to the legislature to enact some measures which should secure to the banks of the State additional privileges in their exchanges, as under the new burdens imposed by taxes upon circulation and deposits the business of banking was scarcely remunerative. He recommended the privilege should be granted to such as became National banks, to resume their chartered rights under their old organization at any period they might elect.

On Dec. 8th some wealthy citizens were arrested by order of the Federal commander of the Military Department, under charges of having furnished supplies to the enemy. The proceedings of the Governor relative thereto he thus states:

On the 8th of December, 1864, by order of Major-Gen. Dix, commanding the Department of the East, several of our citizens were arrested and removed beyond the limits of the State. It became the duty of the Executive to inquire into the authority and reasons justifying such a procedure; this was done personally. As the result of the inquiry, it appeared that the offence charged was within the exclusive cognizance of the officers of the General Government, and nothing further could be effected than to secure the assurance of an early investigation, which it is to be hoped will result in establishing the innocence of the parties charged.

The apparent commercial prosperity of the State continues as favorable as during any previous period of her history.

RICE, JAMES CLAY, a brigadier-general of United States volunteers, born at Worthington, Mass., Dec. 27, 1829, died from wounds received at the battle near Spottsylvania Court House, May 11th, 1864. His early life was spent in a struggle to obtain an education, and in 1854 he graduated at Yale College, with high honors. Shortly afterwards he went to Natchez, Miss., where he engaged in teaching, and edited the lit-

erary department of one of the local newspapers. He also pursued the study of law, and was admitted to the bar in that State. Returning to the North he continued his legal studies in New York, and in 1856 entered upon the practice of his profession, in which he was rapidly rising to distinction. At the outbreak of the war he entered the ranks as a private soldier in the New York Garibaldi Guard, and subsequently, by distinguished merit, attained the colonelcy of the 44th New York volunteers, or Ellsworth's regiment. He led this regiment through the battles of Yorktown, Hanover Court House, Gaines's Mill, Malvern Hill, and Manassas, and was only absent from Antietam because on a sick-bed with typhoid fever. He was also at Fredericksburg under Gen. Burnside, at Chancellorsville under Gen. Hooker, where he was temporarily in command of a brigade, and at Gettysburg, where he greatly distinguished himself by his skill and gallantry. It was his brigade which, on the second day of the battle, held the extreme left of the line successfully under the repeated and desperate onsets of the enemy. For three hours Col. Rice fought incessantly, receiving no orders from any superior officer, arranging and disposing of his men with such skill and judgment that at the close of the day's fight he had extended his line so as to cover Round-Top Mountain, thus securing it against any flanking movement. For this and other gallant deeds he was warmly commended by Gen. Meade, and earnestly recommended by him and Generals Hooker and Butterfield, for the appointment of brigadier-general of volunteers. The President acquiesced in the wishes of these officers, the Senate confirming the appointment, and dating his commission from Aug. 17, 1863. In this position he took part in the operations of Mine Run, passed through the terrible battles of the Wilderness, and met his death, at the head of his command, on the banks of the Po. He died shortly after amputation had been performed, his last words being, "Turn me over that I may die with my face to the enemy." Gen. Rice was a man of deep religious principle, a brave and skilful officer, and thoroughly devoted to his country.

RIVES, JOHN C., an American editor, born in Kentucky about the year 1796, died near Georgetown, D. C., April 10, 1864. His early opportunities for an education were very limited, and he was thoroughly a self-made man. In 1824 he removed to Washington from Edwardsville, Illinois, where he was a bank cashier, and entered upon a clerkship in the Fourth Auditor's office. During the early part of Gen. Jackson's administration, Mr. Rives, in connection with Frank Blair, sen., founded "The Congressional Globe," of which he had been sole proprietor for three years previous to his death. He was never a partisan, and although on important national questions agreeing in the main with Jackson's policy, he recognized the merit of that urged by the opposite party. In his public and private benefactions he was noble

and generous in the extreme, yet wholly without ostentation. In a single year his books report contributions of \$17,000 to the support of the wives of soldiers enlisted in the district, besides innumerable gifts in smaller amounts to individuals. He also gave \$12,000 toward the equipment of a regiment.

ROMAN CATHOLIC CHURCH. It is estimated by intelligent and judicious investigators that there are on an average two thousand Roman Catholics to each priest in the United States. On this calculation there were, in 1860, 4,400,000 Catholics in the United States. The increase has for many years been much more rapid than the increase of the nation. It appears that in 1808 there was only one Catholic to sixty-eight Protestants; in 1830, one to twenty-nine; in 1840, one to eighteen; in 1850, one to eleven; in 1860, one to seven. That is, the increase between 1840 and 1860 was 125 upon each hundred, while the nation only increased by thirty-six to a hundred; between 1850 and 1860 the increase was one hundred and nine upon a hundred, while the nation increased only thirty upon a hundred. Should things go on only as they have hitherto done, the Catholic will be one-fifth of the whole population in 1870, and nearly one-third before 1900. According to the "Catholic Almanac for 1865" the United States had, in 1864, 7 archbishops, 87 bishops, 5 vicars apostolic, and 8 mitred abbots, and in those dioceses from which reports were received, 2,330 priests.

The completion of the new St. Paul's and St. Peter's Cathedral in Philadelphia gives to the Roman Catholics the largest church edifice in the United States. The consecration was celebrated, on Nov. 20, with the most imposing effect. More than seven hundred priests participated, and the ceremonies were witnessed by about eight thousand people. Among those participating were Archbishops Spaulding, of Baltimore, Purcell, of Cincinnati, and McCloskey, of New York, the bishops of Boston, Buffalo, Brooklyn, Burlington, Vt., Newark, Canada, Fort Wayne, Ind., Hartford, Pittsburg, Toronto, Halifax, and the mitred abbot of St. Vincent's at Latrobe. The bishops proceeded from the Episcopal residence in full vestments, with mitre and surplice, through Logan Square, followed by the priests, to the cathedral, the choir chanting *Te Deum*. The usual ceremonies were then proceeded with, Bishop Wood, accompanied by the priests, sprinkling the foundation and walls with holy water, etc. After the customary forms on such occasions, including the Pontifical mass, had been concluded, Archbishop Spaulding, of Baltimore, delivered an impressive sermon. The cathedral is the work of eighteen years' labor, and cost nearly \$500,000.

One of the most important events in the modern history of the Roman Catholic Church, is the Encyclical Letter, addressed, on Dec. 8, 1864, to all Catholic bishops. (*See PUBLIC DOCUMENTS.*)

This document, it appears, was drawn up and discussed some time ago by a body of learned ecclesiastics, and subsequently debated at the Congregation of the Holy Office. The condemned propositions were forwarded to the most erudite prelates of the Catholic Church for their opinions, and when returned again carefully gone over paragraph by paragraph by the Pope and the cardinals. The idea is believed to have originated with Monsignore Gerbet, the bishop of Perpignan, who forwarded a letter to the Pope in 1860, containing the draught of the obnoxious propositions. The bishop has not lived to see the completion of his task.

The Encyclical letter produced a profound sensation throughout the civilized world. On the part of the clergy it found a general adhesion, yet some of them expressly made the reservation that they did not consider themselves obliged by the encyclical to condemn modern civilization. The Archbishop of Baltimore, in a pastoral letter to his clergy, expressed a belief that the encyclical letter was directed against the infidels of Europe, but did not condemn the institutions of the United States. The Archbishop of Paris issued a pastoral letter, in which he called upon the Pope to give his blessing to modern civilization, after having pointed out its errors.

The concurrence of the college of cardinals with the sentiments of the papal encyclical was not quite so unanimous as that of the bishops. Cardinal d'Andrea secretly left Rome, and proceeded to Naples, where he paid a visit to the crown-prince Humbert, and declared himself in favor of Italian unity. With regard to the encyclical he openly admitted in a conversation with the correspondent of a daily paper of Paris, "Le Temps," that he regretted its publication, and did not subscribe to all its sentiments. It was stated (by Catholic as well as Protestant papers) that six other members of the sacred college agreed, in the main, with Cardinal d'Andrea.

The Catholic press of the world showed an entire unanimity in a respectful acceptance of the encyclical. No avowedly Catholic paper of Italy, France, Spain, Portugal, Belgium, Austria, Bavaria, or any other Catholic or Protestant country is known to have uttered a word of dissent. Some papers, which had previously advocated a reconciliation between the Church and modern society, qualified their adhesion by the reservation, that they accepted the encyclical in the sense of those bishops who did not find in it a condemnation of modern civilization.

None of the great Protestant countries of the world—the United States, England, Prussia, Holland, Sweden, Denmark—put any obstacles in the way of the publication of the encyclical. Most of the Catholic Governments of Europe were for a time seriously embarrassed with regard to it. The Government of France concluded to allow only the official proc-

lamentation by the bishops of the last lines of the encyclical letter which proclaimed a general jubilee, but to prohibit the publication of all the remainder. Austria, in accordance with the stipulations of the concordat, transmitted a copy of the encyclical to every bishop, but it expressly declared in the official gazette of Vienna, that it did not wish this act of mere mediation to be understood as an approval of the sentiments of the court of Rome. Italy also concluded to allow the publication, but made the same reserve as the Government of Austria. In Spain, the bishops had promulgated the encyclical without previous authorization. The Government declared that this was contrary to the laws of Spain, but that in this particular case no action would be taken on the offence.

The reception of the Encyclical on the part of the political press and the legislatures in the Catholic countries, was decidedly unfavorable. In France, most of the imperialist papers, including "La France," the only one among these papers considered friendly to the Church, deplored the publication of the circular, as in their opinion likely to widen the breach between the Church and modern Society, which they all profess a desire to reconcile. Among the liberal papers of France there is hardly a single one which pretends to believe in the possibility of a reconciliation between the Roman Catholic Church and civilization. They say, without regret, that the circular will greatly hasten the emancipation of the people from the Church, and that in particular it will tend to bring about a complete separation between Church and State, as in the United States. The combined strength of the imperialist and the liberal opposition parties, may be inferred from the fact that in the legislative body, which numbers two hundred and eighty-three members, and is elected by general suffrage, not more than about twenty members are found on the side of the Church whenever the claims of the latter are opposed by the Government. Of the total population of France, which on 31st December, 1861, amounted to 37,472,782 souls, only about 1,700,000 were estimated as non-Catholics.

In Austria, according to the census of 1857, there were in a total population of 35,018,988 souls, about 8,500,000 non-Catholics. Of the periodical press of the country, according to statements made by prominent Austrian Catholics at the Catholic congresses of Germany, more than five-sixths are decidedly anti-Catholic. They have again shown themselves thus in discussing the Papal bull. In the Austrian Reichsrath an overwhelming majority of the lower house persists in demanding entire religious liberty to be inserted among the fundamental principles of the constitution.

Italy, with a population of about twenty-two millions of people, was until a few years ago considered a purely Catholic country, tolerating with reluctance a few congregations of Waldenses and a few thousand Jews. Now the

lower house of the Italian Parliament contains among its members less than half a dozen members who in ecclesiastical questions support the views of the Pope. The overwhelming majority have but recently repeated their desire to aid in the abolition of the temporal power of the Pope, and in the annexation of the papal territory to Italy. The sentiments of the majority of the press and the members of Parliament are expressed by the "Nazione," the leading paper of Florence, the present capital of Italy, when it remarks: "The position of the papacy and the Church is determined, therefore, by the circular: war without truce and without armistice between the papacy and modern civilization."

Spain, a country with about sixteen millions inhabitants, still proscribes the public exercise of every non-Catholic Church. Public opinion in Spain is more influenced by the Roman Catholic Church than in any other country of Europe. Still the progressive party, which is very numerous, which last year carried a large number of municipal elections, and feels confident that it would easily obtain a majority in the Cortes under a liberal electoral law, is unanimous in demanding universal religious liberty, and in rejecting the views of the Pope. The "Pueblo," one of the leading democratic papers of Madrid, regrets "the obstinacy and blindness manifested by the court of Rome in branding and condemning modern civilization." "From Rome," it says, "nothing favorable to freedom can ever be expected."

Portugal, which has about four millions of inhabitants, is still as exclusive in its ecclesiastical legislation as Spain, but public opinion is much less under the control of Rome. In the last Parliament about one-third of the House of Representatives supported the demands of the Pope in his controversy with the crown of Portugal. The majority of the Portuguese papers call upon the Government not to allow the bishops to promulgate the Encyclical.

In no country of Europe did the publication of the Encyclical produce a more violent commotion than in Belgium. The constitution of this country, which is almost exclusively inhabited by Roman Catholics, expressly guarantees to every citizen personal freedom and liberty of conscience. Both the great political parties of that country, the "liberal" and the "Catholic," profess an equal loyalty to the constitution. The "Monde" of Paris, has always represented the fundamental principles of the Belgian constitution as irreconcilably opposed to the spirit of the Catholic Church. The "Catholic" party of Belgium have generally avoided the discussion of the principle of their constitution, but insisted that for their country it was an accomplished fact, and that they did not intend to abandon it. They adhere to this view in defining their position relative to the Pope's circular. Thus "La Paix," of Brussels, one of the leading Catholic papers of Belgium, argues that the Pope means to say that truth

is only one, that error cannot claim the same right as truth, nor vice the same right as virtue. It expresses its full concurrence with these views, and maintains that dogmatically the Pope must be intolerant. It then continues: "The question at issue is the eternal question to know to what extent the civil law must conform to the religious law, to what extent the precepts of the catechism must be sanctioned by the codes. Rigorous theologians, like the Jesuits of Paraguay, have pretended that it was allowed and useful to compel the citizens by penal laws to observe the catechism." Those who thus thought and acted went too far, in the opinion of "La Paix," and it therefore thinks that, "logically and from a religious point of view, the Catholic legislator is no more bound to repress by law the abuses of the liberty of the pen against God than the abuses of the liberty of speech against God." Other Catholic papers of Belgium insist that at the time of the adoption of the Belgian constitution, Belgium was not truly a "Catholic" country, but that an anti-Catholic liberalism was so strong that concessions had to be made to it.

The liberal papers of Belgium reply that, all the arguments used by the Catholic organs class the liberal institutions with things not desirable in themselves, and would endanger their continuance in countries where the Government and a large majority of the people would view them in the light of the Papal circular. They, therefore, ask the question, What would the Catholic party of Belgium do if they knew that they represented an overwhelming majority of the voters? There seems to be with regard to this point, a slight difference of opinion among the Catholic party of Belgium. Only a few openly indicate that they would, if they had the power, conform to the teaching and the example of Rome. The "Bien Public" of Ghent compares the constitution of Belgium with that of Rome, and does not conceal its preference for the latter. Other papers equally admit that if the Pope should demand any definite action on their part, though not consistent with the constitution of Belgium, it would be their duty to obey the head of the Church.

Catholic congresses were again held in 1864, as in the preceding year, in Belgium, Germany, and Switzerland. That of Belgium again attracted the greatest attention. It met, as in 1863, in Malines, on Monday, August 29th, when about 4,000 persons were present, including the notabilities of the Belgian Catholic party, with distinguished persons from various countries in Europe. The proceedings commenced by a speech from the Archbishop of Malines, after which the bureau was formed, Baron de Gerlach being appointed president, as on the former occasion. The president then delivered a long address on the subject of the general situation of Catholicism in Europe, and particularly in Belgium; and the first day's sitting was brought to a conclusion by a vote

of devotedness to the Pope, which was immediately forwarded to Cardinal Antonelli to be presented to his holiness. Among the subjects discussed by the Congress were: religious works; charitable works; Christian instruction and education; literature and fine arts from a Christian point of view; religious music; religious liberty; publications and associations. Count Montalembert, who, in 1863, made at the Catholic congress the celebrated address on religious toleration, was not present. "His harangue," an English Catholic paper says, "gave serious offence at Rome; and though the illustrious Bishop of Orleans spent several months in the Eternal City last winter, during which his great influence there was not spared in order to remove the unfavorable impression against his friend, I believe I may say that the effort was not altogether successful." This year the most impressive speech was made by Bishop Dupanloup of Orleans, who stated that the chief reason why he came to Belgium was his wish to comfort his brethren for the defeat they had received at the late election. (*See BELGIUM.*) It was the general opinion of the Catholic papers of Europe, that the Congress of 1864 could stand no comparison with that of 1863.

RUSSIA, an empire in Eastern Europe and Northern Asia. Emperor: Alexander II., born April 17 (new style, April 29), 1818, the eldest son of Emperor Nicholas I., succeeded to the throne at the death of his father, Feb. 18, (March 2), 1855. Heir apparent to the throne is Grand-duke Nicholas, born Sept. 8 (Sept. 20), 1843. The Government of Russia is an absolute hereditary monarchy. According to a decree of the Emperor Paul, of the year 1797, the law of succession to the throne is to be that of regular descent, by the right of primogeniture, with preference of male over female heirs. Every sovereign of Russia, his wife and children, must belong to the orthodox Greek Church. The administration of the empire is intrusted to four great boards or councils, possessing separate functions, but centring in the private cabinet of the Emperor. These boards are: I. *The Council of Empire*, established by Alexander I., in 1810, and numbering, in 1863, sixty-three members, exclusive of the ministers who have a seat *ex-officio*. It is subdivided into five departments of Legislation, of Military Affairs, of Civil Administration, of Finance and Political Economy, and of the Administration of the kingdom of Poland. II. *The Directing Senate*, established in 1711. This is the high Court of Justice for the Empire; controlling all the inferior tribunals. It is divided into eight committees or sections, of which five sit at Petersburg and three at Moscow. III. *The Holy Synod*, composed of the principal dignitaries of the Church. IV. *The Council of Ministers*. It is divided into twelve departments: 1. Imperial House; 2. Foreign Affairs; 3. War; 4. Navy; 5. Interior; 6. Public Instruction; 7. Finance; 8. Justice; 9. Imperial Domains; 10. Public Works; 11. Post-Office; 12. General Control.

The Nobility of the Empire have been, since 1785, in possession of the right of holding representative assemblies every third year. According to the Imperial Patent issued in that year by Catherine II., the nobles in every province form a corporation under an elective president or marshal, to whom is joined a government commissioner. The governor of the Province is not allowed to be present at the meetings. These representative assemblies have their own seals, archives, secretaries, treasurers, and permanent committee, the latter of which will unite with deputies of the towns to examine the estimates and allotment of contributions to be made by the country. These assemblies have recently become of greater importance than they were formerly. Those in the western provinces of Russia, where nearly all the nobles are of Polish descent, took an active part in the national movements of the kingdom of Poland. More recently, several assemblies of Russia proper petitioned the Emperor for the introduction of a representative form of Government into Russia.

The Russian Empire comprises one-seventh of the territorial part of the globe, and about one twenty-sixth part of its entire surface. The area of the empire, according to an estimate made by Mr. Keppen of the Academy of Sciences of Petersburg, is as follows:

	Area in geographical sq. miles.	Population.
Russia in Europe	90,117	59,880,753
Northern Asiatic Russia	223,780	4,070,983
Southern Asiatic Russia	3,123	4,008,766
Grand Duchy of Finland	6,400	1,724,198
Kingdom of Poland	2,820	4,790,879
American Colonies	17,500	73,375
	843,240*	78,992,873

As to religious denominations, the population of European Russia and of Siberia is divided as follows:

RELIGION.	European Russia.	Siberia (Asiatic)
Orthodox Greek	49,809,891	3,623,704
Schismatics (Rascouniki)	759,880	62,583
Armenian Catholics	83,804	10
Roman Catholics	3,900,228	5,740
Protestants	1,952,117	3,154
Jews	1,425,784	7,077
Mohammedans	2,321,679	1,044,765
Pagans	197,873	280,950

The religious statistics of Caucasian Russia have not yet been ascertained. In Finland, the orthodox Greek Church had, in 1860, 40,161 souls; nearly all the others were Lutherans. Russia proper has three cities with a population of more than 100,000: St. Petersburg, with 520,181; Moscow, with 336,370; Odessa, with 104,169. It has eight cities with a population from 50,000 to 100,000; forty-three cities with a population from 20,000 to 50,000; and 101 cities with a population from 10,000 to 20,000.

A budget containing all the receipts and ex-

penditures was for the first time published in 1863. The receipts and expenditures were estimated in it as follows:

Receipts.

I. ORDINARY:	Roubles.
1. Imposts—	
Direct taxes	42,229,331
Indirect taxes	106,157,139
2. Royalties	12,654,686
3. Revenue from public domains	50,700,313
4. Miscellaneous	26,675,944
5. Revenue from Trans-Caucasia	3,051,393
Total	513,590,444
II. Extraordinary receipts	15,797,779
III. Receipts for special purposes	12,328,448
	541,567,500

Expenditures.

I. ORDINARY:	Roubles.
1. Public debt	57,487,217
2. Supreme State bodies	1,145,975
3. Orthodox clergy	3,128,316
4. Imperial household	7,733,444
5. Foreign Affairs	2,102,000
6. War	115,493,809
7. Navy	18,623,739
8. Finances	87,219,739
9. Imperial domains	9,149,680
10. Southern Colonies	57,479
11. Interior Department	8,545,344
12. Public Instruction	5,839,715
13. Roads, public works, &c.	18,144,121
14. Post Department	822,969
15. Justice	6,266,511
16. Imperial Register	229,639
17. Trans-Caucasia	3,946,119
18. Costs of collection	82,597,573
	530,593,414
II. Delinquent receipts	4,000,000
III. Expenditures covered by special receipts ..	12,328,448
	547,567,500

According to an official statement, the consolidated public debt amounted on January 1, 1862, to 556,141,949 roubles, and the floating debt, on Jan. 1, 1861, to 1,062,648,719 roubles.

The exportations amounted, in 1861, to 177,179,000 roubles, and the importations to 167,111,000. The number of arrivals in the Russian ports was, in 1861, 10,684 vessels, with a tonnage of 1,024,103, and the number of clearances, 10,739 vessels, with a tonnage of 1,025,972. Of the arrivals, 1,956 were British vessels; 1,884 Russian, 1,468 Turkish, 768 Netherlandish, 752 Italian, 558 Norwegian, 483 Danish, 440 Hanoverian, 2,879 of different nations. The merchant marine numbered, in 1859, 1,416 vessels, with an aggregate tonnage of 172,605 tons, and manned by from 10,000 to 11,000 seamen.

The Russian army consists, in general: 1, of the Active Troops; 2, of the Reserve Troops; 3, of the Irregular Troops. The total strength according to the reports of the War Ministry, was in 1859 as follows:

	Generals.	Officers.	Private.
Active Army	884	26,907	728,353
Reserve Troops	28	3,054	66,578
Irregular Army	80	4,635	92,000
	887	34,716	943,256

There were, besides, in the provinces, 508,335 veterans on indefinite furlough, of whom 239,245 had to join, in time of war, the active army;

* Equal to 7,612,874 English square miles.

also, 188,785 Cossacks on furlough, who, in case of war, would serve as reserves. Also, 144,814 men, mostly Bashkirs, who in times of peace are exempt from service on paying a war tax. Altogether, the Government, in time of war, could dispose of about 1,600,000.

The Russian navy, on the 18th June (1st June O. S.), 1862, was composed as follows:

<i>Steam Vessels.</i>	
Ships of the line.....	9
Screw frigates.....	12
Sidewheel frigates.....	8
Corvettes.....	29
Clippers.....	12
Floating Battery (iron-clad).....	1
Iron-clad frigate.....	1
Gunboats.....	
Yachts.....	
Schooners.....	
Transports.....	
Small sidewheel steamers.....	
Total steamers.....	

Having an aggregate horse-power of 87,007, and 2,887 guns.

<i>Sailing Vessels.</i>	
Ships of the line.....	9
Frigates.....	5
Corvettes.....	8
Brigs.....	2
Schooners.....	18
Gunboats.....	2
Tenders.....	
Transports.....	
Yachts.....	
Total.....	

Carrying 1,804 guns.

Total of steamers and sailing vessels, 810, carrying 3,691 guns. Besides the above, there were three floating batteries and about 800 coasting vessels. The personnel of the fleet on Jan. 1, 1862, was admirals and generals, 95; staff and subaltern officers, 3,245; civil functionaries, 966; soldiers and sailors, 55,216; marine guards and conductors, 169. During the year there was a reduction of 400 in the number of officers, and of 10,000 in the number of soldiers and sailors.

The Polish revolution, which had been the most prominent event in the history of Russia, in 1863, was rapidly drawing to a close after the beginning of the new year. The Vienna "Lloyd" gave the following review of the state of insurrection at the close of 1863:

Never were there so many bodies of insurgents in the Government of Lublin as now. Since the battle of Chelm, in the middle of November, the corps of Waligowski, Wierzbicki, Krysinaki, Cwiek, Marecki, Szydowski, Leniewski, Krysinaki, Ejtmannowicz, and many others, numbering 5,000 men in all, have been placed under the chief command of Gen. Kruk, who himself is at the head of a body of horse. These numerous little bands do much damage to the Russian garrisons, which, including those of Zamosc and Iwangrod, number upwards of 18,000 men. In the neighboring palatinate of Sandomir, in which Gen. Bossack is the chief commandant, the insurgent corps under Rembojle, Rudowski, and Eminowicz, number 8,000 men. The brilliant assault on the town of Opatow, and Kruk's victories at Ocozienko and Dzialossyc, prove that the insurgents are in this palatinate more than a match for the Russians, although the latter are upwards of 8,000 strong. In the other palatinates the military forces of the insurrection have to a great extent been absorbed by the civil organization. There are, however, still the little bands of Okuniewski, Nowicki, Pongowski, Korytkowski, Putt Kammer, Szumlanski, Syrewicz, Zychlinski, Gleba, and many others, which harass the Russians by constant skirmishes. In Samogitia the insurgents are again increasing in numbers. They are led by Kolyako, Wyslouch, and Kuszleyko. These little bands amounted in all to about 10,000 men.

The most successful among the Polish leaders during the first months of the year 1864, was Gen. Bossack, who, on February 22, captured the town of Opatow, and successfully harassed the Russians in the months of March and April, but then he also had to yield to the overwhelming forces of the enemy. Since May, little has been heard of guerrillas and engagements. The secret National Government continued issuing proclamations as late as July, but they failed to have any marked effect. At length the chiefs of the National Government were discovered, and on August 5th, M. Traugott, the head of the Government, together with Krajewski, Foeyski, Zulinski, and Tezioranski, the chiefs of the different departments, were hanged on the glacis of the citadel of Warsaw. The sentences of death passed upon eleven officials of the National Government were commuted in some cases to hard labor, and in others to imprisonment in a Siberian fortress.

Official statements of the Russian Government give the following statistics, relating to the insurrection in Poland: "During the sixteen months of the struggle (January 1863 to April 1864), 80,000 insurgents were killed or severely wounded; 361 were condemned to death by military tribunals, and 85,000 persons less compromised were transported to Siberia. The war contributions levied were six millions of roubles in the kingdom of Poland, three millions in Lithuania, two millions in Volhynia, Podolia, and Kiew. The National Government, on its side, raised the following sums:—Six millions in Poland, three millions in Lithuania, two millions in Volhynia, Podolia, and Kiew, two and a half millions in Galicia, and one million in Posnania. The number of Poles who found an asylum abroad is estimated at 10,000.

On March 6th, an imperial manifesto announcing the emancipation of the peasants throughout Poland, was promulgated. Another decree of the same date treats of the organization of the communal administrations on the principle of self-government in Poland, by which all connection between the nobility and peasantry is entirely severed.

On September 20th, an imperial rescript was issued, accompanied by five decrees, containing a series of liberal measures relative to public instruction in Poland, the creation of a university at Warsaw, and the establishment of numerous superior middle and primary schools, and a free school for women. The Poles preserve the use of their national language. For the other nationalities of the kingdom special schools are established, in which their respective idioms will be used. A sixth decree modifies the penal code by mitigating the penalties hitherto inflicted, and abolishes corporeal punishment.

Another great war which had engaged the Russian Government for about thirty years, that against the Circassians, was brought to a close

Opatow.

in 1864. Since the defeat and capture of Schamyl, the chief of the most warlike of the tribes, loosely included under the general name of Circassians, the progress of the Russians has been on the whole steady and irresistible. Once or twice the brave mountaineers dealt heavy blows, which unduly excited the hopes of their friends in Europe, some of whom were sanguine enough to believe that with a little foreign aid they would be able to make an attack on Southern Russia, that would operate as an important diversion in favor of the insurgent Poles. In November, 1863, the Shapsuhs, under the command of Hadji Thasigussa, who already possessed a distinguished reputation, which he well sustained on this occasion, drove back the Russians several times. But the invading army, which was under the chief command of the Grand-duke Michael, and estimated at over 200,000 men, was too numerous to leave any hope to the Circassians. The last engagement seems to have taken place in April, 1864. The Circassians then gave up the struggle, and, having received permission from the Turkish Government, determined to follow those of their countrymen who, during the preceding five years, had emigrated to Turkey. They severely suffered in this emigration, and thousands of them perished. The Turkish Government made great efforts to assist them, and gave them settlements near the mouths of the Danube.

The pacification of Poland and of the Caucasus was soon followed by the accomplishment of another of the objects of the settled Russian policy, of attaining the supremacy in Asia—the conquest of Toorkistan. The Bombay "Gazette" gives the following account of this campaign: "Before the Caucasus was entirely subjugated, the Russians had already made good their footing in Toorkistan, having taken possession of Khiva, and sent pioneers as far as Bokhara. But they have lately taken the offensive with a force evidently much larger than they ever before entered the field with in this part of Central Asia. The cause of their invasion of the principality of Kokan is not stated, but a strong power, covetous of the territory of a weak neighbor, can always find a convenient excuse for an appeal to arms. Without, however, presuming to determine whether the Russians had or had not real injuries to redress, we think Englishmen in general, both soldiers and politicians, may well take note of the surprising vigor with which the Kokan campaign has been brought to a successful close by the Russians. Fort after fort has been stormed in rapid succession; and the latest advices from Cabul are to the effect that Kokan itself has been taken, and that the Khan, after making submission to the conquerors, has been replaced on his throne as a vassal of the Emperor of Russia. Thus, Russia has already subjugated two of the States of Toorkistan, Khiva and Kokan; of the other two, Bokhara and the Afghan principality of Balkh, the former is

governed by a king who is the chosen ally and friend of the Russians, and who openly maintains the title to Balkh of Sirdar Abdoolrahman Khan, in defiance of the Ameer of Cabul, whose treacherous conduct to Afzul Khan, the father of Abdoolrahman, has made him most unpopular with all the Mussulmans of Central Asia. From the small beginnings, then, of twenty years ago, when the suspicions of Indian politicians of vivid imaginations were first aroused by rumors that here and there a Russian travelling merchant had penetrated within the borders of Toorkistan, Russia has steadily and surely advanced till she is now the most formidable military and political power in Central Asia, with a favorable opportunity presented to her of interfering in Afghan politics, and making her influence paramount in the only still independent State which separates her dominions from those of the Government of British India." The conquest of Toorkistan was followed by an imperial decree organizing the conquered territory into a Russian province.

The years 1863 and 1864 have not only been marked by great military successes, but by internal reforms even more important for the future destinies of the empire. The last vestiges of serfdom are fast disappearing. As a consequence of the emancipation of the peasants, the Government has taken measures for the diffusion of instruction among the agricultural population. An additional budget of 450,000 roubles for the year 1865 has been decreed, so that the budget of Public Instruction now amounts to about 1,800,000 roubles. This supplementary budget provides for the founding of village schools, of eleven new gymnasia (colleges); for the purchase of books, paper, etc., for the poorer peasants; for supplementary payment to schoolmasters and professors; for the purchase of scientific instruments; for the establishment of laboratories and museums; for the reorganization of the University of Warsaw; for the foundation of a polytechnic school, and for other schools for teaching agriculture and horticulture. The Latin system of higher education in the gymnasia has been reorganized, and the most strenuous efforts are being made to raise them to a level with the colleges of Prussia, which are generally recognized as the best of Europe.

But the most important of all the reforms is the introduction of a constitutional form of Government. The first step toward this reform was taken in the Grand Duchy of Finland. On September 18, 1863, the Emperor Alexander opened personally the Diet of the Grand Duchy with a speech, which expressed his confidence in a liberal form of Government, and intimated his design to develop liberal institutions first in Finland, and later in other parts of the empire. The emperor states that his attention had long been engaged with questions of a serious interest to Finland, but that they had to remain in suspense because "their solution demanded the coöperation of the Diet." It was impossi-

ble for him to convoke the four estates (nobility, clergy, burghers, peasants) during the first years of his reign, but he had, nevertheless, prepared in the mean time drafts of several laws and other administrative matters, to be laid before the Diet. He declares it to be his desire that hereafter no loan shall be contracted without the participation of the estates of the Grand Duchy, unless a sudden invasion of the country or some other unforeseen public calamity should make it necessary. He further announces that the levying of new taxes will be proposed to the Diet to promote the material prosperity of the nation, and to extend the blessings of public education, and he declares it to be the task of the Diet to decide upon the urgency and extent of these measures." He concludes with recommending to the representatives of the Grand Duchy "to prove, by the dignity, the moderation, and the calmness of their deliberations, that in the hands of a people determined to act in concert with their sovereign for the development of their prosperity, the liberal institutions, far from being a danger, become a guarantee of order and prosperity." At the opening of the Diet there were present 141 deputies of the nobility, 82 deputies of the clergy, 80 representatives of the burghers, and 48 deputies of the peasants.

On January 21, 1864, the *official journal* of St. Petersburg published an imperial ukase for the organization of the provincial and district representations of Russia, with the exception of the western and Baltic provinces—Archangel, Astracan, and Bessarabia. Toward the close of the year the first elections for the new Provincial Diets were held all through Russia, and the opening of the first of the diets was announced to take place in March, 1865.

On December 6, an imperial ukase was issued ordering the Senate to promulgate the law relative to the new organization of the courts of justice, the new penal code, and the laws upon the procedure in civil and criminal affairs, and the powers of justices of the peace, all these laws having received the emperor's sanction.

Several governments (provinces) of Russia suffered frightfully from incendiary fires, which occurred from April to August. The work of the incendiaries commenced at the end of April in the government of Kalouga by the destruction of 54 houses; next at Okhanak 204 houses were burnt. The fires continued in succession at Scrapoul; at Serdobak, where four-fifths of the town were destroyed; at Mozir, one-half of the houses; at Mologa, more than 200; and at the fair of Nijni-Novgorod 1,500 booths and 148 houses. At Patrofsk there were as many as six fires in the month of June alone, and entire districts of the town were consumed. The powder magazines of Kazan and that of Okhta, near St. Petersburg, were blown up; at Riga two fires occurred one after the other; the same at Tunien, where the finest quarters of the town were entirely destroyed. At Orenburg 600 houses were burnt, and Baki is now only a heap of ruins. During the same space of time four conflagrations took place at St. Petersburg. A great incendiary fire also occurred at Simbirsk. The place was burning for three days, and on the 21st of August the whole was in ruins; the cathedral, the churches, the House of Assembly of the nobles, with its magnificent library, the house of the governor, all the courts of justice, with their archives, etc.; in fact, a great town, inhabited by thirty thousand people, was entirely destroyed.

S

SAN DOMINGO, or the Dominican Republic, a State of the West Indies, occupying the eastern portion of the Island of Hayti. The Dominican Republic claims as her possession the extent of territory defined by the treaty of limits between Spain and France in 1777. According to these limits it comprises about 22,000 square miles, and is divided into the following five provinces:

	Population.
San Domingo.....	25,000
Asnadelomfofela.....	15,000
Segbo.....	20,000
Santiago de los Caballeros.....	22,500
Concepcion de la Vega.....	22,000
	104,500

According to other accounts the population exceeds 200,000.

The Dominicans declared themselves independent of Hayti in 1844. In 1850 their independence was acknowledged by the European Powers generally, and in 1855 by Spain. In

1861 the once popular but unprincipled President, Santana, privily sold the Republic to the Spanish Government for his own benefit. The inhabitants never gave their consent to this sale. They have made an unrelenting resistance* to the army of the invader. Too weak to make any other than a guerrilla warfare, they yet succeeded in compelling the Spaniards to confine themselves to the possession of a few seaport towns. They were powerfully aided by the malarious climate and the mountainous character of the country. The Spanish troops, swept off by fever, shot down in the woods, starved in the town, perished almost as fast as they arrived.

When the Provisional President, General Salcedo, showed himself inclined to negotiate with the Spaniards about submission, his action was promptly repudiated by the principal offi-

* See ANNUAL CYCLOPEDIA for 1862, page 825.

cials at San Domingo, who deposed him from office, and appointed in his place Gen. Gaspar Polanco. The soldiers of the Dominican army joined in this movement. After his election the new President issued the following proclamation to the troops and manifesto to the people:

GOD, COUNTRY, AND LIBERTY!

Gaspar Polanco, General of Division, President of the Provisional Government.

MANIFESTO.

The whole nation well knows the causes that have led to the deposition of General Salcedo, for in no other way his presence in the Government could have spread so general a discontent. But I cannot refrain from mentioning them, both for my own satisfaction and for the purpose of saving the Dominicans from any unjust stigma they may be branded with by their enemies.

For some time the glorious Restoration initiated on the 16th of August, for the purpose of expelling Spanish despotism from our soil, had lost the vigor of the first days. To the incredible victories, to the portentous deeds of arms, had succeeded discouragement and inaction, while such a state of decay animating the hopes of our enemies, was inducing them to conceive the possibility of conquering us. And it could not be otherwise, for the first magistrate of the nation, always distant from the seat of Government, was unadvisedly destroying its best measures and annulling them without regard.

Such conduct, occasioning embarrassment, difficult to be surmounted, constantly obstructed the march of the revolution, and while there existed an executive in the field and another in the capital, there was in reality no Government at all. General Salcedo thought, also, that he would deserve the title of magnanimous in tolerating the excesses of the Spaniards, whilst this culpable tolerance, when energy was a duty, caused the weakening of public spirit; thus involuntarily constituting himself a candidate of a reaction which, although it could not be successful, might place the country in great danger.

His thirst for popularity frequently moved General Salcedo to make abundant issues of paper money, always opposing the will of his colleagues in the Government for the purpose of buying at a high price the good-will of a few, thus increasing the discredit of our currency, and totally destroying the basis of our financial system.

Always persisting in the idea of annulling the acts of his colleagues, he destroyed the Government created on the 14th of September, 1863, by popular elections, because, in the exercise of its faculties, it had confirmed the sentence of death which the court-martial had pronounced against a convicted and confessed traitor—thus constituting himself as supreme dictator of the nation, without consulting its will.

He arbitrarily created a cabinet, and assuming the rights of a people who fight for their liberty, curtailed this and misled the national opinion; but his dictatorship, careless of the administration of public affairs and totally absorbed in his personality, was leaving to crumble, little by little, the grand work of the 16th of August, while he was indulging in frivolous amusements and pleasures, which stained the dignity of the people whose representatives he had ignored.

The present representatives of the Spanish Government, who, in view of so many blunders, came to conceive the possibility of a diplomatic and military surprise, initiated negotiations of peace, and General Salcedo, anxious for it, sent a commission to Monte Christi composed of Generals A. Deatjeau, Julian B. Curiel, Pablo Rujol, Pedro A. Pimentel, and Colonel M. R. Objio. A few conferences were held with Lieutenant-General Don Jose de la Gandara, whose bad faith, detected by the commissioners, caused

them to stop short all negotiation and return to the Dominican camp, giving the cry of alarm.

General Salcedo, lulled by the hopes of peace, had completely neglected the cantons near Monte Christi; and although the attitude of the people and the echo of that alarm induced him to publish a warlike allocation, he conceived, nevertheless, the idea of sending another committee, which, while it showed his weakness toward the enemy, would humiliate the national dignity. In the midst of these delays and negligence, he was surprised by this popular movement, which occasioned his downfall, and the patriots, reassured by this act, are again animated by that revolutionary vigor which the circumstances demand. I have cheerfully endeavored to direct them, convinced of the necessity of such a reform; by it the Dominican nationality has been insured; it has given new guarantees of triumph to our cause; it has saved our liberty. Should Spain insist in her purpose of subjugating the people I represent, and war becomes inevitable, greater will be our glories. If she desires peace, the road to it is clear.

President Polanco appointed a new cabinet and issued stringent regulations, refusing to receive into his lines deserters. By a decree, dated the 19th of October, all the titles and forms belonging to monarchical Governments were abolished, as inconsistent with the republican system. The formula, "God preserve you many years" (*Dios guarde a V. muchos años*), was ordered to be changed to that of "God and Liberty." To raise money for continuing the war against invasion, the Dominican Government issued bonds and paper which were taken by the people.

On Dec. 4 General Cabral obtained a great victory over the Spaniards at La Canela, near Neyba. After a three hours' struggle the latter were completely defeated. The enemy left three banners, all their baggage, ninety-seven carbines, three trumpets, all their munitions, their mules, &c., &c., besides one hundred and seven dead and thirty-five prisoners. Afterwards the towns of Guerra, Los Llanos, and Hato-Mayor, the communes of Macoris and Sabana de la Mar gave their adherence to the national cause in a free and spontaneous *pronunciamento*, according to a communication from Gen. Mansueta. The Spaniards abandoned the town of Seybo, which was at once occupied by Gen. Mansueta, and returned to Higüey, where they were besieged by the patriots. President Polanco, who was about to start for the northwest, addressed a proclamation to the people of Cibao, exhorting them to follow him in this new campaign. General Castillo also published a proclamation enjoining the inhabitants of Bani to rally for the national cause, telling them that it was hard for him to fight against brothers whose place was by his side under the same flag.

Toward the close of the year President Jeffrard, of Hayti, sent two commissioners, Col. E. Romain and Commissary Douret, to San Domingo for the purpose of transmitting to the provisional Government a few friendly counsels, which, if accepted by the Dominicans, would bring peace and independence to the republic. General Geffrard offered himself as

mediator between the contending parties, and submitted to the approbation of the Dominicans certain propositions which, if accepted by them, he would present to the Spanish chief. These propositions were modified several times, and at last the Dominican Government decided upon two single articles, which, if Geffrard had no objection, could at once be presented to the Spanish commander. 1st. A general exchange of prisoners of war and State, including those incarcerated before the revolution by the Spaniards, on account of their politics, without regard to the numbers on either side. 2d. A commission, of two or more individuals, appointed by the two contending parties, would be sent to Madrid to present to the Queen a representation asking the peace, liberty, and independence of the republic.

In the meanwhile there had been a change of Cabinet in Spain, and the new Ministry of Narvaez, seeing the impossibility of continuing any longer the war against San Domingo, proposed to the Cortes a bill repealing the act of 1861, by which that country was annexed to Spain. After a protracted and animated debate the bill was passed and the independence of San Domingo restored. (*See SPAIN.*)

SANITARY COMMISSIONS. I. **THE UNITED STATES SANITARY COMMISSION.** The proclamation of the President of the United States on the 15th of April, 1861, announcing the beginning of a civil war, and calling for 75,000 volunteer soldiers, not only brought to light the patriotic feeling of the masses of American citizens, who hastened to enrol themselves among the volunteer defenders of the country, but evoked a deep feeling of sympathy, and a desire to aid in the good work on the part of those who from age, profession, or sex, were debarred the privilege of giving their personal service in the field. Soldiers' aid societies, to furnish lint, bandages, hospital clothing, and delicacies, as well as nurses for the sick and wounded, sprung up on every hand; their zeal was often mingled with inexperience and ignorance, and the Medical Bureau of the War Department, nearly as ignorant as they of the immense duties and responsibilities which would soon overwhelm it, turned a cold shoulder to their offers of aid; but the motives which prompted them in their benevolent offers were worthy of all praise. Among these aid societies, many of them organized within two or three weeks after the President's proclamation, was one, "The Woman's Central Association of Relief," in New York, which had among its officers some gentlemen of large experience in sanitary science, and of considerable knowledge of military hygiene. These sought to give to its labors a practical character from the beginning, and they urged upon the association the importance of ascertaining at once what the Government would and could do, and then making arrangements to coöperate with it and supplement its deficiencies. Prominent among these gentlemen was Rev. Henry W. Bellows,

D.D., who had previously won a high reputation by his efforts for improving the sanitary condition of our large cities.

Other organizations of gentlemen were attempting by different, yet in the main similar measures, to render assistance to the Government. Among these were the "Advisory Committee of the Board of Physicians and Surgeons of the Hospitals of New York," and "The New York Medical Association for furnishing Hospital Supplies in aid of the Army," both new associations, called into existence by the exigencies of the war. Fraternizing with each other, as they well might, since they all looked to the accomplishment of the same end, these associations resolved to send a joint delegation to Washington to confer with the Government, and ascertain by what means they might best coöperate with it for the benefit of the soldiers of the nation.

The idea of organizing a Commission which should unite and energize all these as yet isolated societies, and apply their contributions to the best advantage in aid of the Medical Bureau and the sick and wounded soldiers, seems to have been suggested to the delegation at the very outset of their mission.

On the 18th of May, 1861, Messrs. Henry W. Bellows, D.D., W. H. Van Buren, M.D., Elisha Harris, M.D., and Jacob Harsen, M.D., representatives of these three associations, drew up and forwarded to the Secretary of War a communication setting forth the propriety of creating an organization which should unite the duties and labors of the three associations, and coöperate with the Medical Bureau of the War Department to such an extent that each might aid the other in securing the welfare of the army. For this purpose they asked that a mixed Commission of civilians, military officers, and medical men, might be appointed by the Government, charged with the duty of methodizing and reducing to practical service the already active but undirected benevolence of the people toward the army, who should consider the general subject of the prevention of sickness and suffering among the troops, and suggest the wisest method which the people at large could use to manifest their good-will toward the comfort, security, and health of the army. They referred to the Commissions which followed the Crimean and Indian wars, and brought to light the vast amount of suffering which had been needlessly endured there, and begged that, in this case, the organization might precede the war, and prevent so far as possible the suffering which would otherwise ensue. They suggested, also, the appointment of cooks and nurses for the army, and stated that the "Woman's Central Association of Relief" stood ready to undertake the training of both in their duties.

On the 22d of May, R. C. Wood, M.D., then Acting Surgeon-General, now in charge of the Western Medical Department, followed this communication by a letter addressed to the

Secretary of War, urging the establishment of the desired Commission as a needed adjunct to the new, extensive, and overflowing duties of the Medical Bureau.

On the 23d of May the delegation addressed to the Secretary of War a "Draft of powers, asked from the Government, by the Sanitary delegates to the President and Secretary of War." In this paper the powers desired were stated as follows:

"1. The Commission being organized for the purposes only of inquiry and advice, asks for no legal powers, but only the official recognition and moral countenance of the Government, which will be secured by its public appointment. It asks for a recommendatory order, addressed in its favor to all officers of the movement, to further its inquiries; for permission to correspond and confer, on a confidential footing, with the Medical Bureau and the War Department, proffering such suggestions and counsel as its investigations and studies may from time to time prompt and enable it to offer.

"2. The Commission seeks no pecuniary remuneration from the Government. Its motives being humane and patriotic, its labors will be its own reward. The assignment to them of a room in one of the public buildings, with stationery and other necessary conveniences, would meet their expectations in this direction.

"3. The Commission asks leave to sit through the war, either in Washington, or when and where it may find it most convenient and useful; but it will disband should experience render its operations embarrassing to the Government, or less necessary and useful than it is now supposed they will prove."

Concerning the objects of the Commission, the delegation say:

"The general object of the Commission is through suggestions reported from time to time to the Medical Bureau and the War Department, to bring to bear upon the health, comfort, and morale of our troops, the fullest and ripest teachings of sanitary science, in its application to military life, whether deduced from theory or practical observations, from general hygienic principles, or from the experience of the Crimean, the East India, and the Italian wars. Its objects are purely advisory."

They indicate the following specific objects of inquiry:

"1. *Matériel of the Volunteers.* The Commission proposes a practical inquiry into the *matériel* of the volunteer forces, with reference to the laws and usages of the several States, in the matter of inspections, with the hope of assimilating the regulations with those of the army proper, alike in the appointment of medical and other officers, and in the vigorous application of just rules and principles to recruiting and inspection laws. This inquiry would exhaust every topic appertaining to the original

matériel of the army, considered as a subject of sanitary and medical care.

"2. *Prevention.* The Commission would inquire with scientific thoroughness into the subject of diet, cooking, cooks, clothing, huts, camping grounds, transports, transitory depots, with their expenses, camp police, with reference to settling the question how far the regulations of the army proper are or can be practically carried out among the volunteer regiments, and what changes or modifications are desirable from their peculiar character and circumstances? Every thing appertaining to outfit, cleanliness, precautions against damp, cold, heat, malaria, infection, and unvaried or ill-cooked food, and an irregular or careless commissariat, would fall under this head.

"3. *Relief.* The Commission would inquire into the organization of Military Hospitals, general and regimental; the precise regulations and routine through which the services of the patriotic women of the country may be made available as nurses; the nature and sufficiency of hospital supplies; the method of obtaining and regulating all other extra and unbought supplies, contributing to the comfort of the sick; the question of ambulances and field services, and of extra medical aid; and whatever else relates to the care, relief, or cure of the sick and wounded, their investigations being guided by the highest and latest medical and military experience, and carefully adapted to the nature and wants of our immediate army, and its peculiar origin and circumstances."

The President and Secretary of War were not at first disposed to look with any great favor upon this plan, which they regarded rather as a sentimental scheme concocted by women, clergymen, and humane physicians, than as one whose practical workings would prove of incalculable benefit to the army which was rapidly coming into existence. The earnestness of its advocates, their high position, and the evidence which was adduced that they only represented the voice of the nation, produced some effect in modifying their views; and when the Acting Surgeon-General asked for it, as a needed adjuvant to the Medical Bureau, likely soon to be overwhelmed by its new duties, they finally decided, though reluctantly, to permit its organization.

Accordingly the Secretary of War, on the 9th of June, decided on the creation of such a Commission, the President approving. The title first given to the new organization was "The Commission of Inquiry and Advice in respect of the Sanitary Interests of the United States Forces," but was subsequently changed to "The United States Sanitary Commission."

It was composed of the following gentlemen: Rev. Henry W. Bellows, D.D., President, New York; Professor A. D. Bache, Vice-President, Washington; Elisha Harris, M.D., Corresponding Secretary, New York; George W. Cullum, U. S. A., Washington; Alexander E. Shiras, U. S. A., Washington; Robert C.

Wood, M.D., U. S. A., Washington; William H. Van Buren, M.D., New York; Wolcott Gibbs, M.D., New York; Cornelius R. Agnew, M.D., New York; George T. Strong, New York; Frederick Law Olmsted, New York; Samuel G. Howe, M.D., Boston; J. S. Newberry, M.D., Cleveland, Ohio. To these were subsequently added Horace Binney, Jr., Philadelphia; Rt. Rev. Thomas M. Clark, D.D., Providence, R. I.; Hon. Joseph Holt, Kentucky; R. W. Burnett, Cincinnati, Ohio; Hon. Mark Skinner, Chicago, Illinois; Rev. John H. Heywood, Louisville, Kentucky; Professor Fairman Rogers, Philadelphia; J. Huntington Wolcott, Boston; Charles J. Stillé, Philadelphia; Ezra B. McCagg, Chicago, Ill.; and nearly six hundred associate members, in all parts of the country. (*See ANNUAL CYCLOPEDIA*, 1861, p. 36.)

It is a matter of wonder that in a field so wholly new the delegation should have so fully comprehended the duties which would be incumbent upon the Commission, and the range of its future operations. There were indeed certain features of its work which, of necessity, could only be developed by the bitter experiences through which it was called to pass; and in the end, the great lack in the Government Medical Service, compelled it to assume more of the executive and less of the advisory functions. Still it has never failed to bear in mind that it was created to aid by its advice, counsel, and, where needed, its direct help, the medical department of the Government service, and has ever been ready to withdraw from every duty which that department, under its constantly increasing efficiency, could successfully perform.

Under its charter, it at once proceeded to organize its action and to appoint committees from its members to visit every camp, recruiting-post, transport, fort, hospital, and military station, to ascertain and report all abuses, and to perfect such organization as might insure a higher degree of health and comfort for the soldiers.

The medical members of the Commission undertook to consider the questions which might arise concerning the diseases of the camp, and their medical and surgical treatment, from the highest scientific point of view; and guided by the rich and abundant experience of European army surgeons, to prepare brief medical and surgical tracts adapted to the wants of the volunteer surgeons of the army. Among these tracts, of which many thousands have been circulated, were "Advice as to Camping;" "Report on Military Hygiene and Therapeutics;" "Dr. Guthrie's Directions to Army Surgeons on the Battle-field;" "Rules for preserving the Health of the Soldier;" "Quinine as a Prophylactic against Malarious Diseases;" "Report on the value of Vaccination in Armies;" "Report on Amputation;" "Report on Amputation through the Foot and at the Ankle-joint;" "Report on Venereal Diseases;" "Report on Pneu-

monia;" "Report on Continued Fevers;" "Report on Excision of Joints for Traumatic Cause;" "Report on Dysentery;" "Report on Scurvy;" "Report on the Treatment of Fractures in Military Surgery;" "Report on the Nature and Treatment of Miasmatic Fevers;" "Report on the Treatment of Yellow Fever;" "Report on the Treatment of Infectious Diseases," etc.

Three committees were appointed, one to communicate the matured counsels of the Commission to the Government, and procure their ordering by the proper departments; a second to maintain a direct relation with the army officers and medical men, with the camps and hospitals, and by all proper methods to make sure of the carrying out of the sanitary orders of the Medical Bureau and the War Department; and a third to be in constant communication with the State Governments, and the public benevolent associations interested in the army.

This plan of organization was approved by the Secretary of War, on the 18th June, 1861, and on the 21st of that month the Commission issued its first address to the public. This was soon followed by an appeal to the Life Insurance Companies, and another to men of wealth throughout the country for aid in the prosecution of its work. The members of the Commission, as such, received no compensation, but the purposes of the organization would require a very considerable number of paid employes, and would involve heavy expenses for publications and supplies, which could only be purchased with money. A considerable number of associate members were elected at this time, who gave their services in raising means for the operations of the Commission, and Ladies' Associations, in all parts of the country, prepared clothing and supplies of all sorts, and forwarded them to its depots.

The members of the Commission visited, during the summer of 1861, the different camps of the widely-extended armies of the republic, and carefully inspected and reported upon their sanitary condition and needs.

The necessity of the services of the agents of the Commission on the field immediately after, or, when practicable, during the progress of, important battles, was felt, as soon as such battles occurred. At first, owing to the difficulties of procuring transportation for its supplies to the field, in consequence of the dependence of the Medical Bureau upon the Quartermaster's Bureau for transportation, it could not reach the field so early as its officers desired, and in some of the earlier battles there was great suffering (partially ameliorated, it is true, by individual effort and enterprise) in consequence. But the Commission soon found it necessary to have its own independent transportation, and this both by land and water; its hospital transports, its wagons and ambulances, and its ambulance railroad cars. In July, 1863, it added to these the plan of attaching to each army corps a Superintendent of Relief, with his assistants, wagons, ambulances, and supplies, to

remain constantly with his corps and minister to its needs.

It has, throughout, worked in harmony with the United States Government, and especially with the Medical Bureau, to which it has proved of great service. That bureau, which at the commencement of the war was utterly inadequate, though from no fault of its own, to the vast work before it, is now well regulated and admirably organized, having a corps of three thousand skilful and responsible surgeons, and fifteen thousand hired nurses experienced in their duties.

But even with this large force, trained as it has been by the arduous duties to which it has been called, there are, and must be, numerous instances where the most perfect working of the Government machinery cannot remedy suffering and misery which a more flexible system can relieve. The presence of incipient scurvy among the troops on Morris Island, and the forces engaged in the siege of Vicksburg and Port Hudson, was detected and remedied by the sending at once of large amounts of fresh vegetables and anti-scorbutics by the Commission to those points, which reached them promptly, and arrested the disease, while, by the necessarily slow movements of the Government, many weeks must have elapsed ere the needed remedies could have been furnished, and meantime half the forces engaged would have perished. "Potatoes and onions," says one of the energetic lady agents of the Commission in Chicago, "captured Vicksburg." "The supplies of fresh vegetables and anti-scorbutics sent by the Sanitary Commission to Morris Island, saved the army of the South," is the testimony of an impartial but thoroughly competent witness, who spent ten months in the hospitals of that department in 1863.

The work of the Sanitary Commission now comprehends the following distinct departments of labor: 1st. *The preventive service or Sanitary Inspection*, which requires a corps of Medical Inspectors, whose time is passed with each army corps in the field, visiting camps, hospitals, and transports; skilful and experienced physicians, who watch the perils from climate, malarious exposure, from hard marching or active campaigning, from inadequate food or clothing, growing out of imperfect facilities of transportation, and report to the Chief Inspector of that army, and through him to the Chief of Inspection at headquarters, for remedy, or to the Associate Secretary in charge, or to relief agents under their control, and thus see to the supplying of the needs of that portion of the army, and the adoption of the necessary measures for the improvement of its sanitary condition. From the reports of these inspectors the materials are gathered which are digested into such forms as to be of permanent value in the Commission's Bureau of Statistics. To this department belongs also the corps of Special Hospital Inspectors, selected from the most learned and skilful physicians of the country, who,

from time to time, make the circuit of all the general hospitals of the army (now numbering nearly three hundred), and report upon their wants, condition, progress, *personnel*, and capacity for improvement. The substance of these reports is confidentially made over to the Surgeon-General. A third agency, in connection with this preventive service, is the preparation and circulation of the medical tracts already named, and information important and indispensable to the officers, soldiers, and especially the medical men in the field.

2. *The Department of General Relief*.—The supplies of food, clothing, bandages, hospital furniture, clothing, and bedding, delicacies for the sick, stimulants and cordials for the wounded on the field, the sick and wounded in camp, field, regimental, post, and general hospitals, come from the branches of the Commission, of which there are twelve, having depots in Boston, New Haven, New York, Philadelphia, Cincinnati, Cleveland, Chicago, Buffalo, Pittsburg, Detroit, Columbus, and Louisville. Each of these branches, which are variously denominated as Ladies' Aid Societies, Relief Associations, etc., has its distinctly defined field, from which it draws its supplies, and has from one hundred and fifty to twelve hundred auxiliary aid societies, in the towns, hamlets, and villages, and, in the cities, in the different churches, of its field. The stores collected by the branch are received at its depot, opened, assorted, each kind by itself, repacked, and reports of the number and amount of the supplies thus accumulated are sent every week to the principal office of the Commission, or to the Associate Secretary of the Eastern or Western Department, as the case may be, and shipped, according to orders received, to the depots of distribution, Washington, D. C., Camp Distribution, Va., Baltimore, Md., Harper's Ferry, Va., Annapolis, Md., Camp Parole, Md., Norfolk, Va., City Point, Va., Newbern, N. C., Beaufort, S. C., New Orleans, La., or to the army where they are needed, with the utmost promptness. One of these branches (the "Woman's Central Association of Relief") reported, among the stores forwarded from its depot, from May 1, 1861, to November 1, 1864, 599,780 pieces of clothing, 89,898 pieces of bedding, and over 90,000 packages of fruit, vegetables, jellies, wine, condensed milk, beef-stock, groceries, pickles, lemonade, etc., of a total value of over a million of dollars. The "Northwestern Sanitary Commission," the branch of the U. S. Sanitary Commission at Chicago, had sent to the depots of distribution from its organization to December 31, 1864, supplies to the value of \$280,645.02, and had expended besides for the purposes of the Commission, about \$57,000 more. The supplies thus furnished are distributed with great care to avoid waste, and to supplement the food, clothing, and medicines which the Government is bound to furnish—the object being to do what the Government cannot, and to avoid duplicating its supplies of

what it can and should furnish. Care is exercised also to avoid imposition, while no sufferer in need is allowed to suffer when the Commission can supply his wants. The Commission is national in its character, and supplies the soldiers of one State as readily as those of another. Nay, more—the rebel wounded, when left on the field, or in temporary hospitals within the Union lines, or when sent to camps and hospitals as prisoners, have uniformly received its bounty and its assiduous care. It has had in this matter, at times, to contend, both among the people and on the field, with that exclusive feeling which would limit its beneficence to the soldiers of a single State or regiment; but oftenest the agents of these local organizations have, from the feeling which such exclusiveness has caused among the soldiers, turned their stores into the depots of the Commission, and themselves aided in their distribution to the soldiers, without distinction of locality. The Field Relief Superintendents, already mentioned, who accompany each army corps, belong to this department of general relief.

8. *The Department of Special Relief.*—This department is under the general superintendence of Rev. F. N. Knapp, Associate Secretary of the Commission for the East, at Washington, and of Dr. J. S. Newberry, Associate Secretary for the West, at Louisville. It furnishes "Homes" to soldiers, where shelter, food, and medical care and general superintendence are furnished for those soldiers who are not yet under the care of the Government, or have just got out of their care, or have somehow lost their status and cannot immediately regain it—recruits, or men on leave, sick leave or furlough, going to and fro; men without skill to care for themselves, ignorant, underwitted, or vicious; men discharged prematurely from the hospitals; men found in the streets, or left behind by their regiments. Of these classes about seven thousand five hundred are accommodated daily or nightly in the homes of the Commission at Alexandria, Harrisburg, Baltimore, Washington, Buffalo, Cincinnati, Cairo, Paducah, Camp Nelson, Louisville, New Albany, Nashville, Columbus, Cleveland, Detroit, Memphis, and New Orleans.

There are also belonging to this department six lodges—homes on a smaller scale—where the wearied soldier, sick or feeble, may await his opportunity of obtaining his pay from the Paymaster-General; or landing sick from a steamer or cars, and unable to reach the hospital to which he may belong, can find rest, food, and medical care, till he can be transferred to the hospital, or is able to rejoin his regiment. There are also at Annapolis, Md., and at Washington, D. C., "Homes for the Wives, Mothers, and Children of Soldiers," fitted up and supplied by the Commission, where these friends of the sick and wounded soldier, coming with scanty means to minister to his necessities, can find comfortable food and shelter. Besides these, "feeding stations" for the supply of the

sick, wounded, and famished soldier, passing to and from the field, have been established, usually temporarily, but sometimes permanently, on the route from Louisville to Nashville, Chattanooga, Atlanta, &c., and in the Shenandoah Valley, at City Point, and elsewhere. The hospital cars, of which there are several, between Washington, New York, and Boston, and between Louisville and Chattanooga, Tennessee, fitted up with hammocks, in rubber slings, and with a small kitchen for preparing the necessary food for the sick and wounded, and under the charge of a skilful surgeon, belong to this department; as do also the Sanitary steamers, the *Clara Bell*, on the Mississippi, the *New Dunleith*, on the Cumberland, and the *Elizabeth*, on the Potomac. These are used both for the transmission of necessary supplies, and the transportation of the wounded. In this department, also, the commission have established agencies at Washington, Philadelphia, New York, Louisville, and New Orleans, for obtaining for the soldiers and their families, pensions, bounties, back pay, transportation, aid in correcting the soldiers' papers, where there are errors in form, or recovering them their positions when they have wrongfully been set down as deserters, and saving them from sharpers. The Commission have also established Hospital Directories at Washington, Philadelphia, New York, and Louisville. In these four directories are registered the names of all soldiers in the United States general hospitals, and as far as possible the regimental and post hospitals throughout the country, and these are constantly receiving additions from the reports sent regularly from such hospitals. By applying to these Directories, information is furnished to friends without cost, other than that of postage or telegram, of the location and condition of any soldier who is or has been within a year an inmate of any United States military hospital. At the Washington office of the Commission, the names of patients in the hospitals in Eastern Virginia, Maryland, District of Columbia, North Carolina, South Carolina, Florida, and Louisiana, are recorded; at Philadelphia, those in Pennsylvania hospitals; at New York, those in New York, New Jersey, and New England; at Louisville, those in Western Virginia, Ohio, Indiana, Illinois, Missouri, Iowa, Kentucky, Tennessee, Mississippi, and Arkansas. The officers in charge require the name, rank, company, and regiment of the person inquired for, and where he was when last heard from. About 800,000 names have been thus recorded, and the information afforded by these directories to the friends of the sick and wounded has been of incalculable value, often leading to the preservation of life, and to the relief of that most terrible mental anguish, the torture of a dread uncertainty.

Still another measure of special relief, on which the Commission has expended more than \$30,000, is the sending of supplies, so long as it was permitted, to our soldiers who were pris-

oners at Richmond, Salisbury, and Andersonville, and there undergoing the terrors of cold, nakedness, and starvation. It also sent on every flag-of-truce boat from Fortress Monroe ample stores of clothing, cordials, nourishing food, medicine, and restoratives, for the poor fellows who were exchanged, and who, but for this timely relief, would have many of them died on the voyage. It has organized a system of furnishing fresh supplies to the hospitals around Washington at prime cost, which it brings from Philadelphia in arctic cars, thus preventing frauds, and the commissions formerly obtained by the hospital stewards, and furnishing more and better supplies to the inmates of the hospitals for less money. It has caused reforms to be instituted in our own convalescent and parole camps, and in the prison camps of the rebels, which our Government hold as prisoners, promoting the health and comfort of both in every possible way. Its agents and superintendents have often brought off men under fire from the battle-field, and four of them were taken prisoners by the rebels, after Gettysburg, and notwithstanding the kindnesses bestowed by the Commission on rebels, wounded and prisoners, were subjected to the meagre fare and intolerable filth of Libby prison and Castle Thunder, for months, when two of them were finally released on parole.

4. *The Department of Field Relief.*—The Commission has maintained a chief inspector for the armies of the East, and another for the military division of the Mississippi, whose duty is to superintend the work of field relief. He has under his command a superintendent and assistant-superintendent of such army, two field storekeepers and two messengers, and one or more relief agents to each army corps. These relief agents are furnished with one or more wagons of supplies and ambulances, and move with their corps in the field, ministering to the wounded on the field, furnishing bandages, cordials, and nourishment, and aiding the surgeons and assistant-surgeons in the field hospitals. They also render assistance and supply deficiencies in the care of the sick in camp. The expenditure of the Commission for the Field Relief Department has been about \$190,000.

5. Still another department of the Sanitary Commission's work has been its *Auxiliary Relief Corps*. This was first organized in May, 1864. Its object was to supply the deficiency of systematic personal attendance and work in the hospitals, or among the wounded on the field. It employed in the Eastern armies (in Virginia and the Department of the South) forty men regularly, and the number was increased during the severe battles of May and June, by volunteers, to one hundred and fifty. In all, four hundred different agents were employed, and more than seventy-five thousand patients served with suitable food, delicacies, cordials, clothing, &c., &c., previous to Jan. 1, 1865. Personal ministrations to the sick and wounded, in the way of conversation, writing

letters, supplying them with stationery, postage stamps, newspapers, magazines, and books, also formed a part of the duties of this corps.

In these labors it has constantly had the aid and cooperation of the Medical Department, and, where it could be bestowed, that of the Quartermaster's Department; and the generals and commanding officers in the field have, almost without exception, given it their hearty sanction and assistance. Without these, its work would have been fourfold more expensive than it has; but even with this assistance, it has necessarily had to incur large expenditures, and has distributed supplies to an immense value. At the commencement of its work, when it was expected that the war would be a brief one, it made its appeals to the public for fifty thousand dollars, a sum which it was thought would suffice to accomplish its purposes; but with the increasing proportions of the war, increasing means were found necessary. While, of most descriptions of supplies, their stock derived from the branches was ample, there were some, such as the best qualities of wines and brandies, quinine, &c., which could only be obtained by cash purchases. The transportation of their supplies, though much of it was given by railroad companies, was still very expensive, while the maintenance of their homes, lodges, offices, and directories, required a heavy outlay. The Commission, as such, received no compensation, and of its officers, the President, Vice-President, and Treasurer, received no pay; while the Associate Secretary for the West, the only other member of the Commission now in service (except the Executive Committee), having left his residence and practice at Cleveland for Louisville in the Commission's service, has a moderate salary. The Commission has regarded it necessary for the proper performance of its extensive, varied, and onerous duties, to employ paid agents, and has in its employ about two hundred. To none of them are salaries paid so large as they could receive in other business, but they remain in the work because they love it. The aggregate salaries, previous to May, 1864, was about \$15,000 per month, and of other expenses from \$30,000 to \$35,000 per month, making a total sum of \$45,000 to \$50,000 per month; but with the progress of the gigantic campaigns, and the terrible battles, both East and West, in the months of May, June, July, and August, 1864, this expenditure was greatly increased. For the months of May and June alone the outlay was \$525,000, and for the season more than \$1,000,000. The expenditure of supplies varies with the occurrence of great battles. During, and immediately after, the battles at Gettysburg, supplies to the value of \$75,000 were distributed there. To the army of the Cumberland, within ten days after the disastrous battle of Chickamunga, six thousand packages were sent; and immediately after Chattanooga, five thousand packages and boxes went forward.

The receipts of the Commission, from its or-

ganization in June, 1861, to Oct. 1, 1864, were in money \$3,088,124.58; of this amount about \$1,000,000 has been received from the States and territories on the Pacific slope, including about \$700,000 from California alone. Aside from this, its branches have received in money to December, 1864, about \$2,000,000, which has been expended in the purchase of supplies, in local relief, and in the support of establishments of special relief under their direct charge. Its expenditures for the same period were \$2,467,958.55, and in the months of October and Nov., \$263,000, making its total expenditure from June, 1861, to Dec., 1864, \$2,731,208.79. The value of articles received in kind as contributions by the Commission, from June, 1861, to Oct., 1864, was \$8,406,272.78, of which \$5,286,489.85 consisted of bedding, hospital furniture, and wearing apparel; \$1,862,560.42, of hospital food and delicacies; \$298,487.28, of miscellaneous supplies, and the remainder unspecified articles. The branches of the Commission, twelve in number, had furnished supplies to local institutions, soldiers' families, hospitals, &c., to the amount of between two and three millions more. Previous to July 1, 1864, the cost of distribution was only 3.76 per cent. of the amount distributed. The heavy expense of chartering steamers and employing auxiliary relief agents, &c., during the campaign of 1864, increased the cost of distribution to 4.88 per cent. of the value of the supplies distributed.

During the autumn and winter of 1863-'4, and the spring and summer of 1864, a series of fairs were held in several of the principal cities of the Union, in the interest of the Commission and its branches. These fairs were more gigantic in their conception and execution, and yielded larger returns than any enterprises of the kind ever attempted in this country. The Chicago fair, the first held, realized about \$80,000 net; that at Boston, about \$140,000; Cincinnati, \$240,000; Albany, \$80,000; Cleveland, about \$80,000; Brooklyn, N.Y., \$401,000; New York City, \$1,200,000; Pittsburg, \$100,000; Baltimore, \$55,000; Philadelphia, \$1,080,000. Several of the smaller cities collected at fairs for the same object, from \$10,000 to \$20,000. These sums were not, except in the case of the New York and Philadelphia fairs, paid wholly into the treasury of the parent Commission, a part, and in some cases the whole, being reserved for the purchase of supplies and material, and the support of local institutions for the soldiers or their families. The supplies and material thus purchased, of course, have since appeared, or will eventually appear, in the receipts in kind of the parent Commission.

II. THE WESTERN SANITARY COMMISSION. This organization is entirely distinct from the United States Sanitary Commission, but, like that, knows no State boundaries, but ministers alike to the needs of soldiers from all the States, though from its location it has only supplied the wants of Western armies, and of the freedmen and white refugees of the Mississippi Val-

ley. It derived its first authority to act from the following order of Maj.-Gen. Fremont:

HEADQUARTERS, WESTERN DEPARTMENT,
St. Louis, Mo., Sept. 5, 1861.

Special Order No. 159.

With a view to the health and comfort of the volunteer troops in and near to the city of St. Louis, a Sanitary Commission is hereby appointed, to consist of five gentlemen, who shall serve voluntarily, and be removable at pleasure. Its general object shall be to carry out, under the properly-constituted military authorities, and in compliance with their orders, such sanitary regulations and reforms as the well-being of the soldiers demands.

The Commission shall have authority, under the directions of the Medical Director, to select, fit up, and furnish suitable buildings for army and brigade hospitals, in such place, and in such manner as circumstances require. It will attend to the selection and appointment of women nurses, under the authority and by the direction of Miss D. L. Dix, General Superintendent of the nurses of Military Hospitals in the United States. It will cooperate with the surgeons of the several hospitals in providing male nurses, and in whatever manner practicable, and by their consent. It shall have authority to visit the different camps, to consult with the commanding officers, and the colonels and other officers of the several regiments, with regard to the sanitary and general condition of the troops, and aid them in providing proper means for the preservation of health and prevention of sickness, by supplies of wholesome and well-cooked food, by good systems of drainage, and other practicable methods. It will obtain from the community at large such additional means of increasing the comfort and promoting the moral and social welfare of the men, in camp and hospital, as may be needed, and cannot be furnished by Government regulations. It will, from time to time, report directly to the commander-in-chief of the department the condition of the camps and hospitals, with such suggestions as can properly be made by a Sanitary Board.

This Commission is not intended in any way to interfere with the Medical Staff, or other officers of the army, but to cooperate with them, and aid them in the discharge of their present arduous and extraordinary duties. It will be treated by all officers of the army, both regular and volunteer, in this Department, with the respect due to the humane and patriotic motives of the members, and to the authority of the commander-in-chief.

This Sanitary Commission will, for the present, consist of Jas. E. Yeatman, Esq.; C. S. Greeley, Esq.; J. B. Johnson, M. D.; George Partridge, Esq.; and the Rev. William G. Eliot, D.D.

By order of Maj.-Gen. JOHN C. FREMONT.
J. C. KELTON, Ass't. Adj't.-Gen.

The authority conferred by this order was recognized and confirmed by Maj.-Gen. Halleck, who added Dr. S. Pollak to the Commission, and still later, viz., December 16, 1862, by an order from the Secretary of War (Hon. E. M. Stanton), extending the field of its labors, and reappointing the members of the Commission as at first constituted.

This Commission has not devoted its attention to as wide a range of topics as the United States Sanitary Commission, but has confined itself to the work of superintending hospitals, furnishing supplies, appointing nurses, visiting and caring for the sick and wounded of the army of the Southwest Frontier, the District of East Arkansas, the armies operating on both sides of the Mississippi, and the Mississippi Naval

Flotilla; it has at all times acted in concert with the Medical Directors and Inspectors of these armies, and on account of their efficient supervision of the condition and sanitary wants of the armies under their charge, has not found it necessary to appoint separate medical inspectors. It has the superintendence of twelve hospitals (one for officers and another for military prisoners), having accommodations for about eight thousand patients, besides ten large hospital steamers and floating hospitals; it has established Soldiers' Homes, and Soldiers' Lodges, at St. Louis, Memphis, and Columbus, Ky., and agencies at Helena, Milliken's Bend, and Springfield, Mo., and has prepared, published, and distributed a large edition of a "Treatise on the Preservation of the Health of the Soldier, the cooking of food, the preparation of diet for the sick, the duties of nurses and attendants, and the organization and general management of hospitals." It has during 1863 and 1864 given special attention to the necessities of the freedmen in the Mississippi Valley, and its officers have interested themselves in the adjustment of wages, and in securing just and considerate treatment of the emancipated slaves from those who have rented the plantations, which had been abandoned by rebel owners. The Commission has expended about \$40,000 in the relief of freedmen. It has also kept a registry of the location and condition of invalid and wounded soldiers in the Western armies. It has also provided to a considerable extent for the large number of white refugees from the States in insurrection, who have drifted into St. Louis, and were in a condition of great suffering.

The Western Sanitary Commission has received from its organization to January, 1865, a little more than \$1,000,000 in cash, of which \$500,000 was the net result of a fair held in St. Louis, in May, 1864; and about \$2,000,000 in supplies.

III. OTHER SANITARY COMMISSIONS. Two or three of the Western States have established organizations dependent partly upon legislative grants, and partly upon contributions, for the care of the sick and wounded soldiers of their respective States, and their families, to which they have given the name of "State Sanitary Commissions."

They have generally expended their moneys for those services which may be more appropriately rendered to a soldier by his own State, or its representatives, than by others, such as the furnishing means of reaching home during a furlough, or of reaching his regiment when he has been detained from it by sickness; the procuring of the allotment of his pay or bounty, or the rendering him contented by the care of his family. The Indiana State Sanitary Commission, fostered and prompted by the energetic and patriotic Governor of that State, has accomplished much good in this way, and up to February, 1864, had expended \$320,000 in its succor of Indiana soldiers. The Iowa State San-

itary Commission has been also very efficient. It has expended \$175,500 to February 1, 1864. An organization of a similar character, though we believe not with the same name, exists in Wisconsin, having originated with the late lamented Governor, Louis P. Harvey, who lost his life in a journey to the field of Shiloh, to distribute its bounties. It has contributed largely to the aid of the soldiers, and its benefactions have not been confined to those from Wisconsin. In Illinois, there is an officer called a Commissioner-General, whose function it is to collect stores and supplies from the towns and counties of the State and send them forward for distribution, after each great battle. In New York, a State Soldiers' Depot was established in July, 1863, in Howard street, New York City, and received an appropriation from the State Legislature of \$200,000, which combines the character of a Soldiers' Home, hospital, and reading-room, and has its couriers on each train on which New York and other soldiers come from the Army of the Potomac, and meets them coming from other points, by steamers or otherwise, cares for the comfort of the sick and wounded, administering, under the direction of its surgeon, cordials and nutriment while in transit, protects them from the sharpers who would plunder them, and in every way looks after their interests. It has expended since its organization in June, 1863, about \$65,000 in money, and has distributed clothing, etc., to the amount of over \$18,000 more. It has fed and lodged over 15,000 soldiers, and given aid and counsel to thousands more. The plan for establishing national cemeteries in the vicinity of our great battle-fields, at Gettysburg, Antietam, Chattanooga, etc., has been greatly promoted by its earnest advocacy.

One of the best of the institutions of this class is "The New England Soldiers' Relief Association," located at 194 Broadway, New York, and organized April 3, 1862. Its founders and supporters were New England men and women, but its doors have been opened to, and its charities lavished upon, the soldiers of every State. That a soldier was on furlough, or sick or wounded, discharged, or in trouble, has been ever a sufficient passport to its halls and its sympathies. Since its organization it has received, registered, lodged, fed, aided, and clothed, sick and wounded or disabled soldiers from thirty-one States, the District of Columbia, the regular army, the navy, and the Invalid Corps, to the number of about 45,000, and has fed or lodged, and rendered assistance to many thousands more, who were not sick, wounded, or disabled. It has a Hospital Record and Directory, very full and complete, of the inmates of all the military hospitals of New York and New England, which is kept up to date by daily reports from each hospital, and gives full particulars in regard to the location, condition, and final disposition of each patient. This register contains about 40,000 names, and is so complete that the Sanitary Commission,

in February, 1864, relinquished theirs for that Department, in its favor. It has a good hospital for the sick or wounded soldiers, with a skilful surgeon, careful attendants, and assiduous volunteer night watchers; furnishes an asylum to those unfortunate soldiers who, discharged from the service without means, find themselves homeless and shelterless, giving them a home till employment can be provided for them. It also interests itself in procuring transportation, bounties, and back pay for the soldiers, and furnishing information to the friends of those who are sick, or have died, relative to procuring their dues. Religious services are conducted every Sabbath at its rooms. Much of the service rendered, including that of the Superintendent, is voluntary, and without compensation. Indeed, the Superintendent has, in addition, paid large sums from his own pocket, for the relief of soldiers, in cases where such relief could not properly come from the State funds, or the funds of the Association. The Superintendent of this Association acts also in the capacity of State Military Agent for the States of Maine, New Hampshire, Vermont, Massachusetts, Wisconsin, Minnesota, and Indiana, and is authorized to render such assistance as may be needed to the soldiers of those States coming to New York.

SANTANA, PEDRO, an ex-President and General of San Domingo, born in the early part of the present century, died in San Domingo June 14th, 1864. He first brought himself into notice in 1844, when by his successful efforts to secure the independence of the Dominican republic of the island of Hayti he acquired from his countrymen the title of the "Liberator." In the same year he was elected President of the republic, which office he held until 1849. During this period treaties were concluded with France and Great Britain, and the new nation was established on a firm footing. Retiring from office upon the election of his successor Jimenes, in 1849, he was almost immediately afterwards called to assume the dictatorship upon the invasion of the country by Soulouque, the Haytien emperor, whom he defeated in a decisive battle near Savanna Numero on April 22d. Jimenes having fled the country, Baez was elected the constitutional President and Santana laid down his dictatorship. In 1853 he was reelected for another term of four years, distinguishing himself in 1855 and 1856 by signally defeating Soulouque, and in 1857 he was again succeeded by Baez, who signalized his return to power by becoming the leader of the clerical or reactionary party. So distasteful did this prove to the people that in September, 1857, Santana was enabled to head a revolutionary movement which led to the expulsion of Baez in the succeeding year, and the restoration of liberal rule. When, in the spring of 1861, the Spanish Government, taking advantage of the confusion prevailing in the United States, undertook to reannex the Dominican republic to its domin-

ions, Santana became, by means of bribes, a ready instrument to effect this purpose. By his proclamation of March 18, 1861, he announced the union of the State with Spain, and was rewarded with a lieutenant-generalship in the Spanish Army, a title of nobility, and various decorations. That his action was not in accordance with the wishes of the people was seen in the sanguinary resistance to Spanish rule which followed, and which will prove in all probability successful. Santana died hated by his countrymen and neglected by those to whom he had assumed to sell the republic.

SCHLESWIG-HOLSTEIN. The two duchies of Schleswig and Holstein, together with the duchy of Lauenburg, were formerly dependencies of the crown of Denmark; but on the death of King Frederic VII., the difference of opinion as to the lawful successor of the late king in the duchies, where the salic law had formerly been in force, led to a war of Austria and Prussia against Denmark, which terminated in a treaty of peace, concluded at Vienna on Aug. 1st, 1864, and providing (in the 1st paragraph) that "His Majesty the King of Denmark renounces all his rights to the duchies of Schleswig-Holstein and Lauenburg in favor of their Majesties the King of Prussia and the Emperor of Austria, engaging to recognize the arrangements their said Majesties shall make in respect of those duchies."

The question of succession was not solved at the close of the year 1864. The chief claimant was Frederic, prince of Schleswig-Holstein Sonderburg Augustenburg, born July 6th, 1829. His chief competitor was the grand-duke of Oldenburg; but Prussia indicated that she also would present a claim, if not to the lawful succession, yet to the right of possession of the duchies, or, at least, of a part of them.

On Dec. 7th, 1863, the Federal Diet of Germany, on the motion of Austria and Prussia, resolved to execute the federal laws against Denmark, and compel her to revoke the fundamental law of Nov. 18, 1863, as far as the duchies of Holstein and Lauenburg are concerned, as inconsistent with the rights of these duchies and of the German confederacy, of which they form a part. The decision of the question of succession was reserved. A motion for a "federal occupation" of Holstein and Lauenburg was rejected, as prejudging the decision of the question of succession. Austria, Prussia, Saxony, and Hanover were ordered to furnish a contingent for the federal army, which was to take possession of Holstein; but only the forces of the two latter States were to march into the duchies, while those of Austria and Prussia were to form a corps of observation. The whole federal army was placed under the chief command of the Saxon General Hake. On the approach of the German troops, the Danes evacuated the duchies of Holstein and Lauenburg, with the exception of a small strip of land to the north of the Eider (the crown,

works at Rendsburg, and six villages claimed by the Danes as belonging to Schleswig).

The Federal Commissioners, which accompanied the federal army, at once organized a provisional Government. The "Holstein Government," which had been established on Nov. 12th, 1862, by the King of Denmark at Ploen, for the administration of the duchies, was abolished and a "Ducal Government" established at Kiel.

The Prince Frederic of Augustenburg suddenly and unexpectedly arrived at Kiel on Dec. 30th, 1863, and addressed a proclamation to the people announcing his arrival and his accession to the Government as Frederic VIII., Duke of Schleswig-Holstein. He was received by the people with great and unanimous enthusiasm. All the towns of Holstein sent deputies to the duke, to pay him their homage, and the clergy, at a meeting held at Neumunster, on Jan. 15th, unanimously resolved to petition the Diet to recognize the rights of Duke Frederic.

On Dec. 28th, 1863, Prussia and Austria proposed to the Federal Diet to summon the Danish Government not to execute, with regard to the duchy of Schleswig, the fundamental law of Nov. 18th, 1863, and to declare, that in case of a refusal on the part of Denmark, the Germanic confederation would be obliged to procure, by means of a military occupation of Schleswig, a pledge for the accomplishment of their legitimate wishes. This proposition was, on Jan. 14, 1864, rejected by 11 against 5 votes, viz.: Austria, Prussia, Hesse-Kassel, Mecklenburg, and 16th "curia" (the States casting collectively the 16th vote).^{*} The two great powers, Prussia and Austria, declared that they would henceforth carry out their proposition, not as members of the German Diet, but as great powers of Europe. Bavaria, Saxony, Wurtemberg, Baden, Hesse-Darmstadt, Saxe-Weimar, Meiningen, Coburg-Gotha, the 13th and 15th "curia," protested against this declaration. On Jan. 16th Austria and Prussia notified the Danish Government that they would recall their ministers, if the constitution of Nov. 18th, 1863, were not withdrawn within forty-eight hours. In reply the Danish Government, on Jan. 18th, demanded a delay of six weeks, in order to give it time to convoke the Rixrad of Denmark and Schleswig, and deliberate with it concerning a change in the constitution of Nov. 18. This demand was rejected by Austria and Prussia. On the other hand, the Prime Minister of Denmark, Bishop Monrad, declared on Jan. 27th to the Landsting that the Danish Government would never consent to a union of Schleswig with Holstein, or to an autonomy of Schleswig, or to a division of the duchy.

The Prussian and Austrian troops, on Jan. 17th, began to move, without obtaining previous authority from the Governments concerned, or from the Federal Diet, through the

territory of Oldenburg and Hamburg. On Jan. 21st they entered Holstein. On the next day the Federal Diet gave its consent to the march of the Austrian and Prussian troops through Holstein, after having previously (Jan. 19th) received the assurance from these two powers that they would in no way obstruct the action of the federal commissioners, or the commander-in-chief of the federal troops. On Jan. 30th the Field-Marshal, Gen. Wrangel, commander-in-chief of the "Austro-Prussian Army for Schleswig-Holstein," summoned Lieut.-Gen. de Meza, general in chief of the Danish Army, to evacuate Schleswig. This demand was, on Jan. 31st, rejected by the Danish general.

On Feb. 1st the Austro-Prussian army crossed the Eider, extending its line from Kiel to Rendsburg, the Prussians forming the right wing under command of Prince Frederic Charles of Prussia, and the Austrians the left wing under the command of Lieut. Field-Marshal de Gablenz. The Danish line, which extended from Eckenförde to Sörbörck, was driven back by the allies. The Austrian vanguard, under command of Maj.-Gen. Gondrecourt drove, on Feb. 3d, the Danes from the fortified positions of Jagel and Oberselk, and stormed the Koenigsberg. The Danish forces then withdrew behind the strongly fortified line of the "Dannevirke." This, however, became at once untenable, when, on Feb. 5th, the Prussians effected a passage over the Schley, opposite Arnis. Amidst constant skirmishing the Danes fell back to the fortifications of Duppel opposite the island of Alsens. In one of the engagements, which took place during this retreat, at Oeversee, Prince Wilhelm of Wurtemberg, who commanded one of the Austrian regiments, was seriously wounded. In a few more days the whole main land of Schleswig, with the exception of the fortifications near Duppel, was in the hand of the allies. Immediately on the retreat of the Danes, every town of Schleswig proclaimed Prince Frederic Duke of Schleswig. On Feb. 7th a proclamation from Gen. Wrangel announced to the people of the duchy the appointment of two Austro-Prussian civil commissioners for the administration of the duchy (Baron de Zedlitz for Prussia, and Count de Revertera for Austria). The commissioners, on Feb. 8, issued a proclamation declaring the power of the King of Denmark to be suspended and the laws of the country to remain in force; the expression "royal" authority and the use of the "royal" seal were prohibited; protection was promised to all who would submit to the authority of the general-in-chief; political societies and manifestations, especially such as would aim at prejudging the question of succession, were forbidden. On Feb. 17th the commissioners issued a decree suspending the constitution of Nov. 18, 1863, and by another decree issued two days later, they reestablished the use of the German language in the churches and schools in the places in which it had been suppressed by the Danish edicts of 1851.

^{*} For the composition of the Federal Diet, see the article Germany in the ANNUAL CYCLOPEDIA for 1863.

In the meanwhile, serious difficulties had arisen between the Prussian and the federal armies. On Feb. 9 General Wrangel notified General Hake, the commander of the federal troops, that to assure the operations of war, it was indispensably necessary for him to have the cities of Altona, Neumünster, and Kiel, occupied by Prussian troops. The federal general, on Feb. 11, refused to accede to this demand, but notwithstanding this refusal and the protest of the federal commissioners, the Prussian troops entered Altona on Feb. 12. On the same day an order from Frankfurt authorized Gen. Hake to receive them.

This conflict added to the irritation which had already existed between Austria and Prussia on the one hand, and the majority of the minor States, headed by Bavaria, on the other. On Feb. 11 the committee of the Federal Diet on Schleswig-Holstein presented the report. The majority proposed: 1. That the protocol of London (the treaty of May 8th, 1852) had no obligatory force for Germany. 2. That the Confederation cannot recognize it, and cannot take it as the basis of its decisions. 3. That, consequently, the powers of the envoy of King Christian IX. near the Diet cannot be admitted. 4. That, on the contrary, the committee be invited to present, as soon as possible, its report on the question of succession. The minority, Austria and Prussia, proposed to reject this motion, and instruct the committee to examine the question of succession in the duchies of Schleswig-Holstein and Lauenburg. The vote on these motions was taken on Feb. 25. Articles 1 and 2 of the proposition of the majority were rejected by 9 votes against 7; but articles 3 and 4 adopted by the same majority of 9 against 7. In the same session, Austria and Prussia demanded that the chief command of the army of the federation be transferred to the general-in-chief of the allied army, and that the Diet approve the nomination of two new civil commissioners for Holstein, by Austria and Prussia. On March 3d a vote was taken on the proposition made by the two great powers, when 6 voted for it and 8 against, and 7 for referring it to a committee.

Notwithstanding the threats of the English Government that England would not allow the allied troops to pass beyond the frontier of Schleswig, the Prussians, on Feb. 18th, crossed into Jutland, and on the next day occupied Kolding. Their advance was obstinately opposed by the Danes, but on March 15th the whole of Jutland as far as the Lymfjord, was occupied by the allies. The most desperate struggle of the war was near the fortifications of Duppel. On March 17th the Prussians occupied the villages of Rackebull and Duppel. On March 29th they completed the first parallels against the intrenchments. On April 18th, after a furious bombardment from 118 guns, lasting for several hours, the fortifications of Duppel as well as the *tête de pont* of Sonderberg, were stormed by the Prussians, who cap-

tured on this occasion 8,790 prisoners. The total loss of the Danes, in killed, wounded, and missing, was 106 officers and 5,500 men; while the loss of the allies amounted to 16 officers and 213 men killed, 54 officers and 864 men wounded, and 39 missing; total, 70 officers and 1,116 men. The occupation by the allies of Duppel, put them in possession of the entire mainland of the duchy of Schleswig. On April 29th the Danes evacuated the fortress of Fredericia, the only fortified place which they still held in Jutland.

These reverses disposed the Danes favorably toward the proposal of England to hold a conference at London consisting of the representatives of the great powers of Europe, of the belligerent powers, and of Sweden, for the purpose of attempting a peaceable solution of the difficulty. The Conference (*see LONDON CONFERENCE*) declared on May 9th in favor of an armistice, which was acceded to by the representatives of both the belligerent parties; but before this decision was known by the governments of the belligerent States, and acted upon, a naval engagement took place, on May 9th, near Heligoland, between 2 frigates and 1 corvette on the side of the Danes, and 2 Austrian frigates and 2 Prussian gunboats on the other. When one of the Austrian frigates caught fire, it was deemed necessary by the allied fleet to relinquish the combat and retreat to Heligoland.

The London Conference did not succeed in bringing on peace, and on June 26th hostilities were resumed. On June 29th the allies forced a passage to the island of Alsén, which the Danes were compelled to abandon in the greatest haste. Jutland was placed under Austro-Prussian administration, and all the islands to the west of Schleswig occupied in rapid succession. The Danes had hitherto hoped for aid from England, but when the debate in the English Parliament clearly showed that neither the ministry nor the opposition (the Tories) intended to go to war in their behalf, they consented to a new suspension of hostilities, at a conference held at Christiansfeld, July 18th. On June 26th, a Peace Conference of plenipotentiaries of the three powers was opened at Vienna, and on August 1st the preliminaries of peace were signed. They provide for the cession by Denmark of the duchies of Schleswig-Holstein and Lauenburg, a complete suspension of hostilities until Sept. 15th, the right to terminate the armistice after six weeks of previous notice, and the continuance of Jutland under the administration of the allies until the conclusion of peace. The details of the arrangement were not agreed upon until Oct. 30th, on which day the definite treaty was signed.

The treaty contains twenty-four articles and a few supplements. Article one simply reproduces the corresponding article of the peace preliminaries in which the King of Denmark cedes all his rights to the duchies of Schleswig-Holstein and Lauenburg, in favor of the King of Prussia and the Emperor of Austria.

As equivalent for the Jutland territory of Mogel, Tondern, the Island of Amrom, the Jutland portion of the islands of Föhr, Sylt, Römsoe, &c., which Denmark has ceded to the Duchies, a portion of northern Schleswig has been restored to Denmark. The peninsula of Stenderup, opposite Fühnen, is included in Danish Schleswig. In granting this compensation for the Jutland *enclaves*, which was earnestly desired by Denmark, owing to the strategic position of the ceded territory, the German powers wished to show that the separation of Schleswig from the Danish monarchy was not a first step toward the dismemberment of Denmark. Upon the other hand, the peace treaty contains no stipulation guaranteeing the Danish population living in German Schleswig, the right of their national language.

Article six stipulates for the nomination of a mixed commission of Prussian, Austrian, and Danish plenipotentiaries to settle the details of the new boundary line upon the spot.

Article seven contains arrangements respecting private landed property, which will be bisected by the new frontier.

The following articles are devoted to financial matters. The portion of the Danish debt which falls upon the Duchies amounts to twenty-nine million rigsdalers (about £3,280,000). The manner in which this sum is to be repaid to Denmark by the Duchies, is stipulated by the treaty.

Denmark further bound herself to return the captured German ships, with their cargoes, wherever the latter have not been already sold. In such cases Denmark undertook to compensate the owners.

The treaty was approved on Nov. 9th, in the Folkething (Lower House of the Danish Rigsraad), by 75 against 21 votes; and, on Nov. 11, in the Landsting (Upper House), by 55 votes against 4. All the deputies present from Schleswig and the enclaves ceded by the treaty to the German powers, either voted against the treaty or not at all. The bill was at once signed by the king, and on Nov. 17th three royal proclamations were issued. The first releases the inhabitants of the ceded Duchies from their oath of allegiance, and the second is a farewell address to the people of Schleswig and Holstein. The third is addressed to the Danes, and says: "The separation from the kingdom of those inhabitants of Schleswig who were bound to Denmark both by sentiment and language, is the most painful sacrifice of all. We have lost much, but have not lost hope; the future belongs to those who are in earnest."

SCHMUCKER, SAMUEL MOSHEM, LL.D., an American author, born at New Market, Va., Jan. 12, 1823, died in Philadelphia, May 12, 1868. At ten years of age he entered the Classical Academy of New Market, and was admitted in 1836 to the Pennsylvania College, located at the same place. He proceeded as far as the junior class, and went, in 1838, to Washington College, where he graduated in

September, 1840. On his return home from college, Mr. Schmucker commenced the study of theology in the Gettysburg Theological Seminary, and in October, 1842, was licensed to preach by the Lutheran Synod at Bloomfield. Soon after, he received and accepted a call from the Lutheran Church in Lewiston, Pa., to become their pastor, being then but twenty years of age. In 1845 he accepted a call from the first Lutheran Church in Germantown, and during his residence there improved himself greatly in theological learning. After three years at Germantown, he resolved to withdraw from the ministry, a determination resulting from the fact that he did not find the anxious duties and thankless responsibilities of the clerical profession very congenial to his disposition. In October, 1848, he resigned his church, received an honorable dismissal from the Synod to which he belonged, removed to Philadelphia, and entered upon the study of the law. During the progress of his studies Mr. Schmucker was an active member of the Philadelphia Law Academy, and at one time was the secretary of that institution. In January, 1850, he was admitted to the bar, and immediately commenced the practice of his profession with the most flattering prospects.

In March, 1853, he removed to New York city and entered into partnership with Judge Drinker, but after two years' practice, preferring Philadelphia as a residence, he returned there, and opened an office, but employed himself chiefly in writing; his favorite department being history and biography. His principal works were: "The Errors of Modern Infidelity" (1848); "The Spanish Wife" (1854); "Catharine the II. Empress of Russia" (1856); "Nicholas I. of Russia" (1856); "Col. John O. Fremont" (1856); "The Yankee Slave Driver" (1857); "Alexander Hamilton" (1857); "Thomas Jefferson" (1857); "Memorable Scenes in French History" (1857); "History of the Mormons" (1858); "Life of Dr. E. K. Kane" (1858); "Life of Napoleon III." (1858); "The Arctic Explorations" (1859); "Memoirs of Daniel Webster" (1859); "History of all Religions" (1859); "History of the Four Georges" (1860); "History of the Modern Jews" (1860); "Life of Washington" (1860); "Life of Henry Clay" (1860); "Blue Laws of Connecticut" (1860); "History of the Southern Rebellion" (1863).

SCHOOLCRAFT, HENRY ROWE, LL.D., an American ethnologist, born in Albany County, N. Y., March 28th, 1793, died at Washington, D. C., December 10th, 1864. At the age of 14 he became a member of Middlebury College, Vt., where he soon evinced a decided fondness for the physical sciences. He also pursued with great eagerness the study of Hebrew, German, and French. His father being the superintendent of a glass-house, he studied the art of glass-making, and in 1816 commenced the publication of a work on "Vitrology," which was never completed. During the next

year he made a journey to the West, and after his return with an extensive mineralogical and geological collection, he published "A View of the Lead Mines in Missouri," and a narrative of travel, since enlarged, under the title of "Scenes and Adventures in the Semi-Alpine regions of the Ozark Mountains of Missouri and Arkansas," (1853). In 1820 he was appointed geologist to an exploring expedition under Gen. Cass, to the copper region of Lake Superior and the Upper Mississippi, of which he published an account in 1821. In the course of the same year he was appointed secretary to an Indian commission at Chicago, and having travelled through Illinois and along the Wabash and Miami Rivers, published a book of "Travels in the Central Portions of the Mississippi Valley." In 1822, having received the appointment of Indian Agent on the northwestern frontier, he took up his residence at Sault Ste. Marie near Lake Superior, and afterwards at Matherian on Lake Huron, and married the granddaughter of a celebrated Indian chief, Miss Johnston, a lady of remarkable beauty and worth, who had been educated in Europe, and was no less distinguished for her intelligence and culture, than her personal attractions. From that time Mr. Schoolcraft became a diligent and successful student of Indian ethnology, poetry, and history; from 1828 to 1832 he was a member of the Legislature of Michigan, then a territory; in the former year he founded the Michigan Historical Society, and in 1831 the Algic Society at Detroit; two of his lectures before which on the grammatical construction of the Indian languages were translated by M. DuRoielle into French, and received a gold medal from the Institute. At this period of his life he published several poems, lectures, and reports on Indian subjects, and a grammar of the Algonquin language. In 1832 he was appointed to conduct a second Government expedition, and was the first to discover the source of the Mississippi, of which he published an account in 1834. Two years after, having been commissioned to treat with tribes on the Upper Lakes, he procured from them the cession of 16,000,000 acres of land to the United States. After acting for several years as Superintendent of Indian Affairs, and chief disbursing agent for the Northern Department, he removed to New York in 1841; visited Europe in 1842; and in 1845 was appointed by the State Legislature to make a census of the Six Nations, which was published in 1848, under the title of "Notes on the Iroquois." In 1847, under an appointment by the U. S. Secretary of War, he engaged in the preparation of a work on the Indians, of which six quarto volumes have appeared, entitled "Historical and Statistical Information respecting the History, Condition, and Prospects of the Indian Tribes of the United States."

In addition to the above publications, Mr. Schoolcraft was the author of several other interesting volumes relative to the Indian

tribes, the most important of which was "Algic Researches." In 1847 he was married again, to a lady of South Carolina, since which time he resided in Washington until his death.

SEALSFELD, CHARLES, a popular novelist, born in 1797, died at Solothurn, Switzerland, May 26, 1864. His nationality has been a matter of much dispute; it has been said that he was an American, a German, and an Englishman, and by some he was supposed to be of Austrian birth. For the greater portion of his life, however, America was his home. Since 1844 he had resided for the most part in Switzerland, and when the census of 1860 was taken there, he wrote himself down as "Charles Sealsfeld, citizen of the United States of America, belonging to another religion." His vigorous, graphic, and highly characteristic novels, tales, and travelling sketches, the scene of all of which is chiefly in America, have found translations both in England and in the United States, and have been made the subject of numerous articles in magazines and reviews. Most of his publications were written in German; one of the longest and most important of his romances, however, appeared first in English, at Philadelphia, in 1828, under the title of "Tokeah; or, the White Rose." This he afterwards translated into German, and published it four years later at Zurich as "The Legitimates and the Republicans." His "Trans-Atlantic Travelling Sketches," "Pictures of Life in both Hemispheres," and "South and North," abound in striking and vivid delineations of life and character, and have been surpassed by no English or American writer on the like topics; while his great Mexican novel, "The Viceroy and the Aristocracy," is, perhaps, the most powerful and original of all his works. Toward 1830 he was for a short time in Paris and London, occupied with journalism. His last work appeared in 1842.

SEDGWICK, JOHN, a Major-General of volunteers in the United States Army, born in Connecticut about 1815, killed near Spottsylvania Court House, Va., May 9th, 1864. He was graduated at West Point in 1837, 24th in a class of fifty members, among whom were Gens. Benham, Hooker, Arnold, French, and others of the Federal service, and the rebel Generals Bragg, Early, and Pemberton. He entered the Mexican war as first lieutenant of artillery, and was successively brevetted captain and major for gallant conduct at Contreras, Churubusco, and Chapultepec. He also distinguished himself at the head of his command in the attack on the San Cosmo gate of the city of Mexico. At the outbreak of the rebellion he held the position of lieutenant-colonel of the 2d United States cavalry. On April 25th, 1861, he was promoted to the colonelcy of the 4th cavalry, and on August 31st was commissioned a brigadier-general of volunteers and placed in command of a brigade of the Army of the Potomac, which in the subsequent organization of the army was assigned to

the Second Corps, under General Sumner, General Sedgwick assuming command of the 8d division of the corps. In this capacity he took part in the siege of Yorktown and the subsequent pursuit of the enemy up the Peninsula, and greatly distinguished himself at the battle of Fair Oaks, where the timely arrival of Sumner's troops saved the day. In all the seven days' fighting, and particularly at Savage Station and Glendale, he bore an honorable part, and at the battle of Antietam he exhibited the most conspicuous gallantry, exposing his person with a recklessness which greatly imperilled his life. On this occasion he was twice wounded, but refused for two hours to be taken from the field. On December 23d he was nominated by the President a major-general of volunteers, having previously been made a brevet brigadier general of the regular army, and in the succeeding February he assumed command of the Sixth Army Corps. At the head of these troops he carried Marye's Heights in the rear of Fredericksburg during the Chancellorsville campaign in May, 1863, and after the retreat of General Hooker across the Rappahannock, succeeded only by very hard fighting in withdrawing his command in the face of a superior force, against which he had contended for a whole day, to the left bank of the river. He commanded the left wing of the Army of the Potomac during the advance from the Rappahannock into Maryland in June, and also at the succeeding battle of Gettysburg, where he arrived on the second day of the fighting, after one of the most extraordinary forced marches on record, and where his steady courage inspired confidence among his tried troops. During the passage of the Rapidan on November 7th, 1863, he succeeded, by a well-executed manoeuvre, in capturing a whole rebel division with a number of guns and colors, for which he was thanked by General Meade in a general order. In command of his corps he took part in the spring campaign of the Wilderness, under General Grant, and on the 5th and 6th of May had position on the Federal right wing, where the hardest fighting of those sanguinary engagements took place. Three days later, while directing the placing of some pieces of artillery in position in the intrenchments in front of Spottsylvania Court House, he was struck in the head by a bullet from a sharpshooter and instantly killed. General Sedgwick was one of the oldest, ablest, and bravest soldiers of the Army of the Potomac, inspiring both officers and men with the fullest confidence in his military capacity. His simplicity and honest manliness of character endeared him, notwithstanding he was a strict disciplinarian, to all with whom he came in contact, and his corps was in consequence one of the best in discipline and *morale* in the army. He several times held temporary command of the Army of the Potomac during the absence of General Meade, but on more than one occasion declined the supreme command.

SEWERS. The plans for sewers in the various cities of this country have been formed upon the general system adopted in London, England. But this system has been found to be so defective that an entirely new intercepting plan of main drainage has been adopted. Its importance, therefore, from the influence it is likely to have here, is too great to be overlooked. The whole system, together with the advantages to be derived from it, may be briefly and summarily explained in the following words:

Before the Board of Works arose—as the *Times* expresses it—our efforts in the way of drainage were confined to the extremely simple expedient of running all drains into the Thames; in fact, of making the river our great main sewer, and how admirably our efforts succeeded the smell of the Thames in hot weather soon showed. Bad, however, as this system of drainage was, there was one thing even worse, which was the method of effecting it. The first drains and sewers made were in the old districts of the metropolis—that is, those districts which lay more or less close to the river on each side, and therefore the lowest in point of elevation of any in the city. It was hard to drain these parts at all, and it had to be done by taking the sewers so very much lower that it was only at dead low water they could empty themselves. As London grew, every year added enormously to the extent and danger of the evil, till scarcely any sewers could empty but at dead low tide, when the water in the river was at its *minimum*, and when the returning flood swept all the nauseous flotsam and jetsam back into the heart of the metropolis, and kept it churning backwards and forwards for another six hours in the open air. What effect this at last produced we all know, though what no one knows is why it did not bring a pestilence long ago. It is enough, however, to say that the evil was so severely felt, and the danger so pressing, that the intercepting scheme of main drainage was at last adopted, is now nearly half executed, and will before this time twelvemonth be entirely completed, with the exception of the small length to be laid in the Thames Embankment. The intercepting plan, as its name implies, consists in cutting three great main drains on both sides of the river, and which, instead of running due north and south, like the present system, run from west to east. These great main lines intercept and cut off all the existing lines of drains from the river, carry their contents away down to below Barking Creek and Erith Marshes, where they are poured into gigantic reservoirs, and afterwards, when decolorized, turned into the river at high tide, and swept away by the ebb almost to sea. Thus, the sewage is not only turned out free from smell, but turned out into a body of water nearly thirty times as great as that into which it used to be poured, and, instead of sickening the air at our very doors, becomes lost in the volume of water which

rolls down between the marshes on each side of the river to far below Gravesend.

On the north side of the Thames the intercepting sewers are divided, as we have said, into three distinct lines, two of which, called respectively the high and middle level sewers, unite at and pass over the River Lea; and the third, the low level, after passing through the Thames Embankment, will eventually join them at the proposed pumping station at Abbey Mills. Three parallel sewers, called the northern outfall sewer, each 9 feet by 9 feet, are constructed as one work, in a concrete embankment, and are carried by aqueducts over rivers, roads, and railways, to the Barking reservoir.

On the south side of the Thames there are three lines of intercepting sewers, which are also known as the high level, the middle level, and the low level, and these converge to one point at Deptford pumping station, where the sewage from the low level is lifted into the upper-level sewers, and their united stream flows thence deep under Greenwich and Woolwich, through one outfall sewer, 11½ feet in diameter, to the Crossness reservoir and pumping station in Erith Marshes. Three-fourths of London north of the Thames are, however, elevated so far above the river that the sewage can be conveyed by its own gravitation to the level of high water at Barking, and this is why the sewers are carried in an embankment at such a height above the level of the marshes, and no pumping station is needed at the outfall. But on the south side the levels are so low that this cannot be done, and therefore the outfall sewer is under ground, and a pumping station is placed at its outlet to raise the sewage into the reservoir.

The high, middle level, and outfall sewers on both sides of the Thames are now, with the exception of a few very minor connections and works, completed. The low-level sewer on the south side will be finished this year, but the short pieces of the northern low-level sewer cannot be completed until the Thames Embankment is finished. About one-third of the metropolitan sewage is now intercepted and discharged at the outfalls, and there can be little doubt that but for this the river would have been much more offensive this dry season than it has yet been.

The areas drained by the three levels on the north side are as follows:

	Square miles.
The Northern High Level takes the drainage of Hackney, Homerton, Stoke Newington, Stamford-hill, Hornsey, Holloway, Kentish-town, Hampstead, Highgate, and other localities, the total area of which is.....	9½
The Middle Level takes the drainage of Bow, Mile-end, Bethnal-green, Shoreditch, Kingsland, Islington, part of the City, Clerkenwell, Holborn, Oxford-street, and from Bayswater to Kensal-green, and other localities, the total area of which is.....	17½
The Low Level takes the drainage of Poplar, Limehouse, Shadwell, Radecliffe, part of the City of London, Westminster, Finsbury, Chelsea, Brompton, Fulham, Hammersmith, and adjoining localities, the total area being.....	28½
Total.....	55½

The northern outfall reservoir is situated at the point where Barking Creek falls into the Thames, a little east of Woolwich, and 11½ miles below London-bridge. This covers an area of about ten acres, and is capable of containing 6,248,000 cubic feet, or 89,000,000 gallons. Its depth is about seventeen feet, and it is divided into four compartments. There are sixteen openings in the side of the outfall sewers through which the sewage flows into the reservoirs, as regulated by the penstocks; and underneath them are sixteen openings, also regulated by penstocks, for the outflow of the sewage into the river at the time prescribed. The discharge culverts into the river are visible only at the time of low water; they are nine in number, and in front of them is a stone-paved apron, over which the sewage glides, without leaving any deposit, into the river.

The machinery provided is of 500 nominal horse power, consisting of four double-acting condensing engines, each working two single-acting ram-pumps, or sets of plungers. The beams are 40ft. long; the fly-wheels, 27ft. diameter and 50 tons weight each; the cylinder is 48in. diameter and 9ft. stroke; and the plungers (eight to each engine) are 4' 6" diameter; half of them with 4' 10" stroke, and the remainder with 2' 8" stroke. The pump-cases are 12ft. diameter; the two delivery-troughs or outlets from the pumps are each 32ft. long, 11½ft. wide, and 10ft. high. The 12 boilers are each 6ft. diameter and 80ft. long. The engine-house is about 154ft. long, and about 58ft. wide; the boiler-house about 112ft. by 64ft. The chimney-shaft when completed, will be about 200ft. high; the coal-sheds extend along one side of the reservoir for a length of about 580ft., and are about 48ft. wide. The entire area of the works, including the reclaimed ground and adjoining land, is about 86 acres. A telegraphic wire is fixed along the centre of the arch of the outfall sewer between Deptford and Crossness, so that in case of accident to the machinery or other works at either end the fact may be instantly made known and assistance procured. The southern reservoir has an area of about six and a half acres, is seventeen feet deep, and is capable of holding 4,840,000 cubic feet, or 27,000,000 gallons, in its four compartments.

The drainage from the low-lying districts of Rotherhithe, Bermondsey, Newington, Vauxhall, Wandsworth, Putney, and other places, will be previously pumped at the station at Deptford Creek from the low-level sewer up to the high-level sewers, which carry off the drainage of Nunhead, Dulwich, Norwood, Brixton, and Clapham. From Deptford the united stream will flow through the outfall sewer to Crossness pumping station, where it will be lifted into the reservoir. The *maximum* quantity of sewage to be pumped is estimated at 8,000 cubic feet per minute, and the lift as varying from 10 to 20 feet. Triple culverts

convey the sewage to and from the pumps, and are built over each other to avoid the expense of separate foundations.

The course of the sewage is from the outfall sewer along the low-level culverts to the pumps; thence to the reservoir along the high-level culverts; and thence either to the low-water outlets, or to the deep outlet, along the middle-level culverts, into the river. In addition to the sewage which will accumulate in the reservoir between the periods of discharge, the reservoir will provide for storing rain to an extent which probably will not be exceeded more than a few days in the year, when the overflow may take place at a less favorable time of tide. In order to deliver the sewage into the river under as favorable condition as possible, the deep outlet is constructed with a series of 12 iron pipes, 52in. in diameter, extending for a considerable distance under the fore-shore. About 120 penstocks, or sluices, are fixed in various places, nearly 100 of the number being in the reservoir. For about 1,200ft. the river will be embanked by a retaining wall of brickwork, built on caisson foundations and capped with granite; the wall will be backed up with concrete, and the reclaimed ground filled in and levelled. The contracts, both for the buildings and the engines, are in a forward state, and it is hoped will be completed by the end of the year. Cottages will be erected for a superintendent and a staff of workmen, to reside at the works, so that constant supervision and attendance may be given.

SIEMAN PROCESS, (THE). An invention of vast importance to American mines and manufactures has recently been introduced at Pittsburgh. After careful and thorough experiments, its merits are now fully established. It is essentially a new method of generating and applying heat in the processes of metallurgy, and is called the "Sieman Furnace." The inventor is a German, residing in Great Britain, where, as well as on the continent, the new furnaces are being extensively and successfully worked. The principle is applicable to all processes of reducing, refining, and working metallic ores, or metals, and, indeed, wherever heat in large quantities is required.

In furnaces of the old style, the solid fuel, whether it be wood, charcoal, peat, or pit coal, is usually placed in immediate contact with the material to be heated. In the case of steel, glass, zinc, etc., the substances are enclosed in retorts or pots to protect them. The Sieman process makes a radical departure from the old process at the outset. A "producer" (a receptacle of very simple construction) receives the coal. It is converted into gas by slow combustion, and conveyed through flues into the furnaces, where the heat is required. Here it combines with atmospheric air, and burns rapidly, producing a degree of heat adequate to all purposes required in the arts. This producer is of course entirely independent of the fur-

nace. It may be of almost any conceivable capacity, furnishing gas for one or any number of furnaces. The gas producer of moderate size is a chamber, say six feet by twelve, and ten feet high. One of its end walls contains a fire-grate reaching to half its height, inclined at about such an angle as a heap of coals would naturally take, say from 40 to 60 degrees, according to the quality of coal.

The upper portion is inclined also, but is made of solid iron plates, covered with fire-brick. Stopped holes are provided for the introduction of an iron bar to break up the fuel and detach clinkers. The fuel is introduced through apertures above, which are usually kept closed. It is introduced in small quantities, from time to time, as the supply is consumed. The coal being ignited at the lower portion of the grate, burns slowly under a moderate draft, parting first with its most volatile ingredients—water, ammonia, etc., and yielding hydro-carbon gases and some carbonic acid. The combustion is now continued by admitting a gentle current of air through the grate.

At the lower part of the grate carbonic acid is formed of the union of the carbon of the coals with the oxygen of the air. The gas ascends through the heated mass above, and losing half its oxygen, becomes carbonic oxide, a combustible gas of great heating value. The liberated oxygen also combines again with carbon, producing the same gas in equal quantity in its turn.

The atmosphere consists of about one part of oxygen to four parts of nitrogen by weight. The nitrogen is incombustible and tends to diminish the richness or heating power of the other gases. In order to balance this loss and secure oxygen in sufficient quantity, water is brought in a small pipe and slowly introduced at the bottom of the grate. The spare heat converts it into steam, which, traversing the burning mass of fuel, is decomposed by this powerful heat into hydrogen and oxygen. The latter forms carbonic oxide in the same manner as the oxygen of the air, while the former is a well-known combustible gas in its pure state. Each cubic foot of steam thus produces as much inflammable gas as five cubic feet of air. This will be obvious when it is remembered that water consists of eight parts of oxygen to one of hydrogen, by weight. The generation of steam being dependent upon the amount of heat in the fire, regulates itself naturally to the requirements of the combustion. The total production of the combustible gases varies, of course, with the amount of air admitted; and since the admission of air into the grate depends, in its turn, upon the consumption of the gases evolved, the production is always regulated by the demand in the heating furnaces. The production of gas may be arrested for several hours without deranging the process or wasting the material. The mass of the fuel and the brick-work retain sufficient heat, dur-

ing an interval of a day even, to produce combustion when a new supply is required. The combustible gases having been formed as above described, are made to pass some distance through a large flue, during which passage they are cooled, and made to precipitate any small amount of sulphur which may have passed with them from the coal. They enter the furnace purified from all materials noxious in metallurgical processes, and are now prepared for combustion.

It is necessary to have an excess of pressure in the main gas flue above that of the air, in order to prevent any inward draft, which would produce partial combustion in the gas, thus diminishing the heating power and clogging the flues with soot. The gas must therefore be put into the furnace, without a chimney draft, which can be done by placing the producers at a lower level than the furnaces. If this is impracticable, another expedient is used. The mixed gases leaving the producers have a temperature of 800 degrees to 400 degrees Fahrenheit which must in all cases be sacrificed, as it makes no difference as to the result, at what temperature the gas to be heated enters the regenerators or air chambers. The final temperature will always be that of the heated chambers of the furnace.

The initial heat of the gas is therefore made available for producing purposes. The gas is caused to rise about 20 feet, then carried about 20 to 30 feet horizontally, and let down into the furnace. The tube being exposed to the air causes the gas to cool and increases its density from 15 to 20 per cent., so that the column is urged forward into the furnace by the added weight of the cooler gases.

Under the furnaces, where the heat is to be used, chambers are built, packed with fire-brick, having open spaces between them. These are four in number, and are called regenerators. They work in pairs, the gas ascending through one, while air ascends through the next. The gas and air enter the furnace, and produce the heat due to their chemical union. At the other end of the furnace are similar outlets, connected with the other pair of regenerators. The combined gases, after doing their work in the furnace, pass down these outlets, still retaining a portion of their heat, which they impart to these regenerators, and move on to the chimney. The last-named regenerators soon become intensely heated by this treatment. The passages between these chambers are supplied with valves and deflecting plates, which act like four-way cocks. By the use of a lever, these regenerators and air ways, which were carrying off the waste gases after combustion, can instantly be used for conducting gas and air into the furnace, while those which before carried gas and air in, now take out the exhausted gases to the chimney. By this simple expedient, an enormous amount of heat wasted in the old furnaces is saved. The gas and air

entering by the reversal of the valves through the passages, raised to an intense heat by the outgoing refuse of combustion, take up what their predecessors had left. They enter the furnace at a white heat, and there add to their carried heat that due to their mutual chemical action. It is estimated that about 4,000 degrees of heat are thus carried, while 8,000 degrees are taken from the regenerator in passing. This intense heat, if not moderated, would melt down the most refractory materials of the furnace. In this manner the regenerators are alternately heated and cooled at such brief intervals as observation may indicate to be necessary. The result is that a vast economy of heat is effected, and at the same time the quality and quantity of the heat is under the control of the engineer every moment. The supply of gas depends upon the supply of air to the producer, and can, of course, be stopped by closing the draft. By placing the inlets for air or gas at less or greater distances, the combustion in the heating furnaces is made rapid or gradual at will. So, also, the heat can be directed upon particular points by nicely-adjusted contrivances, which the ingenious builder will apply for himself.

The advantages of this system, as claimed by the inventor, and demonstrated in practice, may be summed up as follows:

1st. It enables the manufacturer to use, profitably, that large class of soft coals which, owing to the presence of sulphur, or the excess of bituminous matter, are now worthless, or only applicable when used.

2d. It gives unlimited command of heat, without the intense chimney draft used in the old furnaces, at great cost.

3d. Great purity and gentleness of flame, which largely diminishes the oxidation or deterioration of material heated in the furnace, and improves the quality of the product.

4th. Great increased durability of furnace, owing to the absence of ashes, and perfect uniformity of heat throughout the works.

5th. Saving of space within the works, and cleanliness in operating, the fuel being converted into gas outside.

6th. The complete control of the intensity of the heat, and unlimited command of the chemical nature of the flame, which may be arrested wholly, or changed from a reducing to an oxidizing flame, or the reverse, at any moment, tending to facilitate all metallurgical operations.

7th. The complete consumption of the smoke of soft coal, so that none of it is seen rising from the chimney, rendering this furnace of great value in large manufacturing towns.

Upon this latter point, Sir William Armstrong, in a recent paper before the British Scientific Association, remarks:—"The production of smoke is unnecessary and inexcusable. The Sieman process remedies this waste, and removes a great source of public annoyance."

In these furnaces the heat evolved by combustion is superadded to that previously acquired by the gases. Thus, in addition to the economy, a greater intensity of heat is obtained than is possible by ordinary combustion. In fact, as the heat evolved in the furnace, or so much of it as is not communicated to the bodies exposed to its action, continually returns to augment the new fuel, there appears to be no limit in the temperature attainable, except the power of resistance in the materials of which the furnace is composed.

Professor Faraday, in a recent lecture before the Royal Institute, says:—"The Sieman process is founded on philosophical principles, and is destined to play an important part in all metallurgical operations."

The new process is rapidly coming into use in Europe. It is used in the manufacture of heating gas in Paris, some thirty producers being erected to supply the city. In the zinc and brass works of Germany it is also successfully applied, while in England there is scarcely any branch of iron or steel working in which it has not been thoroughly tested.

The process was first introduced into this country by Park Brothers, extensive manufacturers of steel and sheet copper, at Pittsburg.

In the extensive flint glass works near Park Brothers, Mr. Davis has tested the process for eight months, with the most satisfactory results. The furnaces formerly used about nine tons of the best coal to do work which is now done by about five tons of the poorest coal. The finest quality of glass is made at these works. The manageableness of the heat is shown by the fact that a furnace exposed to a temperature of 4,000, degrees showed no signs of fluxing, the central pillars coming out with every angle as sharp as when the heat was first applied.

SILLIMAN, BENJAMIN, LL.D., an American physicist, born in North Stratford, Connecticut, August 8, 1779, died at New Haven, Connecticut, November 24, 1864. His father, Gold Selleck Silliman, a graduate of Yale College in 1752, was a lawyer of distinction in Fairfield, and during the Revolutionary war a brigadier-general of the State militia. When the British forces invaded the coast at New Haven, burning towns and villages in their progress, the family fled to North Stratford, now Trumbull, where, as has been mentioned, the subject of our sketch was born. Upon the death of his father, a few years after, his education devolved upon the widowed mother, and at thirteen years of age he was fitted for college, graduating at Yale in 1796, among the first in his class. In 1799 he was appointed to a tutorship. It was his intention to enter upon the practice of law, for which he had begun to qualify himself by professional studies; but at the solicitation of Dr. Dwight, he consented to give up his chosen course, and prepare himself for a professorship of Chemistry and Geology. He accordingly passed two years in study at Philadelphia, and

on his return to New Haven in 1804, he delivered his first course of lectures to the students of Yale College. In 1805 he went to Europe in order to profit by the teachings of eminent men in London and Edinburgh, and after an absence of fifteen months he returned to New Haven, and published an account of his journey and residence abroad in two duodecimo volumes. Few American books of travels have ever been so popular as this narrative of his European observations. Not long afterward he made a geological survey of part of his native State, which is believed to have been the first in a series of scientific explorations now widely extended through America.

In 1818, Professor Silliman founded the "American Journal of Science and Arts," with which his name is still connected. This Journal, now in its eighty-eighth volume, a survivor of most of its contemporaries, has been recognized at home and abroad for nearly fifty years as the chief repository of American Science. Its publication called for incessant labor, as well as for heavy and unrequited outlays upon the part of the editor; but its acknowledged services in the advancement and diffusion of scientific learning, entitle its founder to the honorable remembrance of every scholar.

In 1807 Professor Silliman made a chemical analysis of a meteorite of great size and brilliancy which had burst in the town of Weston, Conn. He afterward assisted Dr. Hare in his experiments with the oxy-hydrogen blowpipe, and gave it the name of "compound blowpipe," by which it is commonly known. This invention he applied to the fusion of a variety of bodies before regarded as infusible. In 1833, during the progress of some investigations connected with the galvanic battery, he first established the fact of the transfer of particles of carbon from the positive to the negative pole, and the retransfer when the points are shifted. Professor Silliman was probably the first in America to lecture before a miscellaneous audience on scientific subjects. While discharging his continuous duties as a college instructor and as editor of a scientific journal, he was frequently invited to give public lectures on Chemistry and Geology, and much of the interest now manifested in those departments of science may be traced to his influence. In Boston, New York, Philadelphia, Washington, New Orleans, St. Louis, and other large cities, he repeatedly delivered a series of popular discourses, while his more scientific lectures at New Haven have attracted young men from every part of the United States. Among the services which he rendered at once to science and to his alma mater, was the acquisition, by purchase, of the Gibbs Cabinet, then altogether the best collection of minerals in the country, which by subsequent enlargement through his energetic efforts, stands a memorial for him through all time. He found great pleasure in helping forward other men of science, his house and his laboratory always being open to receive them, and

He was ever ready to further the advancement of scientific investigations in every part of the country, his long labors bringing him honor from all parts of the world. His name is on the roll of most of the principal scientific societies of Europe as well as those in his own country. In lecturing, his language was simple, his flow of words easy, his style animated, abounding in life-like and well-adorned description, often eloquent, and sometimes varied with anecdote, running occasionally into wide digressions—his noble countenance and commanding figure often calling forth the applause of his audience as he passed through the lecture hall. He was a sincere believer in the sacred Scriptures, and in his lectures upon geology aided greatly in removing from the religious world the apprehension that science and religion were hostile in their teachings.

In 1853 Professor Silliman resigned his position in Yale College, and was elected Emeritus Professor; but at the request of his colleagues he continued to lecture on Geology until June, 1855, when he gave his closing academic course. In 1851 he again visited Europe, after a lapse of nearly half a century, travelling for the first time through France, Switzerland, Italy, and Sicily, an account of which visit appeared in 1858.

After his retirement from academic labors, his time was for the most part passed in home enjoyments, his health and vigor continuing to a good degree unimpaired. Blending with and ennobling all his virtues, was the child-like simplicity of his Christian character, shedding a lustre over the evening of his happy and honorable life. For a few days previous to his death he had been indisposed, though with no alarming symptoms; but after a night of refreshing rest, he offered his morning sacrifice of praise and thanksgiving, and in a moment was gone. Professor Silliman's scientific publications, aside from the contributions to his journal, were chiefly text-books. He edited Henry's Chemistry and Bakewell's Geology, for the use of his pupils, and in 1880 published a Chemistry, in two volumes.

SINCLAIR, CATHARINE, a Scottish authoress, born in Edinburgh April 17, 1800, died at Kensington, London, Aug. 6th, 1864. She was the daughter of Sir John Sinclair, and was early distinguished both for literary talent and benevolence. During the latter part of her father's life she acted as his secretary, and her career as an authoress commenced about the time of his death in 1855, when she published two volumes, entitled "Modern Accomplishments" and "Modern Society." The popularity of these works is evidenced by the fact that thirty thousand of them have been sold in England. Since then she has given to the press a number of other successful productions, among which are "Cross Purposes," "Hill and Valley," "The Journey of Life," "The Business of Life," "The Mysterious Marriage," "Modern Flirtations," "Lord and Lady Harcourt," and "Beatrice." In all her works, her representations of char-

acter were faithful to the life, having been drawn from personal observation of those around her, and doubtless she had herself taken a leading part in many of the dialogues she has so graphically recorded. Her brother, Capt. Sinclair, used to say that he was the naughty boy who did all the mischief in her "Holiday House." Her works have all been republished in this country, and with great success. She contributed to many charitable objects, but took special pleasure in works of public utility. She established a mission station near Edinburgh, and maintained a large industrial school to prepare girls for domestic service; took measures to improve not only the condition of the poor and the aged, but also to cultivate the literary tastes of the higher classes. She also induced a number of young artisans to form themselves into a volunteer corps, providing at her own expense a handsome uniform, a drill sergeant, and a band of music. Of late years her attention has been occupied by the superintendence of a charitable institution for widows of officers of the army. At her funeral many hundreds of the working classes lined the streets, and her own company of volunteers were present to show respect for their worthy benefactress.

SMITH, HON. CALEB BLOOD, Judge of the United States District Court, and ex-Secretary of the Interior; born in Boston, Mass., April 16, 1808; died at Indianapolis, Indiana, Jan. 7, 1864. When about six years of age, his parents removed to Cincinnati, in which city, and in Miami University, Oxford, Ohio, he received his education. He studied law at Cincinnati and Connersville, Indiana; where, in 1828, he was admitted to the bar and entered upon the practice of his profession. In 1832 he established and edited a Whig journal called the "Indiana Sentinel;" in 1833 he was elected a member of the Indiana Legislature, and reelected until 1836, when he officiated as speaker; in 1847 and 1848 he was a member of the Board of Fund Commissioners, and a Representative in Congress from 1848 to 1849, and subsequently was on the commission with Messrs. Corwin and Payne, under the Mexican treaty. About 1850 he became interested in the Junction Railroad Company, was elected its President, and removed to Cincinnati to discharge the duties of that position and to pursue his profession. In 1856 he was one of the presidential electors on the Republican ticket in Ohio, having been connected with the Republican party from its organization. In 1858 he removed to Indianapolis, where he remained until he received the appointment of Secretary of the Interior from President Lincoln, in 1861. He was also a member of the Peace Congress in Washington, February, 1861. In December, 1862, he resigned the office of Secretary, and was appointed Judge of the U. S. District Court for Indiana. Judge Smith had been somewhat indisposed for some months, but had attended to his duties up to the day of his death, which

occurred suddenly from a severe attack of hemorrhage.

SMITH, THOMAS MATHER, D.D., president and professor in Kenyon College, born in 1797, died in Portland, Maine, Sept. 6, 1864. He was a son of the Rev. Daniel Smith, for half a century pastor of the Congregational Church in Stamford, Conn., and graduated at Yale College in 1816, and at Andover Seminary in 1820. In 1822 he was ordained to the Congregational ministry in Portland, and the same year was married to the eldest daughter of the Rev. Leonard Woods, D.D., Abbott Professor of Christian Theology at Andover. A failure of health, after a few years, required his removal from Portland. Subsequently he was called successively to the charge of parishes in Fall River, Catakill, N. Y., and New Bedford. Dissatisfied with the Congregational system, he applied for Holy Orders in the Episcopal Church. He was ordained at New Bedford by the Right Rev. Benj. Bosworth Smith, D.D., Bishop of Kentucky, the Bishop of Massachusetts being prevented from officiating by a sudden illness. After receiving Priests' Orders from the hands of Bishop Eastburn, he entered upon his duties as Milnor Professor of Systematic Divinity at Gambier, to which post he had been appointed and for which he was peculiarly fitted. In this important department of duty he continued for eighteen years, during four of which he was also President of Kenyon College. In both capacities he displayed distinguished merit, adding to mature and finished scholarship unusual prudence, thorough application, and marked executive ability. On his resignation of the Milnor Professorship in December, 1863, the Trustees of the Theological Seminary unanimously appointed him Emeritus Professor, a tribute of respect most fitting and appropriate.

SOUTH CAROLINA. The movements of the war left the State of South Carolina comparatively undisturbed during 1864. The Federal fleet occupied the entrance to the harbor of Charleston. Morris Island was also held, and an artillery fire was directed at intervals against Fort Sumter and the city of Charleston. Hilton Head was also occupied by troops, and Port Royal preserved as the base of Federal military operations on the coast of the State. Some skirmishes took place between the hostile troops, and some expeditions were made by bodies of the Federal troops, but the results, excepting so far as related under the title of **ARMY OPERATIONS**, were unimportant. The lower part of the city of Charleston suffered much injury from the shells thrown into it by the distant Federal guns. Some of the effects of the shells are thus described by a visitor:

We visited the old office of the "Mercury," in Broad street. A message sent by the "Marsh Angel" had preceded us, entering the roof, passing into the chimney, and exploding within, dumping several card loads of brick bats, mortar, and soot into the editorial room, smashing all the windows, and splintering the doors.

The "Courier," in Bay street, had not escaped

damage. A shell went through the roof, tearing down through the floors, ripping up the boards, breaking the timbers, jarring the plaster from the walls, exploding in the second story, rattling all the tiles from the roof, bursting out the windows, smashing the composing stone, opening the whole building to the sun-light. Another shell had dashed the sidewalk to pieces and blown a passage into the cellar wide enough to admit a six horse wagon. Near the "Courier" office was the Union Bank, Farmers and Exchange Bank, and Charleston Bank. They were costly buildings, fitted up with marble mantels, floors of terra cotta tiles, counters elaborate in carved work, and with gorgeous frescoing on the walls. The rooms are silent now. The oaken doors splintered, the frescoing washed from the walls by the rains which drip from the shattered roof, the decks are kindling wood, the cornice-work has dropped from the ceiling to the ground, the tiles are ploughed up, the marble mantels shivered, the beautiful plate-glass of the windows lies in a million fragments upon the floor. In short the banks have broke! They helped on the rebellion—contributed of their funds to inaugurate it, and invested largely in the State stock to place the State on a war footing. By a document which has fallen into my hands and which lies before me, I notice that the three banks already named held on January 6, 1862, six hundred and ten thousand dollars' worth of the seven per cent. State stock, issued under the act of December, 1861.

Passing from the banks to the hotel I found a like scene of destruction. The door of the Mills house was open. The windows had lost their glazing and were boarded up. Sixteen shots have struck the building. The Charleston Hotel has several great holes in the walls.

The churches have not escaped. St. Michael's, the oldest of all, has been repeatedly struck. The pavement is thick with broken glass which has been rattled from the windows by the explosions of the shells. All the churches in the lower portions of the city are wrecks.

In that corner of the State occupied by Federal troops, of which Beaufort is the principal place, apart from the military and naval headquarters, a mass State Convention was held on Tuesday, April 17. The call for the Convention invited the people of the State "without distinction of color" to participate in the election of delegates to the Baltimore Presidential Convention. About one hundred and fifty colored persons, and two-thirds as many whites, assembled and selected twelve whites and four Africans as delegates. A series of resolutions was also adopted. These delegates, however, although admitted to seats, were not allowed to take an active part in the proceedings of the Convention.

The secession State Government held the control of almost all the State, and continued in undisturbed operation through the year. The Legislature, when in session, adopted resolutions expressive of its unshaken purpose to secure independence and separation from the Northern States, and declaring the importance of restraining the Richmond Government strictly within the exercise of powers delegated to it in its Constitution. On the subject of peace the views expressed by Gov. Bonham, in his message to the Legislature, prevailed, as follows:

Those in whom the treaty-making power of the Confederate Government resides have done all they

san, with propriety, to show the North and the world that we are desirous of peace. The President of the United States, on the other hand, has repeatedly declared that there can be no peace without submission on our part, and reconstruction. A people who, under such circumstances, could be induced to persist in efforts to obtain peace, outside of the constitutional mode, are already subjugated. Such a course, with the blood of their sons and brothers still moist on their soil, the wrongs of their outraged women still unavenged, the ruins of their residences and granaries still smoking, would be unbecoming the great Confederate people, who, four years since, with so much unanimity and enthusiasm, resolved to maintain at every cost their right to abolish the former government "and to establish a new government, laying its foundation on such principles, and organizing its powers in such form, as to them shall seem most likely to effect their safety and happiness." We can obtain no peace that would not degrade us, except such as we shall secure by the defeat of our enemies.

On Dec. 19th new State officers were inaugurated, viz.: A. G. Magrath as Governor, and H. R. McGaw as Lieut.-Governor. In his inaugural the Governor thus endeavors to arouse the energies of the people:

While I would stimulate into activity all the resources we may have, and prepare for the maintenance of those rights to which we are entitled, I have the utmost confidence that in this we shall surely pave the way to that peace which we all so much desire, and which our enemies have hitherto denied us. I have no hope in their forbearance; for I have no belief in their humanity. I have no reliance in their moderation; for I have no faith in their justice. When their hope of success shall fade away, and that it will do when they realize the unalterable purpose by which we are animated, then will they think of peace. And that peace only will be lasting which rests upon the conviction of our strength; as that peace only can be honorable which involves the admission of our independence. Let not the apprehension that we are exhausted find place in our minds, or its poison sicken our hearts. What people have ever struggled for more than the boon we seek to secure? What people, even amid the proud list of European dynasties, could have sustained for four years such a war as that waged upon us (and at the close of that period have still maintained in the field an army, in numbers, in confidence, and in discipline, equal to that which rallies under our banners). Other nations, for lesser purposes, have striven longer, endured more than we have, and won for themselves imperishable honor. Let us not hesitate in our purpose or falter in its execution.

With a voting population of forty-seven thousand the State furnished to the rebel army sixty-five thousand men. Of all the persons who might have claimed exemption from military service, less than one hundred were within the limits of the State. Notwithstanding the defiant spirit shown by the Governors, the State was regarded as too thoroughly exhausted to permit another man to be taken from her agricultural or mechanical interests.

SPAIN. A Kingdom in Southern Europe. The present queen, Isabella II., born October 10th, 1830, the eldest daughter of King Fernando VII., succeeded her father on September 29th, 1833, declared of age by the Cortes November 8th, 1843. Her eldest son and heir to be throne is Alfonso, Prince of Asturias, born

VOL. IV.—48 A

November 28th, 1857. The last general census, taken May 21st, 1857, stated the area and total population of the kingdom as follows:

	Area of English square miles.	Population.
Continent of Spain.....	177,781	15,907,753
Balearic Islands.....	1,707	268,903
Canary Islands.....	8,290	227,146
	182,758	16,801,851

The budget of the year 1862, and the first six months of the year 1863,* makes the following estimate of the public receipts and expenditures:

<i>Expenditures.</i>		Reals.†
ORDINARY:		
Royal household.....		74,025,000
Cortes.....		6,282,478
Public debt.....		575,985,918
Indemnities.....		21,915,542
Pensions.....		291,405,251
President of the Council.....		654,000
Statistics.....		14,133,697
Foreign Affairs.....		24,194,816
Justice.....		43,482,985
Public worship.....		285,294,370
War.....		570,944,372
Navy.....		176,550,153
Interior.....		158,078,404
Public works.....		143,157,312
Finances.....		702,525,000
Total ordinary expenditures.....		2,997,710,266
Extraordinary.....		568,936,733
Total of expenditures.....		3,566,697,001

<i>Receipts.</i>		
ORDINARY:		
Direct taxes.....		784,805,000
Indirect taxes.....		755,290,500
Stamps, State monopolies (salt, tobacco).....		1,158,264,000
Surplus of Colonial chests.....		175,500,000
		2,873,859,500
Extraordinary (sales of national property).....		556,498,166
		3,430,357,666
Deficit.....		126,347,335

The public debt, on December 1st, 1862, amounted to 15,066,675,135 reals (the annual interest to 389,994,360 reals).

The Spanish Army, according to the "Almanach de Gotha" for 1864, consisted, in 1863, of 8 captain-generals, 50 lieutenant-generals, 110 major-generals, 812 brigadier-generals, 9,203 officers, and 286,801 privates; besides a number of regiments in Cuba, Porto Rico, San Domingo, and the Philippines.

The Spanish fleet, according to the same authority, was, in 1862, composed as follows:

<i>Sailing Vessels.</i>		
2 ships of the line, carrying each.....	84	Guns.
8 frigates.....	from 32 to 43	"
4 corvettes.....	" 16 to 32	"
8 brigs.....	" 12 to 18	"
1 schooner.....	" 6	"
10 schooners.....	" 1 to 7	"
6 feluccas.....	" 1 to 4	"
10 transports.....	" 5	"
44 sailing vessels.....		

* The receipts for the year 1863 alone were estimated at 2,081,569,000, and the expenditures at 2,021,185,380 reals.

† One hundred reals are equal to \$4.98; one real, therefore, is about equal to five cents. The figures above may therefore, be converted into American money by dividing them by twenty.

<i>Steamers.</i>

5	frigates, " " " " " "	51	"
11	schooners, " " " " " "	2	"
6	gunboats, " " " " " "	2	"

The *personnel* of the marine was 1,121 officers, 189 accountants, 128 mechanics, 13,750 sailors, 8,200 marine soldiers, and 589 guards of arsenals.

The imports in 1860 amounted to 1,488,818,498 reals, the exports to 1,098,208,445 reals. The arrivals in Spanish ports were, in 1860, 10,127 vessels, with an aggregate tonnage of 1,351,988; the departures, 9,097 vessels, with an aggregate tonnage of 1,244,520. But this did not include the coasting trade, in which the arrivals were 48,932 vessels, with a tonnage of 1,895,721; and the departures, 48,812, with a tonnage of 1,879,827.

In March the Spanish Government became involved in a serious difficulty with Peru; for the history of which see PERU.

The war of Spain against the people of San Domingo took a turn very unfavorable to the Spaniards. Not only were her troops swept away by the murderous climate and the bravery of the Dominicans, but the financial embarrassment of the Spanish Government became so great, that Gen. Narvaez, who had been charged by the Queen with forming a new ministry, declared, in union with all his colleagues, that San Domingo must be given up, and insisted that this must be announced in the Queen's speech on opening the Cortes. The Queen stood out against this decision, and the new ministers resigned in a body; but the attempt to form a new ministry which would propose the continuance of the war against San Domingo failed, and the Queen had to yield to the demand of Narvaez. The Queen's speech was silent on the Dominican question; but a few days after the opening of the Cortes the ministry brought in the following address:

To the Cortes:

In the old Spanish island, the first land of the Western world, which the great Christopher Columbus considered worthy of an important establishment, in that great Antilles where many years after its separation from the metropolis not a drop of Spanish blood was shed, now flows that generous blood, and the rigors of a pestiferous climate aiding the enemy make terrible ravages in the ranks of our valiant soldiers.

This sanguinary struggle, which is also attended by the disadvantage of uselessly and profitlessly expending the public treasure and consuming the abundant products of our colonial possessions, was not provoked by the attempts of anterior Cabinets to carry out an ambitious war of conquest, so opposed to the rational, just, pacific, and disinterested policy so long observed by Spain. Neither did it originate from the necessity of repelling foreign aggressions, of opposing force to force at any cost, considering only the defence of insulted honor; such was not the case; this cruel struggle commenced the day following that on which Her Majesty's Government of that day believed that all the inhabitants of the Dominican Republic asked and solicited with impatient desire to be reincorporated with the Spanish nation, their ancient mother, and to form one of its provinces, aspiring to the happiness enjoyed by those of Cuba and Puerto Rico.

Such a desire might not be certain, but it was very probable. The Government, actuated by these sentiments, had faith in that which appeared to inspire the Dominicans, and therefore accepted their votes, and counselled Her Majesty to effect the annexation which this State professed so ardently to desire.

On this account the Ministers, in a solemn document, described this event as auspicious, highly honorable for Spain, and one not often encountered in the annals of peoples. For this, also, after referring to the lamentable history of San Domingo since the proclamation of its independence in 1821, following the example of other provinces of the American continent—after drawing the sad picture of such prolonged misfortune, of a state of things in which the sources of public and private wealth were exhausted, independence completely lost for want of strength to maintain it, liberty no less lost through the insecurity felt by the citizens and the continual agitations of the republic—the Ministers invoked every sentiment of justice, humanity, and honor in counselling the annexation of this unhappy island. They believed such a measure was all the more desirable, considering the circumstances and character of its inhabitants, the fertility of its soil, and the strong attachment which the people, after past excesses, whereby they had been terribly disabused, professed toward their ancient metropolis.

The annexation was thus founded upon two most noble, just, and weighty reasons. The first was the right inherent in the unanimous will of a people, a right not disputed, and previously affirmed by the general assent of the nations of Europe and America in a recent case. The second was the duty of humanity, of compassion toward the unfortunate people who sought favor and mercy, overwhelmed as they were by a sea of disasters and misfortune. No other right supported nor supports the Spanish Government in holding the Spanish portion of the island of San Domingo; neither the right of revindication nor the right of conquest, both being opposed to the policy of the Government, the interests of the people, and the friendly relations which Spain has always endeavored to maintain with the independent States of America, which once formed part of the immense territory protected by the tutelary mantle of the Kings of Spain.

But such flattering hopes soon disappeared; fatal symptoms very soon manifested themselves that the annexation had not that spontaneous and unanimous support upon which it was based. Nevertheless, it was the duty of the Government to ascertain with certainty whether those violent protests, several times repeated, did not proceed only from a discontented few, but were the expression of the feelings of a people who rejected the legitimate power they had invoked in a time of trouble and distress. The agitation increased and gained towns and frontiers, extending over the whole of the territory, and at this day the Spanish portion of the island of San Domin-

go presents to the civilized world the spectacle of an entire people in arms ungratefully resisting as tyrants those whom they called in as preservers.

So strange a political phenomenon has been examined by the Ministers undersigned with delicate attention and deep study. They have thoroughly sifted the sad history of the annexation of San Domingo, and have considered the question from every point of view imaginable, commencing by those of justice and right, and last regarding those of expediency. They have well taken into account the reasons that might be alleged on the ground of the national honor and respect, and have considered the event of the most brilliant future possible a triumph obtained at the cost of immense sacrifices; they have weighed the arguments for and against that may be based upon considerations of national and foreign policy, and, finally, have carefully made the sad calculation of the numerous and precious lives that Spain loses every day that this sterile contest is prolonged, and of the great amount of treasure it consumes.

As a result of this laborious examination, the Ministers are impressed with the conviction that the question of San Domingo has reached a point which will allow us to make the following deductions:

That it was a delusion to believe that the Dominican people, as a whole, or in the great majority, desired, and, above all, demanded their annexation to Spain. That the struggle having become general, it does not now bear the character of a measure taken to subject a few discontented rebels, but of a war of conquest completely foreign to the spirit of Spanish policy. That even by concentrating our efforts and sacrifices in order to obtain a triumph we should place ourselves in the sad position of holding the island entirely by military occupation, full of difficulties and not exempt from dangerous complications; that even under the most favorable hypothesis that a portion of the population may show themselves devoted to us after victory, the Governmental system that would have to be established in those dominions must either be little suitable to the usages and customs of the inhabitants, or very dissimilar to that of the other colonial provinces.

Upon all these and other considerations which the superior intelligence of the Cortes will supply, the Ministers, anxious to put an end to the useless sacrifices in men and money which the war in San Domingo imposes upon the nation, have the honor to propose—being duly authorized by Her Majesty—the following project of law:

Art. 1. The royal decree of the 19th of May, 1861, declaring the territory of the Dominican Republic reincorporated with the monarchy, is repealed.

Art. 2. The Government is authorized to take the necessary measures for the execution of this law, giving account of the same to the Cortes.

Duke of VALENCIA, President of the Council.
ANTONIO BENAVIDES, Minister for Foreign Affairs.

LORENZO ARRAZOLA, Minister of Grace and Justice.

BARZANALLANA, Minister of Finance.

CORDOVA, Minister of War.

ARMERO, Minister of Marine.

LUIS GONZALES BRAVO, Minister of the Interior.

GALLANO, Minister of Public Works.

SEIJAS LÓZANO, Minister of the Colonies.

The action of the Cortes on this bill belongs to the history of 1865, and will be referred to in the next volume of the *ANNUAL CYCLOPEDIA*.

When San Domingo shall be abandoned, Spain will only own, in America, Cuba, Porto Rico, and a small group of islands called the Spanish Virgin Islands. According to the last census taken in Cuba, the white population of

that island amounts to 798,484 souls. The colored population nearly reaches this figure, numbering no less than 603,046. But of this number no less than two-fifths (225,848) are already free. For the education of the negroes little is done, and there were only 13,319 males, and 13,461 females, who were able to read and write. Compared with the total population, the slaves form about 25 per cent.—about the same proportion which the slave population of Arkansas and Tennessee held to the free population of those States.

In Porto Rico, which, in a total population of 583,808, has 239,527 persons of color, the condition of the negro and the prospect of the abolition of slavery are much better than in Cuba. No slaves have been introduced there from Africa for about thirty years, and the number has dwindled down to 41,786, in a population of 583,808. They have many privileges, and among them the right to purchase their own freedom. In no country on this side of the Atlantic does the institution approach so nearly a patriarchal system. The slaves have free access to the tribunals to state their grievances; their evidence is taken in court, even against their master, and it has as much weight as that of white persons of the same intelligence. They have the privilege of changing their masters when dissatisfied, and can oblige them to accept payment for their manumission when the minimum price of their assessed value is offered. The child of a slave mother and white father is free from its birth; and in very many cases, when the mother is a deserving woman, her freedom is given her. A society for abolishing slavery in these colonies was established at Madrid, and joined by prominent men of all political parties.

SPEKE, Captain JOHN HANNING, the discoverer of the source of the Nile, born at Jordans, Somersetshire, England, in 1827, killed by the accidental discharge of his gun while hunting, near Bath, England, Sept. 15, 1864. After receiving his education at a provincial grammar school, he entered the army at the age of seventeen, and was soon ordered to India, where, as a subaltern officer, he made the campaign of the Punjab under Lord Gough, and took part in the victories of Ramnuggur, Sadoolapore, Chillianwallah, and Guzerat. His regiment during this period was attached to Sir Colin Campbell's division. He found opportunity while in India to gratify not only his warlike ardor and love of adventure, but also the fondness for field-sports which had distinguished him from boyhood. The frequent leaves of absence with which he was favored, by way of reward for his military services, were spent in hunting, botanizing, and collecting geological specimens among the Himalayas, or in the unexplored regions of Thibet. His object in these excursions was two-fold: first, he was ambitious of completing and developing a museum of natural history, which he had begun to collect at his father's house at Jordans; and, secondly

he was trying to save money enough to enable him to make a long exploration of the valley of the Nile during the three years' furlough to which he would be entitled as soon as he had served ten years in India; and he found that life in the jungles and the backwoods was much cheaper than life in the cantonments. In September, 1854, he received his furlough and set out for Aden, in Arabia, intending thence to cross the Gulf of Aden into the territory of the Somalia, reputed one of the most savage of all the African tribes. Here, however, at the suggestion of Sir James Outram, he was induced to join the expedition which was about starting for the same region under Lieut. Richard F. Burton. While waiting for this expedition to move, he made an excursion of three months in Arab disguise into the Somali country, without white companions. On April 7, 1855, the expedition rendezvoused at Berbera, on the African shore of the Gulf of Aden. Lieutenant Burton assumed command; Lieutenants Stroyan and Herne took charge of the principal scientific duties; and Speke, to use his own words, was "a Jack-of-all-trades, assisting everybody, looking after the interests of the men, portioning out their rations, setting the guards, and collecting specimens of natural history in all its branches." At the very outset of the journey they were attacked by the savages; Lieutenant Stroyan was killed; Speke was seriously and the others slightly wounded, and after making their escape with difficulty they returned to Aden. By his physician's order Speke now returned to England, having nothing to show, said he, after this signal failure, "but eleven artificial holes in my body." On reaching home he found the country engaged in the Russian war. He went to the Crimea, as a volunteer in the Turkish contingent, with the rank of captain, served through the campaign, and on the conclusion of peace projected an excursion to the Caucasus, to examine the fauna of that region. He gave up this plan, however, on receiving from Captain Burton an invitation to join him in another African journey. Their steps on this occasion were to be turned toward the great lake-regions of Central Africa, of which the most enticing reports, gathered from the natives by Drs. Krapf and Rebmman, had reached England. The history of this trip is given in Captain Burton's "Lake-Regions of Central Africa" (1860). Starting about mid-summer, 1857, from the mission-house of Rabbai Alpia, on the Eastern coast, opposite the island of Mombas, they proceeded inland, discovered Lake Tanganyika, and separated at Kazeh, whence Captain Speke, following the route indicated by some native traders, reached Lake Nyanza, which he then suspected and afterward proved to be the source of the Nile. The important geographical results of this expedition were mainly due to Speke, his companion applying himself mainly to the history, languages, and peculiarities of the people.

Captain Speke returned to England in 1859,

and immediately prepared for his last expedition, of which he has given an account in his "Journal of the Discovery of the Sources of the Nile" (1864). His companion on this occasion was Captain Grant. They left the Eastern coast of Africa, Oct. 2, 1860, intending to make at once for Lake Nyanza, and trace downward to Egypt that outlet which they believed to be the source of the Nile. They were not heard of for nearly two years and a half. On Feb. 15, 1863, they were encountered at Gondokoro, on the Nile, by Mr. Baker, who had gone up the river in the hope of hearing news of them. They had reached the western side of the lake about a year after the time at which they started, and remained there until Aug. 1863. Owing to the vexatious delays interposed by petty kings on the bank of the river, they were six months making their way from the lake to Gondokoro. They had reached this point by following the course of the stream, with the exception of avoiding a few bends by land-travelling. On his return home he was received with the most flattering demonstrations of welcome. He received the medal of the Royal Geographical Society and a gold medal from the King of Italy, and his merits were recognized in Parliament by Lord Palmerston. In September, 1864, he went to Bath to attend the meeting of the British Association, where it was expected that some controversy would take place between him and his former companion, Burton, growing out of a difference of opinion respecting their discoveries in Africa. Captain Speke published an account of his first and second African journeys in "Blackwood's Magazine" in 1859-'60, and a volume entitled, "What led to the Discovery of the Source of the Nile."

STRUVE, FRIEDRICH GEORG WILHELM VON, a Russian astronomer, born in Altona, April 15, 1798, died at Pulkowa, near St. Petersburg, Nov. 23, 1864. In 1818 he entered the University of Dorpat, in the government of Livonia, where he devoted his attention to philology and astronomy, and in 1817 became director of the observatory in that city. After rendering the name of Dorpat illustrious in the annals of astronomy, a wider sphere of usefulness was opened before him by the Emperor of Russia. An observatory at Pulkowa was projected, and Struve was the master-spirit which superintended its erection, and so perfect are all the arrangements that it will serve as a model for all time. The work done at Pulkowa principally relates to sidereal astronomy, and each contribution to science which emanated from that observatory was the result of twenty-five years of arduous study on his part. Besides the observations and reductions of northern stars, determinations of the parallaxes of 1830, observations of comets, nebulae, and Saturn's ring, &c., were undertaken, and a large amount of geographical work. One of the last important acts of M. Struve was to visit the Crown ministers and the Superintendents of Surveys

in the principal States of Europe, in order to establish a national confederation for effecting the measure of an arc of parallel from Orsk, on the river Oural, to Valentia, in the west of Ireland, a measure which has now made considerable progress. The name of Struve is associated with all the great works of triangulation and geodesy carried out in Russia and Eastern Europe. His most important works are "Observations at Dorpat," 8 vols., Dorpat, 1817-'89; "New Catalogue of Double Stars," Dorpat, 1827; "On the Micrometrical Measurement of Double Stars," St. Petersburg, 1827; "Studies in Stellar Astronomy upon the Milky Way, and the Distance of the Fixed Stars," St. Petersburg, 1847; "Medial Positions of the Double and Multiple Fixed Stars for the Epoch 1880," St. Petersburg, 1852.

STUART, JAMES E. B., a major-general in the Confederate service, born in Patrick Co., Va., about 1832, died in Richmond, June 11th, 1864. He was graduated at West Point in 1854, commissioned a cavalry officer, and after reaching the rank of first lieutenant, resigned May 14, 1861. He had previously seen considerable active service in the Indian country, and was known as a fearless rider and brave soldier. He immediately entered the Confederate army, commanded the cavalry at the battle of Bull Run, was promoted a brigadier-general in Sept. 1861, and in the ensuing winter organized the cavalry forces of the enemy in Virginia. He first brought himself conspicuously into notice by his celebrated raid in the rear of Gen. McClellan's communications near Richmond, on June 18th

and 14th, 1862, which was the immediate precursor and cause of the change of base soon after commenced by the Federal army, and also of the seven days' fighting. During the advance of Gen. Lee toward Maryland in the succeeding August he made a night attack, in the midst of a terrific thunder-storm, on Gen. Pope's headquarters, capturing many private papers and plans of campaign; and in October, a few weeks after the battle of Antietam, at the head of two thousand cavalry and four pieces of flying artillery, he crossed the Potomac between Williamsport and Hancock, and passing through Mercersburg and Chambersburg, rode completely round the Union lines, and recrossed the river into Virginia with the loss of but one man. This raid, though of little advantage beyond the capture of several hundred horses and the destruction of a few thousand dollars' worth of stores, was the most daring movement of the kind hitherto attempted during the war, and greatly enhanced Gen. Stuart's reputation as a cavalry officer. It was his last great success. At Beverly ford in Virginia, and in Maryland and Pennsylvania, during the Gettysburg campaign, he was invariably worsted in his encounters with the Federal cavalry. He, however, rendered efficient service in protecting the retreat of Lee's army after the battle of Gettysburg. He was mortally wounded in an encounter with Gen. Sheridan's cavalry at Yellow Tavern, near Richmond, while endeavoring to cover that city against Federal raids, and died a day or two afterwards.

T

TALLMADGE, HON. NATHANIEL P., born in Otham, Columbia Co., N. Y., February 8, 1795, died at Battle Creek, Michigan, Nov. 2, 1864. He graduated at Union College; studied law, and was admitted to the bar in 1818; was a member of the Assembly of New York in 1828; of the State Senate, from 1830 to 1833; a Senator in Congress from that State from 1833 to 1844; and was subsequently appointed, by President Tyler, Territorial Governor of Wisconsin. Some years since he removed to Battle Creek, Michigan, where he resided at the time of his death.

TANEY, ROGER BROOKE, Chief Justice of the United States, born in Calvert County, Maryland, March 17th, 1777, died in Washington, D. C., October 12th, 1864. He was graduated at Dickinson College, Carlisle, Pa., in 1795, admitted in 1799 to the bar of his native county, from which he was elected a delegate to the General Assembly, and in 1801 removed his place of residence to Frederick. In 1822 he removed to Baltimore having previously served as Senator in the Legislature of the State during a term of four years. He was

appointed Attorney-General of Maryland in 1827, and in 1831 was appointed Attorney-General of the United States by President Jackson. During the contest of the Administration with the Bank of the United States, upon the dismissal of Mr. Duane from the office of Secretary of Treasury, September 28, 1833, on account of his refusal to remove the deposits, Mr. Taney was appointed his successor, and immediately ordered the transfer of the deposits to the local banks selected by him as the agents of the Government. The Senate refused to confirm the nomination by a vote of 28 to 18, in June, 1834. In the following year he was nominated by President Jackson as an associate justice of the Supreme Court, but he was virtually rejected by the Senate, which indefinitely postponed the consideration of the subject on the last day of the term. Upon the death of Chief Justice Marshall, he was appointed his successor by President Jackson, and was confirmed by the Senate in March, 1836, that body having changed its political relations. He took his seat upon the Supreme bench in January, 1837, and held the office until the

time of his death. When Mr. Taney became Chief Justice of the Supreme Court he was already considerably past the prime of life; he was fifty-nine years of age. He had been previously a lawyer in good practice and of considerable local repute; originally a Federalist in politics, and at one time of his life the friend of impartial liberty. In defending the Rev. Jacob Gruber from a charge of inciting slaves to disorder in Maryland, in 1818, Mr. Taney used these memorable words: "A hard necessity indeed compels us to endure the evil of slavery for a time. It was imposed upon us by another nation, while yet we were in a state of colonial vassalage. It cannot be easily or suddenly removed. Yet while it continues it is a blot on our national character, and every real lover of freedom confidently hopes that it will be effectually, though it must be gradually, wiped away, and earnestly looks for the means by which this necessary object may be attained. And until it shall be accomplished, until the time shall come when we can point without a blush to the language held in the Declaration of Independence, every friend of humanity will seek to lighten the galling chain of slavery, and better, to the utmost of his power, the wretched condition of the slave."

Judge Taney, though not a man of the same exhaustive learning and comprehensiveness of judgment with his illustrious predecessor, John Marshall, was extensively, and in some directions, profoundly versed in the law. His decisions were for the most part cautious, sensible, and on the whole sound. In his interpretations of the Constitution of the United States—the great crucial test of the wisdom and independence of the Court—he inclined to those middle and moderate opinions which treat the Union not as a consolidated nation on one side, nor as a mere confederation on the other, but as a composite or mixed nation, in which the sovereignty has been divided between the central and the local governments.

In the famous *Dred Scott* case, in which the only legal point involved was a plea to the jurisdiction of the Circuit Court, upon a writ of error to the Supreme Court, the Chief Justice having decided that there was no jurisdiction, proceeded to give an extra-judicial opinion which gave him an unpleasant notoriety, and was repudiated by some of the ablest of the associated justices. It was to the effect that a free negro of the African race whose ancestors were brought into this country and sold as slaves is not and cannot be a "citizen;" that for more than a century previous to the adoption of the Declaration of Independence negroes, whether slaves or free, had been regarded as "beings of an inferior order, and altogether unfit to associate with the white race, either in social or political relations; and so far inferior that they had no rights which the white man was bound to respect;" that *Dred Scott*, a negro slave, who was removed by his master from Missouri to Illinois, lost what-

ever freedom he may have thus acquired by being subsequently removed into the territory of Wisconsin and by his return to the State of Missouri; that the inhibition of slavery in the territories of the United States lying north of the line of thirty-six degrees and thirty minutes, known as the Missouri Compromise, was unconstitutional; that the only two clauses in the Constitution which refer to negroes, treat them as persons whom it is morally lawful to deal in as articles of property; that the citizen of any State may take into a territory of the United States any article of property recognized by the Constitution, or, in other words, carry his slaves thither without molestation to his perfect right of ownership; and that Congress could not exercise any authority whatever over this species of property that it could not constitutionally exercise over other property.

TELEGRAPH, ELECTRIC. In the volumes of this *CYCLOPEDIA* for the years 1861 and 1862, will be found articles in relation to certain great lines of telegraph, including those—recently contemplated or now in prosecution—designed to establish communication between the continents or to complete circuits around the world. Of the great lines alluded to, four now command a large share of interest and attention. These are: 1. The Anglo-Indian telegraph, a southern branch from the European network of lines, which has been very recently completed between Constantinople and Rangoon, through Calcutta, and is intended yet to stretch throughout Farther India to China on the north, and into Australia on the south. 2. The Siberian or Russian Asiatic telegraph, a northern branch from the same European system, already completed from Kazan, in European Russia, to Irkutsk, and thence at least to Kiakhta (a city south of Lake Baikal and on the northern border of Chinese Mongolia), and which, besides throwing off southward several important branches, is designed to extend to the eastern coast of Asia, at the mouth of the Amoor River. 3. The Collins Overland (Americo-Russian) telegraph, designed to connect the entire North American system of lines—as well as, eventually, the South American also—by way of Behring's Strait or the North Pacific, with the great Russian line, at its terminus at the mouth of the Amoor, and thus with the entire telegraph system of the Old World. 4. The Atlantic telegraph, also intended to effect a union of the systems of wires upon the two hemispheres, but by means of a cable from the western coast of Ireland to Newfoundland, and a renewed attempt at the laying down of which is to be made during the summer of 1865. The preparatory work connected with the latter two enterprises is already actively in progress.

The Anglo-Indian Line.—The British Government has sought to gain communication with India by two routes, which, however, would probably coincide through the length of a cable from the Persian Gulf across the head of the Arabian Sea to Hindostan. The first

cable laid down in the Mediterranean, by way of Malta to Alexandria, failed; but a stronger one, with larger conducting wires, has recently been submerged, and with success; by this, telegraphic communication exists to Alexandria, and thence to Suez. From this point a cable was to stretch along the bottom of the Red Sea to Aden, thence along the coast of Arabia to Muscat, and thence across the Arabian Sea; but progress beyond Suez was arrested by failure in laying the Red Sea cable. By the other route, Constantinople being in communication with western Europe, a wire is now extended thence through Turkey, by way of Angora, Sivas, Diarbekir, Mosul, Bagdad, Diwanyeh, and Korneh—the last at the junction of the Euphrates and Tigris in the Shat-el-Arab—and to Bussorah, situated on the river last named, seventy miles above its mouth in the Persian Gulf. From Bussorah a cable is laid by way of the Persian Gulf and across the Arabian Sea to Kurrachee, near the western outlet of the Indus; and thence lines extend to Bombay, Madras, Delhi, Calcutta, and other principal towns of India—through the last named reaching, as already mentioned, to Rangoon. A long delay in the completion of this line arose through difficulties interposed by the Turkish authorities to the erection of the wires between Diwanyeh and Korneh, a distance of one hundred and sixty miles. The first despatch was sent through from Bagdad to Bombay, January 29, 1865; and later, private messages had reached Constantinople from Calcutta in twelve hours, and from Kurrachee in eight and a half hours. From Rangoon it is intended to lay a cable along the coast of the Malay peninsula to Singapore, at its southern extremity, and a cable thence along the coast of Cochin-China and China, to Hong-Kong and Canton. A branch from Singapore is to proceed by alternate cables and land lines along Java, Timor, and other islands, to the northern coast of Australia, probably at the Gulf of Carpentaria, there to connect with the wires of that continent—already in all some one thousand and two hundred miles in length—even Sydney and Melbourne being thus brought within a few hours' distance of all the European capitals. It is now expected that the lines both to Canton and to Australia will be in operation by the close of the year 1867.

The Siberian, or Russian Asiatic Line.—Of this, Kazan in European Russia, previously connected by way of Nijni-Novgorod and Moscow with St. Petersburg, may be considered the starting-point. By the close of the year 1864, this line had been completed by way of Perm, west of the Ural Mountains, and east of them through Ekaterinburg, Omsk, and Tomsk, to Irkutsk, and either the main line or a branch to Kiakhta; while, doubtless, the main line has by the present time been carried far to eastward of this point, along the upper Amoor—its intended course being, according to Commander Cheffkin's statement, through Verchne Udinsk, Ochetah, Habaravka at the mouth of the Usuri

(branch of the Amoor), and Sofinsk, to Nicolavsky, where the great river flows into the Strait of Tartary. It is anticipated that the line will be completed through its entire length during 1867, if not earlier. From Queenstown, on the western coast of Ireland, to Irkutsk, a distance of six thousand five hundred miles, a despatch has been transmitted (in 1864) in two hours' time.

Main Branches of the Siberian Line.—These, as at present contemplated, are to be: 1. A wire from Kazan southwardly through the Astrakhan, Georgian, and Circassian provinces, by Tiflis, to Teheran, the capital of Persia; thence to join the Anglo-Indian line, either at Bagdad, or by continuing through Ispahan and Shiraz, to Bushire on the Persian Gulf. 2. A wire from Omsk through Central Asia, running southeastwardly through Mongolia, entering China at Ili (or Ili), thence to southwest and south through Turkestan, Bokhara, and Balk, to Cabool in Afghanistan, and onward to points in the Punjab at which it also will connect with the Oriental or Indian system of lines. 3. A wire from Irkutsk, which may, however, be said to start at Kiakhta, following thence the route of the tea caravans to the Chinese-wall gate at Yehol, and thence to Peking. A company of American citizens, resident in China, and chartered in 1864 by the New York Legislature, under the name of the East India Telegraph Company, proposes to unite the great northern and southern lines again by supplying the link here needful; that is, by extending a line from Canton and Hong-Kong, with the necessary branches for the ports of Amoy, Shanghai, and Nankin, to Peking. From this extension also it is designed to reach Australia by another route—carrying a wire (alternately land and submarine) from a point on the mainland opposite the island of Formosa, across that island, thence by way of Manilla across Luzon and the other islands of the Philippine group, thence by New Guinea, to cross Torres' Strait to Cape York on the northern Australian coast. 4. A wire from the confluence of the Usuri with the Amoor—a point seven hundred miles above the mouth of the latter, thence southward along the Usuri to Lake Kingka, and to the port of Vladi Vostok, opposite that of Hakodadi (on Yesso), and which is to be the Russian naval station on the Pacific. 5. A wire, submarine and land, from the mouth of the Amoor, crossing the Strait of Tartary, Saghalien Island, the Strait of La Perouse, Yesso—through Hakodadi—and the Strait of Sangar, to Jeddo, the capital of Japan.

The Collins Overland Line.—This important line was projected by Mr. Perry McDonough Collins, of California, who has been since 1856 commercial agent of the United States Government for the region of the Amoor River. Major Collins explored, in 1857, the country lying along that river, extending his journey to Petropaulovsky, in Kamtschatka, about one thousand miles east from its mouth, and across

the Sea of Okhotsk. May 23, 1863, he obtained from the Russian Government an authorization of the proposed line through its territory on both sides of the Pacific, a distance of about 5,000 miles, with a grant of the exclusive right to maintain such line for thirty-three years; and February 9, 1864, a similar authorization and grant from the British Government for the continuation of such line through British Columbia to the northern frontier of the United States, a distance of about five hundred miles. A third memorial of Mr. Collins on the subject to the United States Congress was presented in the Senate, April 12, 1864, by the Hon. Z. Chandler, chairman of the Committee of Commerce of that body; and to this the Hon. William H. Seward, Secretary of State, replied in an elaborate and instructive paper, in which, discussing the questions of the feasibility of the proposed line, its utility, and its claim to Government patronage, he is led upon all these points to decidedly affirmative conclusions. He states, among other particulars, that the length of the line would be about six thousand and forty miles; that the highest elevation on the whole line, occurring in the Rocky Mountains within the United States, is not so great as that of the Sierra Nevada where crossed by the Pacific Telegraph; and that the line between St. Petersburg and Archangel on the White Sea, as well as that around the Gulf of Bothnia, both of which reach latitudes as high as any part of the proposed line would do, are maintained in operation without difficulty. The length of cable required at Behring's Strait would be about forty miles. The waters are about one hundred and eighty feet deep, and are frozen through one-half the year; but it is believed that the safety of the cable would not be endangered by the ice. It may be added that the cold, dry air of high latitudes, as well as snow and ice, are highly non-conducting, and so favor insulation and the rapid transmission of the electric current. Little seems to be feared on the score of interference by the sparse population, Indian and Tartar, along the route, unless, as Mr. Cochrane suggests, it be in the case of certain unsubdued tribes in Russian America, toward Behring's Strait. If the overland line be constructed, and the Atlantic cable laid down, with success, they will together serve to complete a telegraphic circuit around the earth between the parallels of 42° and 65° north latitude. In accordance with Mr. Seward's recommendation, an act of Congress was passed, approved July 1, 1864, granting to Mr. Collins the right of way across the public lands, with the right to take therefrom materials for constructing the same, and the use of a national vessel, officered and equipped, to make surveys and soundings and to aid in prosecuting the work. The act requires, further, "That the rate of charges for public or private messages shall not exceed on said line the average usual rates in Europe and America for the same service, or such rates as shall be ascertained and

fixed by a convention between the United States, Russia, and Great Britain."

The interval requiring to be spanned by the wire of the overland line, materially reduced at the western extremity by the prospective early completion of the Siberian telegraph to its terminus, has been not less so at the eastern, by lines constructed within the past few years. The Western Union Telegraph Company, under the lead of its indefatigable president, Hiram Sibley, Esq., of Rochester, N. Y., completed in 1861 a telegraph line connecting the more easterly net-work of the continent with the California wires at San Francisco; and a northward extension of the State line, later carried along the Pacific coast, had in November, 1864, been constructed to Olympia, on the south of Puget's Sound, and thence to Victoria, on Vancouver's Island. Immediately upon the passage of the act of Congress above referred to, Mr. Collins closed an arrangement with the Western Union Co., assigning to it the Russian and British concessions, the company on its part assuming the construction and operation—under the name of the "Western Union Extension"—of the overland intercontinental line, and in accordance with the grants already named. March 7th, 1865, Col. Charles S. Bulkley, engineer-in-chief of the overland line, sailed with his party from San Francisco for New Archangel, on Sitka Island, the capital of Russian America. A detachment was to be landed at Victoria, to complete a small break in the line between that point and New Westminster, on Frazer River, in British Columbia—a matter, probably, of some three weeks' labor. At least three vessels, carrying the needful supplies and materials, will be engaged in the work of the expedition, the entire land and naval force of which will number not less than fifteen hundred men.

The present intention of the company is, if practicable, to make the overland line an extension of that from San Francisco to New Westminster. Starting from the point last named, they will probably carry the line to some distance up Frazer River, and thence along a somewhat inland course, taking in the way the Finlay branch of Peace River, and the Pelly River, passing thence to and along the Yukon, and then down the Kvichpak, into which it flows, nearly or quite to the mouth of the latter. Thence the line may pass to Cape Prince of Wales, across Behring's Strait to East Cape, from that point around the Gulf of Anadir, down the coast, across the head of the peninsula of Kamtschatka to Penjinak Gulf, and thence around the Sea of Okhotsk to its terminus at Nicolavsky. Russian preferences, it is said, indicate a route from the end of the Siberian line by cable across the Okhotsk Sea to Petropaulovsky, or else proceeding to the same point by submarine and land lines by way of Saghalien, Yesso, and the Kurile Islands, thence in like manner by Behring and Copper Islands and the Aleutian Islands to Alaska, on

the American side. In either case, some two thousand miles of cable would be required, the greatest length being across the Okhotsk Sea, about six hundred miles, or by the other route at most no longer than three hundred miles. Mr. Collins has estimated the cost of the line by Behring's Strait at a maximum of \$5,000,000; by the Aleutian Islands route it would be much greater. He has also indicated two intermediate routes, neither requiring more than one-fourth the entire length of cable needful by that just named. One of these would be by way of Onulovorskoy (or Olioootorsk), in the north-eastern part of Kamtschatka, to Gore's and Nuniavack Islands, and thence to Cape Vancouver in Russian America; the other, by Cape Navarin, further north, to St. Lawrence Island, and thence to Cape Romanzoff. The distance from New York to London by the overland route has been estimated at about seventeen thousand miles, throughout which, as already seen, only about six thousand miles of telegraph line remain to be constructed. It is believed that this can be accomplished within two, or at the farthest, three years' time. The rising and free commerce of the Amoor River region has already attracted thither many American merchants; but the successful establishment of the proposed line must be followed by general commercial advantages of the highest magnitude, if not also by social and political consequences the extent of which must be at present quite beyond the reach of calculation.

The route which in certain parts the overland line will finally take, it has already become apparent, remains in a measure subject to the decision of future developments; and among the changes to be made may possibly be the choice of a more easterly point of departure from the northern limit of the United States, and perhaps also of a more inland course through British America. Of certain acts of Congress, approved July 2, 1864, and which make grants for railroad and telegraph lines to the Pacific, one authorizes such road and line from Lake Superior to Puget's Sound. By a report of a committee of the Hudson's Bay Company, also, it appears that that company has already had surveys made, and material to some extent ordered, for a telegraph line from the settlements of the Red River (of the north), through their territory and British Columbia, to New Westminster—this line also, at its western portion, to run along Frazer River. It is hoped to have this line completed within a year. As it would still require some years to effect a junction with the Canadian system at Collingwood or Ottawa, through the wilderness north of the great lakes, it has been proposed meantime to connect with the Hudson Bay Company's line by a wire from some part of the Western States; and among the propositions to effect this, a bill was (January 5, 1865) introduced by Senator Ramsay, of Minnesota, authorizing the Northwestern Telegraph Com-

pany to extend one of their main lines from St. Paul by the route of the Pacific R. R. to St. Cloud, and thence to the southern boundary of the British Possessions, at or near Pembina, there to connect with the line previously mentioned. When completed, these lines would afford continuous communication from Chicago, by way of La Crosse, St. Paul, St. Cloud, and Pembina, with the western coast of the Continent, at New Westminster.

The Atlantic Submarine Telegraph Line.—The new cable for this line, and which is intended to be laid, as was the preceding one, along the bed of the Atlantic Ocean from the western coast of Ireland to Trinity Bay, Newfoundland, is at the present time far advanced toward completion. This cable, manufactured by Messrs. Glass, Elliott & Co., at Morden Wharf, E. Greenwich, is constructed with the most minute attention to details, and with every possible effort to guard by personal care and by instrumental tests against imperfections of any kind. The plan of its construction differs in several particulars from that adopted for the former cable, to which it is in fact believed to be in all important respects superior. It is believed that the first Atlantic cable failed through the circumstance that, from the manner of its construction, the strain due to its weight in laying came chiefly upon the core; and accordingly, while in the new cable the conducting wires are larger and stronger than in the old, yet the great effort has been so to construct the whole that the core shall be relieved of strain. A section of the new cable perfected measures one inch and one-eighth in diameter. Its core proper presents the ends of seven conducting copper wires, six of which are twisted about a central one; around each of these is seen a homogeneous coating of gutta percha, and which in the section appears about the sixth of an inch thick. About the core is a barely distinguishable ring, marking the place of a layer of jute; and outermost of all, a ring of strengthening and protecting material, somewhat over a quarter of an inch thick, in which appear the ends of ten iron wires, about each of which are closely twisted strands of Manila yarn.

The core of the cable is formed by twisting together the copper wires, and then coating in the manner above indicated. The twisted wires are passed through a vessel containing a compound—the invention of a Mr. Chatterton—the application of which secures a firm adhesion of the film of gutta percha next applied. The core is then subjected to hydraulic pressure, and electrically tested. After this it is again coated with Chatterton's compound, and then with gutta percha; and so on, until four layers of each have been applied, and the entire thickness is about half an inch.

The iron wire, for covering and protecting the core, is manufactured at Birmingham, being drawn from Webster and Horsfall's homoge-

neous iron. Its size is that known as No. 18 (gauge .095); each strand of it is capable of sustaining a strain of 1,000 lbs., under which it is extended to the amount of one per cent. The covering of this wire with the Manilla yarn, like the making of the core, is performed in a separate factory, specially devoted to such purpose. Five strands of the yarn are closely wound upon each iron wire from as many bobbins; each of the machines for the purpose, and which are of two different patterns, being capable of turning out about 140 miles of covered wire a day. As fast as it is thus wound, the wire is passed through a hot solution of tar and gutta percha, the fibrous covering becoming saturated with this; and it is then conducted through tanks of water, to cool this coating material.

At the Morden Wharf factory, the work of closing the covered iron wires upon the core, so as to complete the cable, is performed. The core is received here on large reels: these are sunk in circular openings filled with water; and the coils are then for twelve hours subjected to electrical tests, in order to determine beyond a doubt the continuity of the conducting wires, and the completeness of their insulation. When a faulty transmission of the current takes place, the difficulty is almost invariably found to consist in an imperfect joining of the ends of two lengths of wire. The core having been wrapped in a padding of jute, which is also saturated with a preservative mixture, the covered iron strands are closed upon it, being so wound about the core that when the cable is subjected to strain this shall fall first and mainly upon them; the mechanism, expressly devised for this part of the work, occupies two floors of the manufactory. The closing machines, below, consist essentially of large wheels or tables revolving horizontally, with reels of the several strands so arranged on their margin as to maintain a relatively stationary position, instead of keeping their axes pointed always to the centre of motion. The strands, converging upward toward a small opening in the ceiling, meet, and are twisted round the jute-covered core. The cable, thus formed entire, is conducted over grooved wheels to a building the floor of which gives place to huge tanks or vats, eight in number, and between which platforms extend. The depth of these is alike 12 feet, while four of them are circular, 34 feet each in diameter, and four elliptical, each 36 feet by 27. The completed cable is brought down from the wheels overhead, and is carefully coiled away by hand in these tanks, until the capacity of each—about 140 miles—is equalled. Water is kept flowing into each tank over its edge, and, percolating between the coils, is allowed to fill the tank to the height occupied by the cable. The purpose of this is to allow of a continued and thorough testing of the efficiency of the protective covering, the ends of all the portions of cable being carried into the electrician's room, and an elec-

trical current of measured force being continually sent through the wires; by this means the least defect in insulation can be registered with unfailing accuracy, and even to its exact distance and degree.

The size of the copper or conducting wires is that known as No. 18 (gauge .048); and the weight of copper is 300 lbs. per nautical mile, against 107 lbs. per mile in the old cable.

The weight of the new cable completed, as ascertained in air, is 35½ cwt. per mile; that of the former one having been but 20 cwt. Its breaking strain is 7½ tons, while that of the former was only 8½ tons. Its specific gravity is very low—its weight in water being 14 cwt. per mile, against 13.4 cwt. for the old cable. This low gravity is owing to the large proportion of fibrous material present; and in connection with its greatly increased strength, the result gained is that the new cable is capable of supporting in water 11 miles of its length. As, however, the greatest depth of water encountered in laying the former cable was about 2½ nautical miles, it is not probable that the present one will in any case be subjected to a strain equal to its actual strength. The destruction of the fibrous material of the cable by fishes, is believed to be guarded against by the poisonous qualities of compounds with which it has been saturated.

The distance to be spanned by the cable, measured at the surface of the ocean, is about 1,640 nautical miles. It is, however, proposed to produce in all 2,300 miles of cable; and it is expected that this entire length will be finished by the end of the first week of June. From the factory, the sections of cable are conveyed in tanks on the hulks, Amethyst and Iris, to the Great Eastern, lying in the Medway. The shipping of the cable was commenced January 19, 1865. On board the monster steamer, which is to perform the work of laying it down, the cable is in final preparation to be coiled away in three immense tanks. It is expected the expedition will set forth about the close of the month of June. The method of paying out the cable will probably be in the main similar to that before adopted; and if the rate of steaming does not exceed seven knots an hour, the object of the expedition should still be accomplished in from ten to eleven days. The 2,300 miles of cable, even without making allowance for the twist, will contain about 16,000 miles of copper wire, and 23,000 of iron wire, besides a very much greater length of the strands of fibrous material.

Among other great lines, mainly submarine, which have been projected with more or less probability of future accomplishment, are, one from San Francisco or Panama to the Sandwich Islands, and thence in time to China or Japan; one from France to the Azores, and thence to New York; and also one to consist in an extension of an existing French line from Marseilles, through Corsica and Sicily to Tri-

poli, and thence along the northern and western coasts of Africa to some point near the mouth of the Senegal or of the Gambia, thence across the Atlantic to Pernambuco, or some adjacent point on the coast of Brazil, perhaps taking in the way one or more of the Cape Verde isles and the little island of St. Paul. The distance from continent to continent by the route last named is about 1,400 miles; the ocean-bed is understood to be favorable, and the water not very deep, while ice in any form is unknown. Parties in France, Italy, Spain, Portugal, and Brazil are said to be united in favoring this enterprise.

The reader is further referred to Major Collins' book, "Overland Explorations in Siberia," etc., New York, 1864—a work from which some of the statements of this article are taken; and to "The Telegrapher," monthly, published in New York by the National Telegraph Union.

TENNESSEE. That portion of Tennessee not in the possession of the enemy, continued without change under the authority of the military Governor, Johnson, until the beginning of 1864. Measures were then commenced for the purpose of reconstructing a State Government in sympathy with the Union. On January 26th Governor Johnson issued a proclamation for an election of certain officers on March 5th. This election was to be held in the various counties of the State, "or wherever it is practicable so to do," for justices of the peace, sheriffs, constables, trustees, circuit and county court clerks, registers, and tax collectors. The qualifications required of electors were thus stated:

But inasmuch as these elections are ordered in the State of Tennessee, as a State of the Union under the Federal Constitution, it is not expected that the enemies of the United States will propose to vote, nor is it intended that they be permitted to vote, or hold office.

And in the midst of so much disloyalty and hostility as have existed among the people of this State toward the Government of the United States, and in order to secure the votes of its friends, and exclude those of its enemies, I have deemed it proper to make known the requisite qualifications of the electors at said elections. To entitle any person to the privilege of voting, he must be a free white man, of the age of twenty-one years, being a citizen of the United States and a citizen of the county where he may offer his vote six months preceding the day of election, and a competent witness in any court of justice in the State, by the laws thereof, against a white man, and not having been convicted of bribery, or the offer to bribe, of larceny, or of any other offence declared infamous by the laws of the State, unless he has been restored to citizenship in the mode pointed out by law. And he must take and subscribe before the judges of election the following oath:

I solemnly swear that I will henceforth support the Constitution of the United States, and defend it against the assaults of all its enemies; that I will hereafter be, and conduct myself as a true and faithful citizen of the United States, freely and voluntarily claiming to be subject to all the duties and obligations, and entitled to all the rights and privileges of such citizenship; that I ardently desire the suppression of the present insurrection and rebellion against the Government of the United States, the success of its armies and the defeat of all those who oppose them, and that the Constitution of the United States, and all laws and proclamations made in pursuance thereof, may be

speedily and permanently established and enforced over all the people, States, and Territories thereof; and further, that I will hereafter aid and assist all loyal people in the accomplishment of all these results. So help me God.

And all the judges, officers, and persons holding the election, before entering upon their respective duties, in addition to the oath now required by the laws of the State, shall take and subscribe the same oath, and also that they will permit no one to vote who has not taken and subscribed the oath above set forth, or refuses to do so.

The proclamation was preceded by a public meeting in Nashville on Jan. 21st, relative to a restoration of the civil Government. A large number of persons were present, resolutions were adopted and Gov. Johnson addressed the assemblage. He thus stated his views on the manner of reconstruction:

The election of the primary officers, such as justices of the peace, constables, etc., is fixed by the constitution of the State on the first Saturday in March, and the Executive should say to the people of that State to go to the ballot-box on that day and elect constables, justices, sheriffs, county trustees, and clerks. And when elected, let them be commissioned as they ordinarily are. The agent of the Government supplies the vacuum. Is there any thing outside of the principles of the Constitution in that? Is there any usurpation in it? There must be a beginning somewhere. Don't we all know that in the absence of government there must be something done, seemingly irregular, for the purpose of bringing back order? Then we take a step without precedent, but clearly justifiable, and proceed to elect our officers as we have done heretofore. We look in the various judicial districts of the State, and find they are vacant for judges; we turn to the laws and Constitution of the State, and find that when vacancies occur by death, resignation, or otherwise, the Executive shall make temporary appointments, and these appointees shall hold their places until their successors are elected and qualified. Then, don't we see how easy the process is? Begin at the foundation, elect the lower officers, and then come up to the judiciary, and put it in motion, wherever it can be. But it might be said this can't be done in all the counties. Well, if it is done in a half dozen counties, it is so much done, and that much done we can do more.

A question arose among some of the judges appointed to hold the election, whether it was not sufficient to require of the voters the oath of the President's amnesty proclamation. This caused the following correspondence:

NASHVILLE, February 20, 1864.

Hon. W. H. SEWARD, Secretary of State, Washington, D. C.:

In county and State elections must citizens of Tennessee take the oath prescribed by Gov. Johnson, or will the President's oath of amnesty entitle them to vote? I have been appointed to hold the March election in Cheatham County, and wish to act understandingly.

WARREN JORDAN.

REPLY.

WASHINGTON, February 20, 1864.

WARREN JORDAN, Nashville:

In county elections you had better stand by Gov. Johnson's plan, otherwise you will have conflict and confusion. I have seen his plan.

(Signed)

A. LINCOLN.

The result of the election was stated by the press of Nashville to have been a failure. A large number of soldiers and employes of the Government who had been stationed at Nashville for six months voted, but the people re-

frained from appearing at the polls. The "Union," the official paper of Gov. Johnson, said: "We might as well speak out plainly, and confess to the world, that what was called an election, Saturday, at least so far as Nashville is concerned, was a serious farce. And it would be well if those in authority would observe a like candor, and thereby save scandal to the Government, or at least to this administration." No further steps toward reconstruction appear to have been taken as a consequence of this election. An effort is made in the following statement of the "Argus," published in Memphis, in Gen. Washburne's military department, early in June, to explain the numerous failures in the attempts at reconstruction:

It is quite natural for absent Tennesseans, who observed the interest taken by the State in the work of restoring her to her old position in the Union, as evinced by her public journals, and also notice, that notwithstanding the movement alluded to, we are just where we were a year ago, to inquire what we are doing. With the people of the State so much divided in sentiment regarding the proper policy to be pursued, it could scarcely be supposed that the entire proposition of any one party or clique would be endorsed. Some wanted one thing and some wanted another. While all desired a restoration to the State of civil government and her former position in the Union, all could not unite upon one basis of action. The Amnesty Proclamation came most opportunely. Although all did not endorse every thing it contained, it was undoubtedly the most feasible proposition offered, and there is little doubt that four-fifths of the Union men of the State were willing last spring, and are willing to-day, to reorganize the State in accordance with its provisions. The work was commenced, but soon abandoned. The military Governor of the State, it was soon announced, opposed the plan, and as much depended upon his cooperation, means were soon found to clog the movement. That Tennessee is not to-day in the full enjoyment of all her rights as a State of the Union is not the fault of the people of Tennessee, but of Gov. Johnson and the radical clique, who were then as they are now, opposed to reorganization, except upon their own terms—in exact accordance with their own ideas and aims.

We do not believe, with our contemporary, that if the people, without paying attention to Gov. Johnson, were to proceed with the work of reorganization, he could persuade the Administration "to intervene with the bayonet," and there is no good reason why the people should hesitate to proceed in this work, regardless of Gov. Johnson. As long as the people allow Gov. Johnson to have his own way undisturbed so long will he thwart every effort at reorganization which does not originate with him.

Meantime, in May, a convention was held in East Tennessee, at Knoxville, to take such action as might be necessary to restore civil government in the State. A committee appointed on the subject presented a majority and minority report. The former was in spirit and substance in harmony with the Crittenden resolutions of 1861, and the latter recommended the abolition of slavery in the State, the enlistment of negroes, and the renomination of Mr. Lincoln. Here this movement ended.

On August 8d, a call was published in Nashville for a convention of loyal citizens to meet in Nashville on September 5th, relative to the reorganization of the State. On that day the

convention assembled. Delegates from the east and south were prevented from attending by a raid of General Wheeler, and an adjournment was suggested but not approved. The convention organized by the appointment of Samuel Milligan, President. The Committee on credentials reported the following resolutions:

Resolved, That all delegates who may have been regularly appointed by loyal primary county conventions, shall be admitted to the floor.

Resolved, That all unconditional Union men, who are for all the measures of the Government looking to putting down the rebellion, from the different counties of the State, shall be qualified to participate in the deliberations of this convention; and that all persons claiming seats, under this resolution, be requested, with as little delay as possible, to hand in their names to the committee on credentials.

This report was adopted. A committee on business for the Convention reported, on the 7th, that a convention elected by the loyal people should assemble at an early day to revise the State Constitution; that the Union people of Tennessee should hold an election for President in November; that the electors should be free white men, for six months residents of the State, and have voluntarily borne arms in the Federal service during the present war and are in the service or honorably discharged, and all known active friends of the Government of the United States in each county; that the citizen electors should be registered; that polls should be opened at the county seat of each county, and guarded and protected so as to secure a free and fair election, and also polls opened for soldiers; that the State militia should be immediately enrolled, organized, and armed; that the proceedings of the convention at Baltimore should be adhered to and supported as due alike to self-preservation and self-respect; and that agents should be appointed to look after the interests of Tennessee soldiers and their families. The report was adopted without opposition. On the next day a Presidential electoral ticket was adopted by the Convention. A further report was made by the business committee, expressing the sense of the Convention as in favor of the complete suppression of the rebellion, the immediate abandonment of slavery, and its prohibition in future by all suitable and proper amendments to the State Constitution, which was adopted. Three members of the committee declared their non-concurrence in this portion of the report relating to the immediate abandonment of slavery; subsequently two of them withdrew this declaration. On the next day, the 8th, the business committee made the following report, which was adopted unanimously:

Resolved, That as a means of ascertaining the qualifications of the voters, the registers and officers holding the elections may examine the parties upon oath touching any matter of fact, and should be required to take and subscribe to the following oath, viz. (said oath being *prima facie* evidence subject to be disproved by other testimony):

Oath. I solemnly swear that I will henceforth support the Constitution of the United States, and defend it against the assaults of all its enemies; that I am an active friend of the Government of the United States, and the enemy of the so-called Confederate States; that I ardently desire the suppression of the rebellion against the United States; that I sincerely rejoice in the triumphs of its armies and navies, and in the defeat and overthrow of the armies and navies of all armed combinations in the interest of the so-called Confederate States; that I will cordially oppose all armistices or negotiations for peace with rebels in arms, until the Constitution of the United States, and all laws and proclamations made in pursuance thereof, shall be established over all the people of every State and Territory embraced within the National Union; and that I will heartily aid and assist the loyal people in whatever measures may be adopted for the attainment of these ends; and further, that I take this oath freely and voluntarily and without mental reservation. So HELP ME GOD.

Resolved, That the offices of the State of Tennessee should be filled by none but truly loyal men, the unfaltering friends of the National Union, and that all doubtful men should be at once removed from office.

Resolved, That we do cordially approve and endorse the policy and course of Gov. Andrew Johnson as military Governor of the State.

Resolved, That an Executive Committee of five from each division of the State be appointed, who shall have power, among other things, to fill all vacancies that may occur in the electoral ticket.

Resolved, That the military Governor of the State of Tennessee be requested to execute the foregoing resolutions in such manner as he may think will best subserve the interests of the Government.

On September 7th Governor Johnson issued a proclamation, stating that as military Governor he should proceed to appoint officers and establish tribunals, as he had heretofore done in all the counties and districts of the State wherever the people gave evidence of loyalty and a desire of civil government, and a willingness to sustain the officers and tribunals. All officers were required to take the oath recommended by the Convention, and all cases, civil and criminal, coming before the judicial tribunals of the State involving the rights of colored persons, were to be adjudicated and disposed of as free persons of color.

On Sept. 30th the Governor issued another proclamation, in which, after quoting the resolutions adopted by the Convention relative to the Presidential election, relative to the qualifications of electors and those above mentioned, relative to the oath to be taken by voters, he thus proceeds:

And *whereas*, it further appears from the proceedings of said Convention, "That the military Governor of the State of Tennessee is requested to execute the foregoing resolutions in such manner as he may think best subserve the interest of the Government."

And *whereas*, I, Andrew Johnson, military Governor of the State of Tennessee, being anxious to cooperate with the loyal people of the State, and to encourage them in all laudable efforts to restore the State to law and order again, and to secure the ballot-box against the contaminations of treason by every reasonable restraint that can be thrown around it, I do, therefore, order and direct that an election for President and Vice-President of the United States of America be opened and held at the county seat, or

other suitable place in every county in the State of Tennessee, on the first Tuesday after the first Monday in the month of November next, at which all citizens and soldiers, being free white men twenty-one years of age, citizens of the United States and for six months prior to the election citizens of the State of Tennessee, who have qualified themselves by registration, and who take the oath prescribed in the foregoing resolution, shall be entitled to vote, unless said oath shall be disproved by other testimony, for the candidates for President and Vice-President of the United States.

And to the end that the foregoing resolutions, which are made part of this proclamation, may be faithfully executed, and the loyal citizens of the State, and none others, be permitted to exercise the right of suffrage, I do hereby appoint the several gentlemen whose names are affixed to this proclamation to aid in said election and superintend the registration of the loyal voters in their respective counties, as provided by the fourth resolution above quoted.

But as the day of election is near at hand, and there may be difficulty in completing the registration within the time limited, it is not intended that the registration be an indispensable prerequisite to the qualification of the voter; and in such cases, where it has been impracticable, and where the voter is of known and established loyalty, he shall be entitled to vote, notwithstanding he may not have registered his name as required by the foregoing resolution.

The election shall be opened, conducted, returns made, &c., in all respects as provided for by the fourth chapter of the "Code of Tennessee," except so far as the same is modified by this proclamation.

But, in cases where the county courts fail or neglect to appoint inspectors or judges of election, and there is no sheriff or other civil officer in the county, qualified by law to open and hold said election, the registering agents, heretofore appended, may act in his stead, and in all respects discharge the duties imposed in such cases upon sheriffs.

In like manner, it is declared the duty of military officers commanding Tennessee regiments, battalions, or detached squads, and surgeons in charge of the hospitals of Tennessee soldiers, to open and hold elections on the day aforesaid, under the same rules and regulations hereinbefore prescribed, and at such suitable place as will be convenient to the soldiers, who are hereby declared entitled to vote without oath or registration.

In testimony whereof, I, Andrew Johnson, military Governor of the State of Tennessee, do hereunto set my hand, and have caused the great seal of the State to be affixed at this department, on the 30th day of September, A. D. 1864.

By the Governor, **ANDREW JOHNSON.**
Attest: EDWARD H. EAST, Secretary of State.

The Presidential electors who had been appointed by the Convention were in favor of Mr. Lincoln for President. Another list of Presidential electors in favor of Gen. McClellan was selected by persons not in sympathy with the State Convention. On the appearance of this proclamation of Governor Johnson these Presidential electors united in a protest, addressed to President Lincoln. They state the object of their protest in these words:

SIR: The undersigned, loyal citizens of the United States and of the State of Tennessee, on our own behalf, and on behalf of the loyal people of our State, ask leave to submit this protest against the proclamation of his excellency, Andrew Johnson, military Governor, ordering an election to be held for President and Vice-President, under certain regulations and restrictions therein set forth. A printed copy of said proclamation is herewith enclosed. The Constitution of the United States provides "that each

State shall appoint, in such manner as the Legislature may direct, a number of electors," &c. Under this provision of the Federal Constitution the Legislature of Tennessee, years before the present rebellion, prescribed the mode of election to be observed, which will be found to differ essentially from the mode prescribed by the military Governor. We herewith enclose a copy of the law of Tennessee governing the holding of said election. The military Governor expressly assumes, by virtue of authority derived from the President, to so alter and amend the election law of Tennessee (enacted under authority of the Constitution of the United States, as above set forth), as to make the same conform to his own edict as set forth in the proclamation aforesaid. He assumes so to modify our law as to admit persons to vote at the said election who are not entitled to vote under the law and the constitution of Tennessee. Instance this: our constitution and law require that such voter shall be a citizen of the county wherein he may offer his vote for six months next preceding the day of election; while the Governor's order only requires that he shall (with other qualifications named) be a citizen of Tennessee for six months, &c. This provision would admit to vote many persons not entitled by law. We will, for the sake of brevity, pass over some less important points of conflict between the proclamation and the law, but will instance in this place another. By our law it is provided that the polls shall be opened in every civil district in each county in the State; but the proclamation provides only for their being at one place in each county. This provision would put it out of the power of many legal voters to exercise the elective franchise.

They further protest against the oath required as impracticable, unusual, and a test oath. Many other objections are added. They further protest against the interference of the Governor with the elective franchise, and ask that all military interference shall be withdrawn "so far as to allow the loyal men of Tennessee a full and free election. By the loyal men of Tennessee we mean those who have not participated in the rebellion or given it aid and comfort, or who may have complied with such terms of amnesty as have been offered them under your authority."

This protest was laid before the President on October 15th, by Mr. J. Lellyett, one of the signers and one of the nominated Presidential electors. He published a statement of this interview, of which the following is the material part:

WASHINGTON, October 15.

To the Editor of the World:

I called upon the President to-day and presented and read to him the subjoined protest. Having concluded, Mr. Lincoln responded:

"May I inquire how long it took you and the New York politicians to concoct that paper?"

I replied, "It was concocted in Nashville, without communication with any but Tennesseans. We communicated with citizens of Tennessee outside of Nashville, but not with New York politicians."

"I will answer," said Mr. Lincoln emphatically, "that I expect to let the friends of George B. McClellan manage their side of this contest in their own way; and I will manage my side of it in my way."

"May we ask an answer in writing," I suggested. "Not now. Lay those papers down here. I will give no other answer now. I may or may not write something about this hereafter. I understand this. I know you intend to make a point of this. But go ahead, you have my answer."

"Your answer then is that you expect to let Gen. McClellan's friends manage their side of this contest

in their own way, and you will manage your side of it in your way?"

"Yes."

I then thanked the President for his courtesy in giving us a hearing at all, and then took my leave.

Judge Mason, of this city, was present at the interview, to whom I refer in regard to the correctness of this report. On stepping outside of the door of the executive mansion I immediately wrote down the President's emphatic response, and submitted it to Judge Mason and another gentleman who happened to be present, and they both pronounced it accurate.

JOHN LELLYETT.

The following certificate accompanied it:

WASHINGTON, October 15.

John Lellyett, Esq.:

DEAR SIR: In compliance with the request in your note of this day, I have only to say that I was present at the interview referred to. Your statement of what took place is substantially correct; and on all material points I believe it literally so. Yours truly,

CHARLES MASON.

Subsequently, on October 22d, the President made the following reply:

EXECUTIVE MANSION, WASHINGTON, Oct. 22, 1864.

Messrs. Wm. B. Campbell, Thos. A. R. Nelson, James T. P. Carter, John Williams, A. Blisard, Henry Cooper, Basil Peyton, John Lellyett, Em. Elkeridge, John D. Perryman.

GENTLEMEN: On the 15th day of this month, as I remember, a printed paper, with a few manuscript interlineations, called a protest, with your names appended thereto, and accompanied by another printed paper purporting to be a proclamation by Andrew Johnson, military Governor of Tennessee, and also a manuscript paper purporting to be extracts from the Code of Tennessee, was laid before me.

[Here the President inserts the protest, the proclamation of Governor Johnson, and extracts from the laws of Tennessee.]

At the time these papers were presented, as before stated, I had never seen either of them, nor heard of the subject to which they relate, except in a general way, only one day previously. Up to the present moment nothing whatever upon the subject has passed between Governor Johnson or any one else connected with the proclamation and myself. Since receiving the papers, as stated, I have given the subject such brief consideration as I have been able to do in the midst of so many pressing public duties.

My conclusion is that I can have nothing to do with the matter, either to sustain the plan as the Convention and Governor Johnson have initiated it, or to revoke or modify it, as you demand. By the Constitution and laws the President is charged with no duty in the conduct of a Presidential election in any State; nor do I, in this case, perceive any military reason for his interference in the matter.

The movement set on foot by the Convention and Gov. Johnson does not, as seems to be assumed by you, emanate from the National Executive. In no proper sense can it be considered other than as an independent movement of at least a portion of the loyal people of Tennessee.

I do not perceive in the plan any menace of violence or coercion toward any one. Gov. Johnson, like any other loyal citizen of Tennessee, has the right to favor any political plan he chooses, and, as military Governor, it is his duty to keep the peace among and for the loyal people of the State. I cannot discern that by this plan he purposes any more.

But you object to the plan. Leaving it alone will be your perfect security against it. Do as you please on your own account, peacefully and loyally, and Gov. Johnson will not molest you, but will protect you against violence so far as in his power.

I presume that the conducting of a Presidential

election in Tennessee in strict accordance with the old code of the State is not now a possibility.

It is scarcely necessary to add that if any election shall be held, and any votes shall be cast in the State of Tennessee for President and Vice-President of the United States, it will belong, not to the military agents, nor yet to the Executive department, but exclusively to another department of the Government to determine whether they are entitled to be counted, in conformity with the Constitution and laws of the United States.

Except it be to give protection against violence, I decline to interfere in any way with any Presidential election.

ABRAHAM LINCOLN.

Subsequently, on October 29th, Messrs. Campbell, Peyton, and Lellyett, made a reply to the President's letter, which concludes thus :

After consultation with our friends, therefore, in different parts of the State, and having communicated with nearly all of our colleagues, we respectfully announce to the people of Tennessee that in view of what is set forth above—in view of the fact that our people are overawed by military power, the laws set aside and violated with impunity—and in view of the fact that we have appealed in vain to the President, whose duty it is “to see that the laws be faithfully executed,” and that those who act by his authority shall hold sacred the liberties of the people; in view of these things we announce that the McClellan Electoral Ticket in Tennessee is withdrawn.

An election was held on November 8th, but the vote of the State was not counted in the returns of the Electoral College by Congress.

The Convention which assembled in September and nominated an electoral ticket also appointed a State Executive Committee. This Committee issued a call in December, inviting the people of Tennessee to meet in Nashville in Convention on January 9, 1865, to nominate a ticket, which it was generally understood would consist of one hundred names of persons to compose a second convention. It was intended that this second body should revise the State Constitution and submit their work to the people for approval.

The Convention thus invited by the Committee assembled at Nashville on January 9th, and was organized by the election of Col. S. K. Rodgers, President; Col W. B. Wilson, Col. W. K. Hall, and Gen. A. C. Gillem, Vice-Presidents. On taking the chair the President made some explanations as to the object of the Convention. He said :

It was the design to nominate delegates to a State Constitutional Convention, to reform the State Government. We were now at a dead lock; something must be done to set the wheels of the Government in motion. The State has been redistricted by a bogus Legislature, which could not be recognized without recognizing secession. The convention of delegates to be chosen could redistrict the State; and we should have one as speedily as compatible with the public interest. The work was a great and important one; and he hoped there would be harmony among delegates. We must have civil government. The army cannot altogether put down guerrillas; but with the aid of civil government, with a Governor and judiciary, all could be easily effected. Besides, we must have representatives in the National Congress; and to do this we must adapt the State Constitution to existing circumstances, and have a legislature.

A report made by the committee on credentials was laid on the table and the following resolution adopted :

Resolved, That all delegates who give an active support to the Union cause; who have never voluntarily borne arms against the Government; and who have never voluntarily given aid and comfort to the enemy, be entitled to seats in this Convention.

On Tuesday, January 10th, a business committee was appointed, to whom all resolutions were referred. The day was occupied in discussing the basis of voting in the Convention, and resolutions were adopted giving one vote to each county, and one in addition for each one hundred, or fraction over fifty Union votes cast in 1861. Great opposition was made to this basis of voting by delegates from Middle and West Tennessee, where the Confederate force interfered with the election.

On the third day (Wednesday), in order to avoid dissatisfaction, this basis of voting was reconsidered and withdrawn. The convention was then occupied with speeches on general topics, awaiting the report of the business committee, which was presented during the afternoon. There was both a majority and minority report on the amendments proposed to the Constitution. There was no serious disagreement between both reports, but they differed in opinion on the power of the convention to act on the subject. The majority report urged action on these grounds :

The first Article and the first Section of the Declaration of Rights in the Constitution of the State of Tennessee, declares: “That all power is inherent in the people, and all governments are founded on their authority, and instituted for their peace, safety, and happiness; and for the advancement of these ends they have at all times an inalienable and indefeasible right to alter, reform, or abolish the government in such manner as they may think proper.” Therefore, a portion of the citizens of the State of Tennessee and of the United States of America, in convention assembled, do propound the following alterations and amendments to the constitution, which, when ratified by the sovereign loyal people, shall be and constitute a part of the permanent Constitution of the State of Tennessee.

The minority report was made by only one member of the business committee, J. R. Hood, of Hamilton County. The report says :

Whilst agreeing with the majority of the committee in most of the amendments proposed, and not desiring to divide the Union people of Tennessee by any premature discussion of them, yet we cannot, consistent with our ideas of the motives for which this convention was called, and by authority of which it is now assembled, agree with them in their opinion that the powers conferred on this body justify it in adopting any amendments to the organic law of the State. The following—among others—are the reasons which induces us to adopt this course :

1. The call under which this body is assembled, does not authorize any such action. In fact, the specific object is there stated, being only advisory in its character, and looking to the assembling hereafter of a duly elected and qualified body of delegates, clothed with full power to make all necessary amendments.

2. Many of the delegates now present inform us that no meetings were held in their counties authorizing them to act in a representative character, and that they are here only as individual members of the Union organization of the State.

3. We feel the danger of treading in the footsteps—even by implication—of the leaders of the rebellion in the State of Tennessee, under Isham G. Harris, who inaugurated and set on foot the ordinance of secession by the legislative body, then assembled, and its subsequent ratification by the people on June 8th, 1861, and whose action was openly and publicly condemned by us because of its revolutionary, rebellious, and unauthorized character.

4. The majority of your committee, we understand, agree with us in the legality of the course hereafter proposed by us, whilst we cannot agree with them in the assumed right and power of resolving ourselves into a constitutional convention, clothed with the authority of changing the organic and fundamental law of the State, and thereby depriving the people of the rights which belong to them alone. For these reasons and many others which will readily suggest themselves to the mind of the intelligent loyalist, we offer this resolution:

Resolved, That the acting Governor of the State of Tennessee be instructed and requested to issue writs of election to be held on the 23d day of February, 1865, for the election of one hundred delegates on the general ticket system, who shall assemble at Nashville on the 4th day of March thereafter, to take into consideration such measures as will make the organic law of the State homogeneous with the liberal policy of the Government of the United States, their action to be submitted to the people for ratification or rejection on April 20th, 1865.

The amendments to the Constitution recommended by the report of the majority proposed the abolition of slavery; the appointment by the Governor and Senate of judges of the Supreme Court; the qualification of voters, allowing all persons of color who could be witnesses to vote; together with a schedule of measures relating to local concerns of the State.

On Thursday, the fourth day, January 12th, 1865, the various propositions were discussed, and at night the Convention adjourned to hear an address from Governor Johnson.

On the next day, Friday, the question of power in the Convention was discussed during the forenoon, when the business committee withdrew the report of the majority, and substituted a revised report, which proposed merely the abolition of slavery. After some discussion the question was taken on a motion to substitute resolutions of Col. Butler for the amended report of the business committee. These resolutions declared distinctly that the Convention would exceed its powers by taking the action proposed in the majority report. The vote was 118 for the resolutions and 161 against them. Many delegates had gone home. Says one correspondent: "The great speech of Gov. Johnson fixed the course of action irrevocably. The party favorable to postponement gradually crumbled away, lost its identity, and on the final vote upon the amended resolutions manifested nearly as much enthusiasm as their original supporters." The report of the committee adopted was as follows:

The first Article and the first Section of the Declaration of Rights in the Constitution of the State of Tennessee, declares: "That all power is inherent in

the people, and all free governments are founded on their authority, and instituted for their peace, safety, and happiness; and for the advancement of these ends they have at all times an inalienable and indefeasible right to alter, reform, or abolish the Government in such manner as they may think proper." Therefore, a portion of the citizens of the State of Tennessee and of the United States of America in convention assembled, do propound the following alterations and amendments to the constitution, which, when ratified by the sovereign loyal people, shall be and constitute a part of the permanent Constitution of the State of Tennessee.

PROPOSED ALTERATIONS AND AMENDMENTS.

ART. 1, Sec. 1. That slavery and involuntary servitude, except as a punishment for crime, where the party shall have been duly convicted, are hereby forever abolished and prohibited throughout the State.

Sec. 2. The Legislature shall make no law recognizing the right of property in man.

There was also adopted a schedule which repealed the section of the Constitution which forbid the General Assembly to pass emancipation laws; annulled the military league made with the Confederate States; also the declaration of independence and secession ordinance; suspended the statute of limitations from May, 1861; actions for torts began by attachments, may proceed without personal service of process on the defendant; annulled all laws and ordinances of the seceded State Government; deprived the Legislature of power to pay bonds, interest, or debts contracted or issued by the seceded State Government, and affirmed all civil and military appointments of Gov. Johnson. These amendments were to be submitted to a vote of the people on February 22d; and if adopted by the people, a State election was to be held on March 4th ensuing, for Governor and members of the Legislature, the latter to be voted for by general ticket upon the basis prescribed by act of February 19th, 1852. The Legislature was required to assemble on April 8d.

The following resolutions accompanied the amendments and schedule relating to voters:

Resolved, That the elections in the several counties shall be held at their county seats, or other convenient places in the counties, by the following named persons, to wit:

Resolved, That when the above amendment of the Constitution of the State of Tennessee shall be submitted to the qualified voters of the State for their ratification or rejection, and at the first election held under said Constitution as amended if ratified by the people, no person shall be permitted to vote unless he first take the following oath at the polls; and the name of each voter shall be written upon the back of his ticket, and it shall be the duty of judges and clerks of said elections to preserve said tickets and file them with the clerks of the county courts of their respective counties for future reference. Provided, however, That this oath shall not be required of the citizens who are well known to the judges of the election to have been unconditional Union men. Provided, also, that voters otherwise qualified, may vote within any county of the State, and if in the military service, wherever they may be on the day of election, and that the commanding officer of each regiment, battalion, detachment, battery, or hospital, is empowered to hold such elections.

I solemnly swear that I will henceforth support the Constitution of the United States, and defend it against the at-

saults of all its enemies; that I am an active friend of the Government of the United States, and the enemy of the so-called Confederate States; that I ardently desire the suppression of the present rebellion against the Government of the United States; that I sincerely rejoice in the triumph of the armies and navies of the United States and in the defeat and overthrow of the armies, navies, and all armed combinations in the interest of the so-called Confederate States; that I will cordially oppose all armistices or negotiations for peace with rebels in arms, until the Constitution of the United States and all laws and proclamations made in pursuance thereof, shall be established over all the people of every State and Territory embraced within the National Union; and that I will heartily aid and assist the loyal people in whatever measures may be adopted for the attainment of these ends; and further, that I take this oath freely and voluntarily and without mental reservation. So help me God.

Resolved, That the returns of this election shall be made to the Secretary of State, and that the result be declared by the proclamation of the acting Governor.

Resolved, That the Convention do nominate and offer to the people a candidate for Governor, and that the delegates from the several Senatorial and Representative districts be requested to nominate and present to the Convention candidates for their respective districts, to be placed upon the general Legislative ticket. Provided, that nothing in this resolution shall be construed to prevent the people in the different counties making nominations for candidates for the Legislature.

The Convention then nominated W. G. Brownlow for Governor, and Senators and Representatives of the Legislature, and persons to hold the elections in the different counties. It then adjourned.

The vote on the proceedings of the Convention was taken on February 22d, 1865. In East Tennessee, 15 counties, the vote for ratification was 9,605; for rejection 9; in Middle Tennessee, in 21 counties the vote for ratification was 11,877, for rejection 87; in Shelby County, West Tennessee, the vote for ratification was 878; for rejection 2. The vote of the Tennessee troops was, for ratification 3,488; for rejection 0. Total for ratification 25,298; do. for rejection 48.

The vote of the State at the Presidential election in 1860 was 145,888. The vote of the State on the election of delegates to the State Convention in 1861 was as follows:

	Union.	Secession.
East Tennessee.....	80,908	5,577
Middle Tennessee.....	84,808	9,528
West Tennessee.....	24,091	9,844
	<hr/> 91,808	<hr/> 24,749
	24,749	

Union majority..... 67,054

A proclamation was issued by Gov. Johnson declaring the amendments to the Constitution to be ratified. An election was subsequently held for Governor and members of the Legislature, on a general ticket, and carried without opposition. W. G. Brownlow was chosen Governor. The subsequent events belong to the record of 1865.

The military operations in the State were confined to raids by the enemy with the exception of the advance of Gen. Hood upon Nashville. (*See ARMY OPERATIONS.*) The distress of the inhabitants, especially in East Tennessee, became most severe. It was stated, in an address to President Lincoln, that of a voting pop-

ulation of 85,000 Union men in East Tennessee, 15,000 to 18,000 had stolen away from home and enlisted in the Union army in Kentucky; that the enemy in 1861 took 60,000 hogs, and other stock in proportion; that Burnside's, Sherman's, and Longstreet's armies had exhausted the remaining supplies; that probably not five per cent. of the usual breadth of wheat could be sown in the spring of 1864, as the fences had been destroyed and the farms left desolate. Even the supply of seed for the common products of farms was gone. Contributions were sent by the Northern people to aid the sufferers.

The permanent Federal military posts were at Memphis and Gallatin in West Tennessee, Nashville and Murfreesboro in Middle Tennessee, and Knoxville in East Tennessee. In the vicinity of these posts detachments were also stationed. At the commencement of the year the Confederate General Longstreet held a line in East Tennessee extending from Strawberry Plains to Sevierville, and numerous skirmishes took place between the hostile forces before Longstreet withdrew to Virginia. The attack on Fort Pillow, in West Tennessee, and the raid of Gen. Forrest at that time, are stated under the title of ARMY OPERATIONS; also the defeat of Gen. Sturgis in his march from Memphis toward Mississippi. In August East Tennessee was invaded by Wheeler, and much damage was caused in the destruction of the railroad, burning of bridges and depots. On Sept. 4th Gen. Gillem surprised and defeated the small force of the guerrilla John Morgan at Greenville, in East Tennessee. Morgan had sought to rest himself for the night at a private house, when the occupant, Mrs. Williams, the wife of a member of Gen. Burnside's staff, informed the Federal forces, a number of whom arrived in season to slay him as he attempted to escape from the house. Gen. Gillem took about seventy-five prisoners. The important military movements in East Tennessee, near the close of the year, will be found under ARMY OPERATIONS. In Middle Tennessee, early in September, Gen. Wheeler appeared with his force, consisting of several thousand horsemen and several sections of artillery. His advance came within the neighborhood of Murfreesboro. Nearly half the railroad between that post and Nashville was destroyed. This expedition was soon followed by another under Gen. Forrest, which came near Tullahoma, and destroyed a few miles of the railroad and cut the telegraph wires in several places. The raid of the enemy, however, was a success. Three regiments of Federal infantry and several pieces of artillery were captured; one of the regiments, the 110th colored, was reported to have been treated as prisoners of war. Several miles of trestle-work and several bridges were also destroyed by Forrest.

The permanent occupation of Nashville as a military base for the Federal army caused a most rapid development of the social evil

known as the prostitution of women. Its effects upon the army were so bad as to require the interference of military authority. This authority was exercised to restrict and regulate the evil.

Early in the summer of 1863, Gen. R. S. Granger, then commanding this post, was "daily and almost hourly beset by the commanders and surgeons of regiments urging him to devise some method (in order to preserve the health and efficiency of their troops) to rid the city of this class of women." The first arrangement that suggested itself was expulsion. They were collected together, and put on board a steamer. "On the 8th of July the boat, with her remarkable crew, shoved off from her moorings. On reaching Louisville, Ky., where they were directed to discharge their freight, the authorities refused to receive any such commercial articles. The manager of the boat then took them to Cincinnati, where a similar fate awaited them. By an order from Washington, the boat was directed to return. She arrived and discharged her miserable cargo on Aug. 8, 1863."

Sickness among the soldiers increased at once, and again the officers renewed their complaints and demands for a remedy. The Provost Marshal, Col. Spaulding, of the 18th Michigan infantry, subsequently of the 12th Tennessee cavalry, proposed, with Gen. Granger's permission, to institute a plan for the preservation of the health of the city in this particular. The General endorsed his scheme, and it was put in operation at once. He proposed that these persons should be compelled to report to a medical officer for examination, and if found to be free from contagious diseases, permitted to pursue their vocation; on condition, first, that they should pay a fee for this license, and secondly, that they should submit at stated periods to a medical inspection. Whenever they were found to be diseased, they were to be sent to a hospital and not permitted to leave it until they were cured.

For the first certificate of health one dollar was charged; for the license five dollars; for every subsequent certificate one dollar. This money was to be applied to the support of a hospital.

On the 20th of August a notice was served on every public woman to report, under penalty of arrest and imprisonment in the workhouse for not less than thirty days.

After a trial of some months, the plan was completed; and now, every ten days, these people are obliged to report to the surgeon. Two special hospitals were established at Nashville; one for unfortunate females and the other for their male counterparts in the army. These were placed under the charge of Surgeon W. M. Chambers, U. S. volunteers, with Surgeons Fletcher and J. J. O'Reilly as assistants.

Up to the 1st of Jan., 1864, sixty patients had been placed in the hospitals and restored to

health. Had no such institution existed, it is probable that there would have been many hundreds of other patients in the military hospitals alone, not to speak of citizens and their innocent victims in private life.

Eleven have been reformed, and are now living virtuous unmarried lives; and at least thirty-two have forsaken their old mode of existence, and are married women. And this, too, without any special effort at their reformation; for the hospital is simply a medical institution, established solely for the purpose of preserving the health of the army.

Of 126 women, of whose biographies Dr. Chambers has taken notes, only four were educated, and they were driven, they say, to a vicious life, by the mistreatment of friends and husbands.

The majority of the women, he believes, are led to adopt this deplorable expedient for support by the cruelties of friends. The majority of them were left without parents, and the mistreatment of guardians drove them to the streets. One in six are impure from choice, or are the victims of the inherited malady, known in medical science as nymphomania. A very large majority—the doctor thought four-fifths—could be restored to a virtuous life, if the proper efforts were made for their rescue.

The number of patients in the hospital averages from five to ten; it has been as high as twenty-eight; every arrival of troops from the front or the North invariably increases the sick list. Excepting at such times, sickness is very seldom contracted in the city; it is imported. The statistics show that officers are more immoral than the enlisted men; yet hardly once a month now (whereas formerly it was a daily incident) is a prescription made for them. The plan has saved thousands of men from the sick list, thereby promoting the efficiency of the army. One report concludes in these words:

The method adopted in the army at this post has met with the hearty approval of all classes of society, commencing with the lieutenant-general commanding the armies of the United States, and of all citizens who have had the subject before them, together with the unfortunates themselves; and I will add, that if a similar plan had been adopted at the various cities North, where the troops went to or passed through them veteranizing, there would not have been one case of sickness where now there are twenty. The facts of this hospital bear me out in this conclusion.

The most noteworthy of these facts is the startling announcement that out of nineteen hundred and two soldiers, patients at the military special hospital, only twenty-four of them contracted their maladies in Nashville. Complaints from officers have entirely ceased.

After an experience of one year, Dr. Chambers wrote:

From carefully kept statistics I am more than ever impressed with the opinion that the system is attended with the very best results to the army, and hope now soon a like plan shall be adopted in all the cities where troops are stationed. Already surgeons have been sent here from Memphis and Louisville to examine into the working of the plan in the city, and I

have no doubt these cities will have similar systems in a short time.

There are between three and four hundred of these persons in Nashville. The fees paid to the medical officers entirely support the hospital. The adoption of this plan, therefore, in other cities, will be attended by no expense; on the contrary, it would save, if universally adopted, millions of dollars and hundreds of lives every year.

TERRITORIES OF THE UNITED STATES.

The present divisions of the vast domain of the United States, which have been organized into territories, are Arizona, Colorado, Dakota, Idaho, Indian Territory, Montana, Nebraska, New Mexico, Utah, and Washington. For their area, population, original organization, etc., see *ANNUAL CYCLOPEDIA*, 1862.

ARIZONA.—The explorations in 1864 brought to light and led to the occupation of districts of rare value in this territory. Adding the resources of northern and central Arizona, now known to those long developed below the Gila River, and there is, with many barren acres common in all metalliferous countries, an extent of mineral, agricultural, pastoral, and timber lands, equal in the aggregate to the area of the State of New York. In gold, silver, platinum, copper, and lead, no portion of the world is richer. The agricultural lands on the Salinas River are capable of supplying food for a State. Irrigation is not necessary in that region if the rains are as frequent as during the last year; other parts have suffered for two years from drought. In the southern districts, where it is required, the rivers are large and regular in their flow. The wheat produced is excellent, and the grasses unsurpassed in nutritious qualities. Wood is abundant.

The seat of Government is Prescott. The territorial officers are John N. Goodwin, of Maine, Governor; Richard O. McCormick, of New York, Secretary; — Turner, of Iowa, Chief Justice; Coles Bashford, of Wisconsin, Attorney General. A weekly newspaper called the "Arizona Miner" is published at Fort Whipple. At the election for delegate to Congress, Charles D. Poston, Republican, received 514 votes; Charles Leib, Democrat, 226, and 145 scattering.

COLORADO.—This territory is unusually rich in gold. The delegate from the territory to Congress, Mr. H. P. Bennett, made the following statement before the House: "Judging from what I know of the undeveloped resources of this country, from what I am told by practical miners who are well informed upon this subject, I say here to-day, before this House and before this country, to be placed upon the records and read of all men, that within five years' time, and by the year 1869, the gold fields of Colorado Territory will produce \$50,000,000 annually, and even then its full resources of mineral wealth in gold alone remain not wholly developed. I speak from the united testimony of practical miners who have spent several

years in the mines of California, when I say that the gold-bearing region of Colorado is far more extensive, quite as inexhaustible, and the gold-bearing quartz of a much richer quality than in California."

In 1859 the amount of Colorado gold received at the Philadelphia mint was \$62,000; in 1861 it was \$1,000,000, and in 1864 it was estimated at \$20,000,000. Some difficulties occurred with the Indians during this year. The military force of the territory is strong and able to contend with them. An act was passed at the last session of Congress to enable the people of the territory to form a State Government. The people, however, postponed the subject. The Governor of the territory is John Evans, who resides at Denver City.

DAKOTA.—The Governor of this territory is Newton Edmonds. The capital is Yankton, on the Missouri River, due west from Chicago, and about sixty miles from the Iowa State line. The state of hostilities which prevailed a year ago between a portion of the Sioux tribes and the Government continued during 1864, and great excitement has necessarily existed even among those tribes who are friendly to the whites. The failure of the crops among the Indians has been so great as to make it necessary to provide supplies to keep them from starvation.

IDAHO.—This territory was organized under an act of Congress of March, 1863. Its Governor is Caleb Lyon: the Secretary, W. B. Daniels. Two weekly newspapers are published in the territory, the "Boise News" at Idaho City, and the "Golden Age" at Lewiston. At the election for delegate to Congress, the Democratic candidate was chosen by a small majority. The boundaries of the territory were thus defined by Congress:

"Beginning at a point in the middle channel of the Snake River, where the northern boundary of Oregon intersects the same; then follow down said channel of Snake River to a point opposite the mouth of the Kooskooskia, or Clearwater River; thence due north to the forty-ninth parallel of latitude; thence east, along said parallel, to the twenty-seventh degree of longitude west of Washington; thence south, along said degree of longitude, to the northern boundary of Colorado Territory; thence west, along said boundary, to the thirty-third degree of longitude west of Washington; thence north, along said degree, to the forty-second parallel of latitude; thence west, along said parallel, to the eastern boundary of the State of Oregon; thence north, along said boundary, to the place of beginning."

This boundary was changed at the session of Congress of 1868-'64. The last section of the Montana Act provides that "until Congress shall otherwise direct, all that part of the territory of Idaho included within the following boundaries, to wit: Commencing at a point formed by the intersection of the thirty-third degree of longitude west from Washington with

the forty-first degree of north latitude; thence along said thirty-third degree of longitude to the crest of the Rocky Mountains; thence northward along the said crest of the Rock Mountains to its intersection with the forty-fourth degree and thirty minutes of north latitude; thence eastward along said forty-fourth degree thirty minutes to the thirty-fourth degree of longitude; thence northward along said thirty-fourth degree to the forty-fifth degree north latitude; thence eastward along said forty-fifth degree to the twenty-seventh degree of longitude; thence south along said twenty-seventh degree to the forty-first degree north latitude; thence west along said forty-first degree to the place of beginning, shall be, and is hereby, incorporated temporarily into and made part of the territory of Dakota."

It is computed, from reliable information, that the entire yield of gold from the mines east of the Cascade range, during the season of 1861, was nearly \$5,000,000; and it is calculated that the yield of 1862 and 1863 approximated to \$20,000,000.

This territory embraces within its boundaries the productive mineral regions of Salmon River, Boise, Oro Fino, Beaver Head, Warren's Diggings, and numerous other mining localities that have been recently discovered. The principal towns in Idaho, are Lewiston, the capital, situated at the junction of the Clearwater with Snake River, and from whence is transported in boats, by teams and pack animals, the greater proportion of the supplies used by the mining population scattered throughout the territory. Oro Fino, which lies nearly due south of Lewiston, Elk City, Florence, Placerville, and Ban-nock City, are also places of considerable importance commercially, and contain an average of fifteen hundred inhabitants each. Considerable trade is also carried on at Forts Boise, Benton, Owen, Lemhi, Hall, and Bonneville, at some of which troops are stationed for the protection of immigrants and settlers against the depredations of the numerous bands of Indians who roam over that vast scope of country.

The Oro Fino gold mines were discovered during the summer of 1860, by a prospecting party under command of Captain Pierce. A portion of this party passed the winter of 1860-'61 in the mines of Oro Fino, and such was the result of their labors that nearly five thousand miners and traders found their way to these mines during that year, and succeeded in establishing the towns of Oro Fino and Elk City. The discovery of rich gold mines in this vicinity naturally excited prospecting parties to extend their researches. Accordingly, in 1861, a party of men under the direction of J. J. Healy, successfully worked on Salmon River. Other parties also worked in the Oro Grand District. In May, 1862, rich gold discoveries were made in what is now known as Warren's Diggings, to which the rush was so great that the rival towns—Richmond and Washington—were at once established.

In the summer of 1862 a party of prospectors, under the command of a miner name Grimes, entered the Boise region in search of gold, but, whilst encamped upon a small creek, they were attacked by Indians, and their leader killed. The locality is now known as Grimes's Creek, situated midway between Placerville and Ban-nock City.

INDIAN TERRITORY.—This territory comprises the tract of country adjoining Kansas and Arkansas, to which the southern Indians have been removed from their former residences within the limits of the old States. The number of these tribes is large, and a general feeling of discontent prevails among them because of the destitution of their families and the failure of the Government to send into their country a sufficient force to preserve order and protect them against the wholesale plundering, robbing, and thieving to which they have been subjected at the hands of the rebels, and of whites professing to be their friends and loyal to the Government. Probably no portion of the country, of equal extent within the territorial limits, is better adapted to the business of stock-raising than is this country owned by these Indians. Prior to the war they had engaged in this business extensively, and many of them owned herds of cattle numbered by thousands. When the people were driven forth their stock was necessarily left behind without ostensible owners. The Confederates availed themselves of this condition of things to procure immense supplies of beef for their armies.

MONTANA.—This territory was organized under an act passed at the last session of Congress. Its boundaries are as follows: "Commencing at the intersection of the twenty-seventh degree of longitude west from Washington with the forty-fifth degree of north latitude; thence due west on said forty-fifth degree to its intersection with the thirty-fourth degree of longitude; thence due south along said thirty-fourth degree to the forty-fourth degree and thirty minutes; thence due west along said forty-fourth degree and thirty minutes to its intersection with the crest of the Rocky Mountains; thence following the crest of the Rocky Mountains northward till its intersection with the Bitter Root Mountains; thence northward along the crest of the Bitter Root Mountains to its intersection with the thirty-ninth degree of longitude; thence along said thirty-ninth degree northward to the boundary line of the British possessions; thence eastward along said boundary line to the twenty-seventh degree of longitude; thence southward along said twenty-seventh degree to the place of beginning."

The Governor of the territory is Sidney R. Edgerton. The country is rich in gold and silver mines. Virginia City has grown very rapidly, with a mining population attracted by the diggings. The Indians are numerous in the territory, and were troublesome during the year. The great want of the territory is adequate machinery to develop its wealth and

capital to make the proper explorations. The population of the territory is about 20,000, of which nearly one-half are at Virginia City. The Governor's residence is at Bannock City.

NEBRASKA.—An act was passed by Congress at its last session, to enable this territory to form a State Government. The delegates elected to prepare a Constitution met at Omaha on July 4th, and voted to adjourn *sine die*. The vote for delegate to Congress was for Hitchcock, Republican, 8,486; Miller, Democrat, 2,399. The Legislature contains thirty-one Republicans, and twenty-one Democrats. The Governor of the territory is Alvin Saunders, and the Secretary Algeron S. Paddock. Their official residence is Omaha. The greater number of the four bands of Sioux Indians, which are under the charge of the Indian Superintendency, remained hostile, and military operations against them were continued through the year. Major-General Pope, in command of this military Department, recommended to the Government to gather the Indians around military posts, disarm them, and compel them either to become good farmers and Christians, or to starve. Others proposed to buy lands for them with their annuities, and scatter them among the whites throughout the thickly-settled portions of the country.

NEW MEXICO.—This territory has continued undisturbed since its successful occupation by the Federal forces in 1862. The Governor is Henry Connolly, and the Secretary Wm. F. M. Army. Capital Santa Fé. Some difficulties occurred between the military and some of the civil authorities, as appears by a letter of Judge J. G. Knapp, making charges against Gens. Carlton and West. In stating the classes of offences which he charges, he says:

They have set up in New Mexico a military despotism worse and more oppressive than the worst and most cruel tyrants of any country have ever established, and threaten citizens with imprisonment and death who dare oppose their unjust and oppressive measures: and all this is done when no enemy is near nor any necessity exists for their conduct.

WASHINGTON TERRITORY, situated in the extreme northwest, contained in 1864 an estimated population of 14,000. The capital is Olympia, and the Governor William Pickering; secretary, Elwood Evans. The Legislature consists of a Council and House of Representatives, which assemble annually on the first Monday of December. The former is composed of nine members, and the latter of thirty. The total vote of the territory in 1863 for a delegate to Congress was 3,381. Of these votes George E. Cole, Democrat, received 1,644; and J. O. Raynor, Republican, 1,446; and 41 scattering. The estimated value of property in 1864 within the territory was \$5,482,521. There are five weekly papers published in the territory. This territory possesses great natural advantages, having a vast seaboard on the Pacific Ocean, the Straits of St. Juan de Fuca and adjacent waters. The Columbia River and its numerous tributaries

flow through the territory from the 49th to the 46th parallel of latitude.

The commerce of the people residing on the seaboard is principally confined to lumbering, fishing, and coal-mining. Large cargoes of spars, lumber, shingles, &c., are constantly shipped to San Francisco, the Sandwich Islands, South America, China, New Zealand, and ports in Europe. Large quantities of coal are shipped from Bellingham Bay, where a company, with a capital stock of \$1,000,000, is extensively engaged in mining. Oysters, salmon, and other varieties of fish, are also exported in large quantities. The Columbia River forms the line of division between the State of Oregon and Washington Territory. Passing along, in a northerly direction, the first place of importance on the seacoast of Washington Territory is Shoalwater Bay, a picturesque sheet of water which has the reputation of producing the finest flavored oysters on the coast. The country bordering the bay is very generally settled by men who unite with the occupation of farming the avocation of fishing. Large quantities of oysters are annually shipped from Shoalwater Bay to San Francisco, Sacramento, Portland, and other places on the Pacific coast. Large quantities of piles and spars are also shipped from this point, which, together with the shipment of about 80,000 bushels of oysters, make the value of the exports from this locality about \$120,000. This bay was discovered by Lieut. John Meares, in the *Felice*, July 5, 1788, and upon sounding for an entrance, discovered so many shoals that he gave it the name it at present bears. A lighthouse was erected on Cape Shoalwater, which was first illuminated on October 1st, 1858. The height of the tower is 41½ feet from the base, and 87 feet above the level of the sea. Oysterville and Brucefort are the names of the villages on the bay. Passing along the coast about thirteen miles further north is Gray's Harbor, a bay which was discovered by Gray in 1792, and named by him Bulfinch Harbor, after one of the owners of his vessel; but the present name was subsequently applied to it by Lieut. Whidby, who surveyed it in 1792, and called it Gray's Harbor, in compliment to its discoverer. This bay is extensively settled by enterprising people, who have erected lumber and flouring mills, and established a town near the point where the Chehalis River empties into the bay. Several smaller streams also empty into this bay. The Chehalis is navigable for boats for a distance of sixty miles, and drains the country well suited for agricultural purposes. North of Gray's Harbor are the Queniult, Raft, Queets, Ohahlata, Quilcuyata, and several smaller rivers emptying into the Pacific Ocean south of Cape Flattery, which forms the southern headland of that vast expanse of water known as the Straits of Juan de Fuca. The entrance to this strait is about fourteen miles wide, and the distance from the entrance to Whidby's Island, its eastern boundary, is eighty-four miles. The depth of water through-

out the strait may be inferred from the fact that the officers of the U. S. Coast Survey found no bottom in its deepest parts, even with 150 fathoms of line. Juan de Fuca Straits is the main artery for the waters of Admiralty Inlet, Puget Sound, Possession Sound, Hood's Canal, Canal de Haro, Rosario Strait, Bellingham Bay, and the vast Gulf of Georgia, extending between Vancouver's Island and New Caledonia for a distance of 120 miles, with an average width of 20. This strait was discovered in 1787, by Berkely, while in command of a boat's crew of the ship *Imperial Eagle*. In June, 1788, Berkely communicated the fact of its existence to Meares, who sent a party to explore it, and applied to the strait the name of "Juan de Fuca." Gray and Vancouver entered this strait in 1792, but to the latter the world is indebted for the first authentic account of its vast extent and numerous surroundings. Sailing along the Strait of Juan de Fuca, on the south—or Washington Territory—shore, Neah Harbor, Olallam Bay, Port Angeles, New Dungeness, and Port Townsend are passed, thence up Admiralty Inlet into Puget Sound, to Budd's Inlet, the head of which is located at Olympia, the capital of Washington Territory. From this point to the forty-ninth parallel of latitude—the dividing line between the United States and British possessions—a large number of bays, harbors, and ports, line the vast sheet of water extending the entire distance.

UTAH.—The estimated population of this territory in 1864 was 80,000. The number of counties in the territory is fourteen. The popular election is held on the first Monday in August, and the Legislature assembles on the second Monday in December. This body consists of a Council and House of Representatives. The former is composed of thirteen members, and the latter of twenty-six. The assessed property in the territory amounts to \$5,051,176. The Federal Governor is James D. Doty, and the Secretary Amos Reed. The Chief Justice is John Titus, and the Associates Charles R. Walte and Thomas J. Drake.

There is another organization in the territory known as the Mormon Church, or Church of Jesus Christ of Latter Day Saints, as follows:

First Presidency.—The first quorum of authority in the Church is the First Presidency, and is composed of three members, viz.: Brigham Young, Heber C. Kimball, Daniel H. Wells.

Twelve Apostles.—The next quorum in authority is the Twelve Apostles, viz.: Orson Hyde, Orson Pratt, John Taylor, Wilford Woodruff, George A. Smith, Amasa M. Lyman, Ezra T. Benson, Charles O. Rich, Lorenzo Snow, Erastus Snow, Franklin D. Richards, George Q. Cannon.

Seventies.—The next quorum in authority is the Seventies. The seventy members that constitute the first quorum of seventies, are all presidents of the first ten quorums of seventies, making seven presidents to each quorum; the

members of all the other quorums of seventies number sixty-three, each quorum having seven presidents. There are sixty-eight quorums of seventies organized in Utah Territory.

High Priests.—There is a quorum of High Priests, the numerical extent of which is not defined. This quorum has a president and two counsellors.

There are also quorums of Elders, Priests, Teachers, and Deacons.

The Seventies and High Priests in the various settlements in this territory have meetings, and are regulated by a local presidency, separate from, but subordinate to, the standing presidencies of their quorums.

John Smith (son of Hiram Smith) is presiding patriarch. There are several other patriarchs in the church.

High Council.—There is a High Council, composed of twelve members, organized at Great Salt Lake City, and in all the principal settlements of the territory.

Bishops.—The territory is divided into wards; over each ward is a bishop, with two counsellors. Great Salt Lake City is divided into twenty wards. Edward Hunter is the presiding bishop.

Membership.—In the territory, the numerical membership of the Church will nearly correspond with the population. Throughout the United States there are branches and members of the Church, but at present so unorganized that the number is not known.

There are organized branches and conferences of the Church throughout England, Scotland, Ireland, Wales, Denmark, Norway, Italy, Switzerland, Germany, and in other parts of the world.

In an address by Brigham Young, in Jan., 1865, he complains of the failure of Congress to admit Deseret into the Union as a State, and suggests that the territorial laws of Utah be declared to be the laws of the "State of Deseret." He further said:

The progress which is being made in the opening of coal mines, by which coal in increased quantities and of an improved quality is being brought into market; in the erection of handsome and substantial stores and public buildings, and commodious and elegant dwellings; in the production of staples and in the advancement of home manufactures of various kinds, is a cause of sincere congratulation. Machinery for the manufacture of woollen and cotton fabrics has been imported and put into successful operation, and I trust the day is not far distant when our importation of these articles will be comparatively limited.

The efforts of our citizens to produce cotton have been crowned with very encouraging success. There have been, and still are, many difficulties to be contended with and overcome before the raising of cotton can become as remunerative as the raising of cereals in more favorable localities; but the experience gained during the past few years by the citizens of the cotton-growing districts will be of incalculable benefit to them in their future operations. The recent accessions of strength which these settlements have received, have had an inspiring effect upon the old settlers there, and they feel that many of the difficulties under which they have heretofore labored are about to be overcome.

TEXAS. Agricultural labors in Texas were exceedingly prosperous in 1864. Large numbers of slaves had been brought into the State from Arkansas, and Mississippi, and Louisiana for safety, so that labor became abundant. The crop of cotton was estimated at five hundred thousand bales, thus exceeding the crop in all the other cotton-growing States, which was estimated at four hundred thousand bales. The crop of corn was estimated as sufficient to furnish a supply for two years.

The control of the Richmond Government over the people was in a great measure lost by the Federal occupation of the Mississippi River. The troops raised in Texas during the year remained west of the Mississippi, and took no part in the great campaigns in Georgia and Virginia. The rule of the secessionists was as severe as at any previous period, and those who were known to entertain Union sympathies experienced great suffering.

The military operations in the State were confined to some movements on the Western border, of little importance. Brownsville, opposite Matamoras, was opened to trade by a proclamation of the President, in February; but the Union forces were subsequently withdrawn.

In the latter part of the year the successes of the Federal troops in the East had produced an effect on the public mind; the Union sentiment became more open and avowed, and a disposition was manifested to make peace.

THOMSON, ROBERT DUNDAE, M. D., a Scottish chemist and professor, born in Scotland in 1811, died at Richmond August 17, 1864. He commenced his professional education at the Edinburgh University, and subsequently studied under the auspices of his uncle, Professor Thomas Thomson, at the University of Glasgow. On the completion of his course he was appointed assistant-surgeon in the navy of the East India Company, and as such he proceeded on a voyage to India and China. On his return he commenced the practise of his profession in London, where he continued about eight years, during which time he was instrumental in founding the Blenheim Free Dispensary, acting gratuitously as one of its physicians. At this time he conducted a monthly periodical entitled "Records of General Science," and also assisted in editing the "Annals of Medicine." On his marriage with the daughter of Prof. Thomas Thomson, he removed to Glasgow, and for a period of ten years assisted his uncle in the active duties of his professor's chair, delivering regularly the course of lectures. Subsequently he was appointed Professor of Chemistry in St. Thomas's Hospital, London. In 1856 he was appointed health officer of Marylebone, and afterwards, on being chosen member for chemistry in the council of the University of London, he resigned his professorship at St. Thomas's. Dr. Thomson was a voluminous writer on scientific subjects. He was for three years editor of the "British Annual;" published a book on

"Food for Cattle," also a "School Chemistry," and contributed largely to the Royal Society, of which he was a fellow, and to the Meteorological Society, of which he was president. His more elaborate work, the "Encyclopædia of Chemistry," which evinces enormous labor and research, is well known in the scientific world. His death was caused by a tumor of a malignant character, which ultimately prevented his taking nourishment.

TOTTEN, JOSEPH GILBERT, Brevet Major-General of the U. S. Army, and Chief of the Engineer Department, born in New Haven, Conn., Aug. 23, 1788, died at Washington, D. C., April 22, 1864. He graduated at West Point in 1805, as 2d lieutenant of engineers, and remained in the service until March, 1806, when he resigned and went into civil life, from which he again entered the army in 1808. Promoted to be a 1st lieutenant in 1810, and captain in 1812, he was Chief Engineer of the Army on the Niagara frontier in the campaign of 1812 and 1813. Brevetted as Major "for meritorious services," June, 1813, he became Chief Engineer of the Army on Lake Champlain in the campaign of 1814, and was brevetted Lieutenant-Colonel, September 11, 1814, "for gallant conduct at the battle of Plattsburgh." Passing through the successive grades of major and lieutenant-colonel in his own corps, he became Colonel and Chief Engineer, December 7, 1838. From 1816 to 1838, with but an intermission of two years, he was a member of the Board of Engineers for planning the national defences. During the Mexican war he served as chief engineer of the army under General Scott, until the capture of Vera Cruz, conducting the siege operations against that place, and was brevetted a brigadier-general "for gallant and meritorious conduct" on that occasion. Subsequently he resumed his duties as chief engineer, continuing in their performance with but two short intervals until his death. The fortifications of Newport, R. I., were built under his immediate supervision, and with other defences and fortifications are enduring monuments to his memory. In the first days of the rebellion Gen. Scott urged upon Gen. Totten the acceptance of the position of Commander-in-chief, which the latter declined on the ground of physical inability for field service. Gen. T., amid all his other labors, found time to translate and have published *Vicat on Mortars*, the work of one of the ablest of the French corps of civil engineers. During the period of twenty-six years in which Gen. Totten stood at the head of the engineer department, he discharged his varied duties with untiring devotion, spotless integrity, and signal ability, as an acknowledgment of which the President, upon hearing of his serious illness, forwarded his commission as brevet Major-General.

TURKEY. An Empire in Eastern Europe. The present ruler is Sultan Abdul-Aziz-Khan, born February 9th, 1830, the thirty-second sovereign of the family of Osman, and the

twenty-ninth since the capture of Constantinople; succeeded his brother Sultan Abdul-Medjid-Khan, June 25th, 1857. The heir apparent to the throne is not the oldest son of the reigning Sultan, but the oldest son of the deceased Sultan, Abdul-Medjid-Khan. The reigning Sultan is reported to have the intention to obtain the consent of the leading powers of Europe for a change in the law of succession.

The area and population of the empire is estimated as follows:

	Geographical square miles.	Population. in 1864.
Possessions in Africa.....	44,940	5,650,000
" " Asia.....	81,470	16,050,000
" " Europe.....	9,878	15,780,000
	64,288	37,480,000

The following estimate of the religious statistics is given by Kolb (*Handbuch der vergleichenden Statistik*, 1860):

	Europe.	Asia.	Total.
Mohammedans.....	4,550,000	12,650,000	31,000,000
Greeks and Armenians..	10,000,000	800,000	12,000,000
Catholics.....	640,000	280,000	900,000
Jews.....	70,000	80,000	150,000

The budget for 1864-'5 shows a revenue of £14,737,231. The expenditure is estimated at £14,571,238. The increase in the latter over that of last year is occasioned by the public debt and the Circassian immigration. A reduction in the army and navy expenses to the amount of £37,758 will be made.

The Turkish army consisted, during the Crimean war, of 105,325 nizam (active army), 103,827 redif (reserve), 7,741 militia; total, 216,898. The duration of military service is five years in the active army, and seven years in the reserve. An order of the Turkish Government, issued in January, 1864, grants leave of absence, during six months of the year, to all soldiers who have served a sufficient time to acquire the experience and practice necessary for military duties. An important saving—which forms one of the temporary economies promised in the report on the budget—will thus be effected. Better men will be secured for the army, now that the soldiers will be able for some months in the year to enjoy the comforts of home. The suspension of the conscription is a corollary to the regulation. The order provides that all soldiers and non-commissioned officers who, after having attained the necessary degree of skill in their military drill and instruction, may desire to spend the winter season in their homes, shall be permitted to leave their regiments during that period of the year in which the rigors of the season prevent the practice of military exercise.

The press in Turkey has been hitherto comparatively free; but an edict, issued in December, 1864, greatly restricts this freedom. The following are the chief provisions of the new law:

"Arts. 1, 2, and 3 provide that every paper must be authorized by the Government—the name of the responsible editor printed on every issue—that, if a native, he must be over thirty years of age; and if a foreigner, he must agree to submit to Turkish jurisdiction.

"Art. 8 provides that when any person is mentioned by name in a paper he must be allowed an opportunity to reply in the same paper, occupying not more than the space taken by the original article.

"Art. 9 prohibits the entrance into the empire of any foreign publications hostile to the Turkish Government.

"The remaining twenty-six articles comprise its penal provisions, which are such as the following:

"Art. 14 punishes every offence against 'public morality, good manners, or any one of the religions or creeds professed in the empire,' with a fine of from \$15 to \$100, or with imprisonment of from one week to three months.

"Art. 17 protects 'friendly and allied sovereigns' against attack by a penalty of imprisonment of from three months to three years, or a fine of from \$50 to \$500. Every other imaginable class is protected by similar provisions.

"Art. 26 forbids the publication or reproduction 'intentionally and in bad faith' of false news, and of fabricated or false documents, under penalty of from a month to a year's imprisonment, or a fine of from \$50 to \$250. Prosecutions may take place at any time within six months.

"Art. 33 provides for the doubling of all penalties in case of a repetition of the offence."

In July, 1864, the Turkish Government closed all the Protestant missionary establishments, and arrested several converts to Protestantism. In consequence of the remonstrances of the representatives of the United States and other Protestant countries it permitted, however, after a few days the reopening of the Bible and the American missionary societies. In August all the missionary stations were reopened, but the converts in the capital were for the present to be sent to the provinces. The continuance of religious controversy in the Protestant books was also authorized, provided that the Koran was not insulted.

No part of the Turkish Empire has attracted for several years so much attention as the United Danubian principalities (formerly Moldavia and Wallachia). In virtue of the treaty of Paris of March 30th, 1856, and of the convention of August 19th, 1858, each of the two principalities, contrary to the wish expressed by the people, was to have its own prince, a distinct assembly and a distinct administration. The germ of a future union was, however, laid in the appointment of a joint commission which was to prepare a legislative union. When, however, both provinces elected the same prince, Colonel Alexandre Couza, a

conference of representatives of the great powers, held at Paris, September 6th, 1859, confirmed this double election. The Ottoman Porte reluctantly yielded to the popular demand by sanctioning the legislative and administrative union of the two principalities, on December 4th, 1861. The first united assembly of the principalities met at Bucharest, on February 5th, 1862. Although the Porte had given its consent only to a union for the lifetime of the reigning prince, the latter, in his opening discourse, spoke of a definite union. The address of the assembly expressed in emphatic terms the same sentiments. In this cause all the people of the two principalities appeared to be unanimous. The same was the case with regard to the secularization of the property belonging to the Greek convents, which on December 14th, 1868, was adopted by the assembly by a vote of ninety-seven against three, and notwithstanding the protest of the Porte, in conjunction with the Cabinets of London, St. Petersburg, Vienna, and Berlin, confirmed by a unanimous vote on January 14th, 1864. On January 27th the assembly voted an indemnity of 50,000,000 francs to be paid to the religious communities of the Holy Places, this indemnity to be covered by a loan to be issued at 88, and bearing 7 per cent. interest.

Concerning many other questions, there was manifested, however, an irrevocable difference of opinion between the assembly which represented chiefly the aristocracy and the prince, who was determined to introduce into the administration of the country sweeping reforms. On April 24th the Chamber of Deputies passed a resolution that in future the Ministers should take the oath of allegiance to the people and not to the prince. On April 25th it passed a vote of censure upon the Government for the introduction of a rural bill rendering all the peasants landed proprietors.

Public opinion sided, however, with the prince against the assembly, and the vote of censure passed by the latter was very emphatically disapproved by the people. A message from the prince, announcing the prorogation of the Chambers until the 14th of May, was likewise enthusiastically applauded by the people. When the Chambers met again, on May 14th, and refused to adopt a new (liberal) electoral law submitted to them, the prince again dissolved them, and promulgated a statute supplementary of the fundamental law of the State (convention of August 19th, 1858), and a new electoral law. Both of these were submitted by him to a general ballot, which resulted in the adoption of the new constitution by a vote of 688,928 for and 1,807 against. There were, altogether, 766,905 persons entitled to vote. According to the new constitution, the Moldo Wallachian Chamber is to be composed

of 160 members—eighty-five for Wallachia, and seventy-five for Moldavia. Out of the above number the fifty-six towns of the two principalities will send ninety-one deputies, whilst the rural communes, although more numerous, and possessing a more extensive territory, will only be represented by sixty-nine. In consequence of new remonstrances from the Ottoman Porte and the great European powers, Prince Couza, after having personally negotiated with the Turkish Government at Constantinople, consented to modify the new constitution by forming a senate which will be partly nominated by the prince and partly selected by the people.

While the new constitution was submitted to the vote of the people, a conspiracy was discovered at Bucharest to overthrow the Government of Prince Couza, and effect the separation of the principalities, with a return to the former *regime*. The contents of the papers seized on the person of Dr. Lamberti, showed the connivance of foreign enemies of the prince. Dr. Lamberti was arrested with Prince Soutoz, formerly minister under Shirby. The prisoner confessed his guilt, and acknowledged the authenticity of the documents signed by himself, and by the other persons compromised in the affair. Simultaneously, another reactionary conspiracy was discovered at Jassy. Deputy Balsch was arrested, and the papers of a so-called national committee were seized. This discovery excited a great indignation among the people, and had a considerable influence on the result of the election.

The important rural law, which abolished compulsory labor, and made the peasants landed proprietors by the payment of an indemnity to the landowners, was promulgated on Aug. 27th, and received throughout the country with immense enthusiasm. The law divides the peasants into three classes proportionately to the number of cattle they possess. They will respectively receive about 14-8 or 4 acres of land in Wallachia, 16-12 or 6 acres in Moldavia, and 18-12 or 8 acres in Bessarabia, according to the class to which they belong.

Elections for the General Councils (Provincial Diets) were held in November, and were very favorable to the Government. All the Councils Generals sent addresses of congratulation to Prince Couza; two of them also voted the necessary funds for erection of statues of the prince; four, provincial colleges to bear his name, and ten others, monuments to be erected in his honor.

The elections for the Chambers in December, were equally favorable to the Government. They were opened by the prince on Dec. 18th, in the presence of the diplomatic corps and the great bodies of the State. The message delivered by the prince was greatly applauded.

U

UNITED STATES. The benefits of the amnesty proclamation issued by President Lincoln on December 8th, 1863, were sought by a large number of persons, originally from the South, who were within the Federal lines, and against whom suspicion of sympathy or secret coöperation with the seceders existed. Others whose property had been seized for confiscation, complied with the terms of the proclamation in order to save their property. Others, who were in confinement, sought to obtain a release by a simple compliance with its terms. Indeed, so various were the cases which arose, that an explanation or limitation of its terms was required. For this purpose the President, on March 28th, issued the following proclamation:

Whereas, It has become necessary to define the cases in which insurgent enemies are entitled to the benefits of the Proclamation of the President of the United States, which was made on the eighth day of December, 1863, and the manner in which they shall proceed to avail themselves of these benefits:

And whereas the objects of that Proclamation were to suppress the insurrection and to restore the authority of the United States; and whereas the amnesty therein proposed by the President was offered with reference to these objects alone:

Now, therefore, I, ABRAHAM LINCOLN, President of the United States, do hereby proclaim and declare that the said Proclamation does not apply to the cases of persons who, at the time when they seek to obtain the benefits thereof by taking the oath thereby prescribed, are in military, naval, or civil confinement or custody, or under bonds or on parole of the civil, military, or naval authorities, or agents of the United States as prisoners of war, or persons detained for offenses of any kind, either before or after conviction; and that, on the contrary, it does apply only to those persons who, being yet at large and free from any arrest, confinement, or duress, shall voluntarily come forward and take the said oath with the purpose of restoring peace and establishing the national authority. Prisoners excluded from the amnesty offered in the said Proclamation may apply to the President for clemency, like all other offenders, and their applications will receive due consideration.

I do further declare and proclaim that the oath prescribed in the aforesaid Proclamation of the 8th of December, 1863, may be taken and subscribed before any commissioned officer, civil, military, or naval, in the service of the United States, or any civil or military officer of a State or Territory not in insurrection, who by the laws thereof may be qualified for administering oaths. All officers who receive such oaths are hereby authorized to give certificates thereon to the persons respectively by whom they are made. And such officers are hereby required to transmit the original records of such oaths at an early day as may be convenient to the Department of State, where they will be deposited and remain in the archives of the Government. The Secretary of State will keep a register thereof, and will, on application, in proper cases, issue certificates

of such records in the customary form of official certificates.

In testimony whereof, I have hereunto set my hand, and caused the seal of the United States to be affixed.

Done at the city of Washington, the twenty-sixth day of March, in the year of our Lord one thousand eight hundred and sixty-four, and of the Independence of the United States the eighty-eighth.

ABRAHAM LINCOLN.

By the President:

WILLIAM H. SEWARD, Secretary of State.

Some efforts were made to circulate the proclamation within the enemy's lines, but it received very little consideration there. In East Tennessee, Gen. Foster attempted to circulate it in the form of handbills among the troops of Gen. Longstreet, with the hope of inducing them to desert. The latter, in a letter to Gen. Foster, said:

The immediate object of this circulation seems to be to induce our soldiers to quit our ranks and take the oath of allegiance to the United States Government. I presume, however, that the great object and end in view is to hasten the day of peace. I respectfully suggest for your consideration the propriety of communicating any views that your Government may have upon this subject through me, rather than by handbills circulated amongst our soldiers.

The few men who may desert under the promise held out in the proclamation cannot be men of character or standing. If they desert their cause they disgrace themselves in the eyes of God and of man. They can do your cause no good, nor can they injure ours.

As a great action you can accept none but an honorable peace. As a noble people you could have us accept nothing less.

I submit, therefore, whether the mode that I suggest would not be more likely to lead to an honorable and than such a circulation of a partial promise of pardon.

Twenty copies were sent to Gen. Longstreet by Gen. Foster, with acknowledgment of the letter.

The original proclamation excepted from its benefits the State of Virginia. The number of persons which it required to inaugurate a new State was one-tenth of the persons who voted at the Presidential election in 1860, as follows:

Virginia had already been reconstructed

under the organizations of West Virginia and East Virginia. South Carolina is omitted in the list, as the Presidential vote was cast by the State Legislature. The operation of this provision of the original proclamation is stated in the articles ARKANSAS, FLORIDA, LOUISIANA, TENNESSEE. This provision of the proclamation was also much discussed in Congress, for which see CONGRESS, U. S.

The relations between President Lincoln and Lieut.-Gen. Grant were of a most friendly nature, as is shown by the following correspondence after the latter assumed the duties of his office:

EXECUTIVE MANSION, WASHINGTON, April 30, 1864.

Lieut.-Gen. Grant :—Not expecting to see you before the spring campaign opens, I wish to express in this way my entire satisfaction with what you have done up to this time, so far as I understand it. The particulars of your plan I neither know nor seek to know. You are vigilant and self-reliant, and pleased with this, I wish not to obtrude any restraints or constraints upon you. While I am very anxious that any great disaster or capture of our men may be avoided, I know that these points are less likely to escape your attention than they would be mine. If there be any thing wanting which is within my power to give, do not let me fail to know it. And now with a brave army and a just cause, may God sustain you. Yours, very truly, A. LINCOLN.

HEADQUARTERS ARMY OF THE U. S. }
OUTPOST C. H. VA., May 1, 1864. }

Mr. President :—Your very kind letter of yesterday is just received. The confidence you express for the future, and satisfaction for the past in my military administration, is acknowledged with pride. It shall be my earnest endeavor that you and the country shall not be disappointed. From my first entry into the volunteer service of the country to the present day, I have never had cause of complaint, and have never expressed or implied a complaint against the Administration or the Secretary of War for throwing any embarrassment in the way of my vigorously prosecuting what appeared to be my duty. Indeed, since the promotion which placed me in command of all the armies, and in view of the great responsibility and importance of success, I have been astonished at the readiness with which every thing asked for has been yielded without even an explanation being asked. Should my success be less than I desire and expect, the least I can say is the fault is not with you.

Very truly, your obedient servant,
U. S. GRANT, Lieut.-Gen.

The following letter, written one month later, also expresses similar sentiments:

EX. MANSION, WASHINGTON, June 3, 1864.

Hon. A. Contling and others :

GENTLEMEN: Your letter inviting me to be present at a mass meeting of loyal citizens to be held in New York on the 4th inst., for the purpose of expressing gratitude to Lieut.-Gen. Grant for his signal services, was received yesterday.

It is impossible for me to attend. I approve, nevertheless, of whatever may tend to strengthen Gen. Grant and the noble armies now under his direction. My previous high estimation of Gen. Grant has been maintained and heightened by what has occurred in the remarkable campaign he is now conducting, while the magnitude and difficulty of the task before him does not prove less than I expected. He and his brave soldiers are now in the midst of their great trial, and I trust that at your meeting you will so shape your good words that they may turn to men and guns moving to his support.

Yours truly, ABRAHAM LINCOLN.

A weariness of the war, or a laudable desire to put an end to the appalling horrors of the conflict, awakened in the mass of the people, on both sides, a strong wish for peace. So prevalent was this wish, that even unofficial individuals were tempted to undertake the preparation of the preliminaries. The President appears kindly to have indulged these inclinations, although they resulted in showing that neither side were willing to make any concession merely for the sake of peace.

The first of these movements, in point of time, consisted in a visit of Rev. Col. Jacques and Mr. J. R. Gilmore to Richmond, in which two interviews were had with Mr. Davis. The visit resulted in nothing, and the President appears to have taken no part in the matter further than to approve of their passage through the Federal lines, although the terms suggested in the conversations are the same as the President has advanced on every subsequent occasion. The following letter explains the manner in which a passage into the enemy's lines was obtained:

HEADQUARTERS ARMY OF THE UNITED STATES, }
ORTY POINT, VA., July 3, 1864. }

Gen. R. E. Lee, Commanding Confederate Forces near Petersburg, Va.

GENERAL: I would request that Col. James F. Jacques, 78d Illinois volunteer infantry, and J. R. Gilmore, Esq., be allowed to meet Col. Robert Ould, commissioner for the exchange of prisoners, at such place between the lines of the two armies as you may designate. The object of the meeting is legitimate with the duties of Col. Ould as commissioner. If not consistent for you to grant the request here asked, I would beg that this be referred to President Davis for his action.

Requesting as early an answer to this communication as you may find it convenient to make, I subscribe myself, very respectfully, your obedient servant,
U. S. GRANT, Lieut.-Gen. U. S. A.

The following note opened the way for an interview with Mr. Davis:

SPOTTISWOOD HOTEL, RICHMOND, VA., July 17, 1864.

Hon. J. P. Benjamin, Secretary of State, U. S. A.

DEAR SIR: The undersigned, James F. Jacques of Illinois, and James R. Gilmore, of Massachusetts, most respectfully solicit an interview with President Davis. They visit Richmond as private citizens, and have no official character or authority; but they are fully possessed of the views of the United States Government relative to an adjustment of the differences now existing between the North and South, and have little doubt that a free interchange of views between President Davis and themselves would open the way to such official negotiations as would ultimately in restoring peace to the two sections of our distracted country.

They therefore ask an interview with the President, and awaiting your reply, are, most truly and respectfully, your obedient servants, JAS. F. JACQUES,
JAS. R. GILMORE.

Mr. Gilmore states the conversation between himself and Mr. Davis thus:

Gilmore—Well, sir, be that as it may, if I understand you, the dispute between your Government and ours is narrowed down to this, Union or disunion?

Davis—Yes, or to put it in other words, independence or subjugation.

Gilmore—Then the two Governments are irreconcilably apart. They have no alternative but to fight it out. But it is not so with the people. They are

tired of fighting, and want peace; and as they bear all the burden and suffering of the war, is it not right they should have peace, and have it on such terms as they like?

Davis—I don't understand you; be a little more explicit.

Gilmore—Well, suppose the two Governments should agree to something like this: To go to the people with two propositions: say, peace with disunion and Southern independence, as your proposition—and peace, with union, emancipation, no confiscation, and universal amnesty, as ours. Let the citizens of all the United States (as they existed before the war) vote "yes" or "no" on these two propositions, at a special election within sixty days. If a majority votes disunion, our Government to be bound by it, and to let you go in peace. If a majority votes Union, yours to be bound by it and to stay in peace. The two Governments can contract in this way, and the people, though constitutionally unable to decide on peace or war, can elect which of the two propositions shall govern their rulers. Let Lee and Grant, meanwhile, agree to an armistice. This would sheathe the sword; and, if once sheathed, it would never again be drawn by this generation.

Davis—The plan is altogether impracticable. If the South were only one State, it might work; but as it is, if one Southern State objected to emancipation it would nullify the whole thing; for you are aware the people of Virginia cannot vote slavery out of South Carolina, nor the people of South Carolina vote it out of Virginia.

Gilmore—But three-fourths of the States can amend the Constitution. Let it be done in that way; in any way so that it be done by the people. I am not a statesman or a politician, and I do not know just how such a plan could be carried out; but you get the idea—that the people shall decide the question.

Davis—That the majority shall decide it, you mean. We seceded to rid ourselves of the rule of the majority, and this would subject us to it again.

Gilmore—But the majority must rule finally, either with bullets or ballots.

Davis—I am not so sure of that. Neither current events nor history shows that the majority rules, or ever did rule. The contrary, I think, is true. Why, sir, the man who should go before the Southern people with such a proposition, with any proposition which implied that the North was to have a voice in determining the domestic relations of the South, could not live here a day. He would be hanged to the first tree, without judge or jury.

Mr. Benjamin, Secretary of State, in an official letter to James M. Mason, commissioner in Europe, says:

Mr. Gilmore then addressed the President, and in a few minutes had conveyed the information that these two gentlemen had come to Richmond impressed with the idea that this Government would accept a peace on a basis of a reconstruction of the Union, the abolition of slavery, and the grant of an amnesty to the people of the States as repentant criminals. In order to accomplish the abolition of slavery, it was proposed that there should be a general vote of all the people of both federations, in mass, and the majority of the vote thus taken was to determine that as well as all other disputed questions. These were stated to be Mr. Lincoln's views.

The President answered, that as these proposals had been prefaced by the remark that the people of the North were a majority, and that a majority ought to govern, the offer was, in effect, a proposal that the Confederate States should surrender at discretion, admit that they had been wrong from the beginning of the contest, submit to the mercy of their enemies, and avow themselves to be in need of pardon for their crimes; that extermination was preferable to dishonor. He stated that if they were themselves so

unacquainted with the form of their own Government as to make such propositions, Mr. Lincoln ought to have known, when giving them his views, that it was out of the power of the Confederate Government to act on the subject of the domestic institutions of the several States, each State having exclusive jurisdiction on that point, still less to commit the decision of such a question to the vote of a foreign people.

The next attempt to prepare the way for negotiations was of a semi-official character, and resulted in a clear statement by the President of his terms of settlement so indefinitely brought out in the preceding conversation. Mr. Horace Greeley, who was the active participant on the Union side, thus relates the origin of the correspondence which took place:

Some time since it was announced by telegraph from Halifax that Messrs. C. C. Clay, of Alabama, Jacob Thompson, of Mississippi (ex-United States Senators), Professor J. P. Holcombe, of the University of Virginia, and George N. Sanders, of Kentucky, had reached that city from Dixie *via* Bermuda, on important business, and all of those but Mr. Thompson (who is in Toronto) were soon quartered at the Clifton, on the Canada side of Niagara Falls. I heard soon after of confidential interviews between some or all of those gentlemen and leading Democrats from our own and neighboring States, and there were telegraphic whispers of overtures for reconstruction, and conditions were set forth as those on which the Confederates would consent to reunion. (I cannot say that any of these reports were authentic.) At length, after several less direct intimations, I received a private letter from Mr. Sanders, stating that Messrs. Clay, Holcombe, himself, and another, desired to visit Washington, upon complete and unqualified protection being given by the President or the Secretary of War.

As I saw no reason why the opposition should be the sole recipients of these gentlemen's overtures, if such there were (and it is stated that Mr. Clay aforesaid is preparing or to prepare an important letter to the Chicago Convention), I wrote the President, urging him to invite the rebel gentlemen aforesaid to Washington, there to open their budget. I stated expressly that I knew not what they would propose if so invited; but I could imagine no offer that might be made by them which would not conduce, in one way or another, to a restoration of the integrity and just authority of the Union.

The President ultimately acquiesced in this view so far as to consent that the rebel agents should visit Washington, but directed that I should proceed to Niagara, and accompany them thence to the capital. This service I most reluctantly undertook, feeling deeply and observing that almost any one else might better have been sent on this errand. But time seemed precious, and I immediately started.

The correspondence was as follows:

Mr. Sanders to Mr. Greeley.

[Private and confidential.]

CLIFTON HOUSE, NIAGARA FALLS, C. W. }
July 12, 1864.

SIR: I am authorized to say that Hon. Clement C. Clay, of Alabama, Professor James P. Holcombe, of Virginia, and George N. Sanders, of Dixie, are ready and willing to go at once to Washington, upon complete and unqualified protection being given, either by the President or Secretary of War. Let the permission include the three names and one other.

Very respectfully, GEORGE N. SANDERS.
To Hon. HORACE GREELEY.

Mr. Greeley's Reply.

NIAGARA FALLS, N. Y., July 17, 1864.

GENTLEMEN: I am informed that you are duly accredited from Richmond as the bearers of propo-

sitions looking to the establishment of peace; that you desire to visit Washington in the fulfilment of your mission, and that you further desire that Mr. George N. Sanders shall accompany you. If my information be thus far substantially correct, I am authorized by the President of the United States to tender you his safe conduct on the journey proposed, and to accompany you at the earliest time that will be agreeable to you.

I have the honor to be, gentlemen, yours,
HORACE GREELEY.

To Messrs. CLEMENT C. CLAY, JACOB THOMPSON,
JAMES P. HOLCOMBE, Clifton House, C. W.

Messrs. Holcombe and Clay to Mr. Greeley.

CLIFTON HOUSE, NIAGARA FALLS, July 18, 1864.

SIR: We have the honor to acknowledge your favor of the 17th inst., which would have been answered on yesterday but for the absence of Mr. Clay. The safe conduct of the President of the United States has been tendered us, we regret to state, under some misapprehension of facts. We have not been accredited to him from Richmond as the bearers of propositions looking to the establishment of peace. We are, however, in the confidential employment of our Government, and are entirely familiar with its wishes and opinions on that subject; and we feel authorized to declare that, if the circumstances disclosed in this correspondence were communicated to Richmond, we would be at once invested with the authority to which your letter refers; or other gentlemen, clothed with full powers, would be immediately sent to Washington with the view of hastening a consummation so much to be desired, and terminating at the earliest possible moment the calamities of the war. We respectfully solicit, through your intervention, a safe conduct to Washington, and thence by any route which may be designated, through your lines to Richmond. We would be gratified if Mr. George N. Sanders was embraced in this privilege.

Permit us, in conclusion, to acknowledge our obligations to you for the interest you have manifested in the furtherance of our wishes, and to express the hope that in any event you will afford us the opportunity of tendering them in person before you leave the Falls. We remain, very respectfully, &c.,

C. C. CLAY, JR.
J. P. HOLCOMBE.

P. S.—It is proper to add that Mr. Thompson is not here, and has not been staying with us since our sojourn in Canada.

Mr. Greeley's Reply.

INTERNATIONAL HOTEL,
NIAGARA, N. Y., July 18, 1864.

GENTLEMEN: I have the honor to acknowledge the receipt of yours of this date by the hand of Mr. W. C. Jewett. The state of facts therein presented being materially different from that which was understood to exist by the President when he entrusted me with the safe conduct required, it seems to me on every account advisable that I should communicate with him by telegraph, and solicit fresh instructions, which I shall at once proceed to do. I hope to be able to transmit the result this afternoon; and at all events I shall do so at the earliest moment. Yours, truly,

HORACE GREELEY.

To Messrs. CLEMENT C. CLAY and JAMES P. HOLCOMBE, Clifton House, C. W.

Messrs. Clay and Holcombe to Mr. Greeley.

CLIFTON HOUSE, NIAGARA FALLS, July 18, 1864.

To Hon. H. GREELEY, Niagara Falls, N. Y.:

SIR: We have the honor to acknowledge the receipt of your note of this date by the hands of Col. Jewett, and will await the further answer which you purpose to send to us. We are, very respectfully, &c.,

C. C. CLAY, JR.
JAMES P. HOLCOMBE.

Mr. Greeley to Messrs. Clay and Holcombe.

INTERNATIONAL HOTEL,
NIAGARA FALLS, N. Y., July 19, 1864.

GENTLEMEN: At a late hour last evening (too late for communication with you) I received a despatch informing me that further instructions left Washington last evening, which must reach me, if there be no interruption, at noon to-morrow. Should you decide to await their arrival, I feel confident that they will enable me to answer definitely your note of yesterday morning. Regretting a delay which I am sure you will regard as unavoidable on my part, I remain, yours truly,

HORACE GREELEY.

To Hon. Messrs. C. C. CLAY, JR., and J. P. HOLCOMBE, Clifton House, Niagara, C. W.

Messrs. Holcombe and Clay to Mr. Greeley.

CLIFTON HOUSE, NIAGARA FALLS, July 19, 1864.

SIR: Col. Jewett has just handed us your note of this date, in which you state that further instructions from Washington will reach you by noon to-morrow if there be no interruption. One or possibly both of us may be obliged to leave the Falls to-day, but will return in time to receive the communication which you promise to-morrow. We remain truly yours, &c.,

JAMES P. HOLCOMBE,
C. C. CLAY, JR.

To Hon. HORACE GREELEY, now at International Hotel.

The despatch which Mr. Greeley received from Washington, he thus explains: "Not feeling at liberty to concede this, I telegraphed to Washington for further instructions, and was duly informed that Major Hay, the President's private secretary, would soon be on his way to me. He reached the Falls on the 20th, and we crossed over to the Clifton, where Major Hay, after mutual introductions, handed Professor Holcombe the following paper, in the handwriting of the President:

EXECUTIVE MANSION, WASHINGTON, July 18, 1864.

To whom it may concern:

Any proposition which embraces the restoration of peace, the integrity of the whole Union, and the abandonment of slavery, and which comes by and with an authority that can control the armies now at war against the United States, will be received and considered by the Executive Government of the United States, and will be met by liberal terms on other substantial and collateral points; and the bearer thereof shall have safe conduct both ways.

ABRAHAM LINCOLN.

"I left the Falls by the next train, leaving Major Hay to receive any response to the President's proffer, should any be made, but there was none."

Note from Major Hay to Mr. Holcombe.

INTERNATIONAL HOTEL, Wednesday, July 20th.

Major Hay would respectfully inquire whether Professor Holcombe and the gentlemen associated with him desire to send to Washington by Major Hay any messages in reference to the communication delivered to him on yesterday, and in that case when he may expect to be favored with such messages.

Note from Mr. Holcombe to Major Hay.

CLIFTON HOUSE, NIAGARA FALLS,
Thursday, July 21, 1864.

Mr. Holcombe presents his compliments to Major Hay, and greatly regrets if his return to Washington has been delayed by any expectation of an answer to the communication which Mr. Holcombe received from him on yesterday, to be delivered to the President of the United States. That communication was accepted as the response to a letter of Messrs. Clay

and Holcombe to the Hon. H. Greeley, and to that gentleman an answer has been transmitted.

Messrs. Holcombe and Clay to Mr. Greeley.

CLIFTON HOUSE, NIAGARA FALLS, }
July 31, 1864. }

To Hon. Horace Greeley:

Sir: The paper handed to Mr. Holcombe on yesterday in your presence by Major Hay, Assistant Adjutant-General, as an answer to the application in our note of the 18th inst., is couched in the following terms:

EXECUTIVE MANSION, WASHINGTON, D. C. }
July 18th, 1864. }

To whom it may concern:

Any proposition which embraces the restoration of peace, the integrity of the whole Union, and the abandonment of slavery, and which comes by and with an authority that can control the armies now at war against the United States, will be received and considered by the Executive Government of the United States, and will be met by liberal terms on other substantial and collateral points, and the bearer or bearers thereof shall have safe conduct both ways.

ABRAHAM LINCOLN.

The application to which we refer was elicited by your letter of the 17th instant, in which you inform Mr. Jacob Thompson and ourselves that you were authorized by the President of the United States to tender us his safe conduct, on the hypothesis that we were "duly accredited from Richmond as bearers of propositions looking to the establishment of peace," and desired a visit to Washington in the fulfilment of this mission. This assertion, to which we then gave, and still do, entire credence, was accepted by us as the evidence of an unexpected but most gratifying change in the policy of the President—a change which we felt authorized to hope might terminate in the conclusion of a peace mutually just, honorable, and advantageous to the North and to the South, exacting no condition but that we should be "duly accredited from Richmond as bearers of propositions looking to the establishment of peace."

Thus proffering a basis for conference as comprehensive as we could desire, it seemed to us that the President opened a door which had previously been closed against the Confederate States for a full interchange of sentiments, free discussion of conflicting opinions, and untrammelled effort to remove all causes of controversy by liberal negotiations. We, indeed, could not claim the benefit of a safe conduct which had been extended to us in a character we had no right to assume and had never affected to possess; but the uniform declarations of our Executive and Congress, and their thrice repeated and as often repulsed attempts to open negotiations, furnish a sufficient pledge that this conciliatory manifestation on the part of the President of the United States would be met by them in a temper of equal magnanimity. We had, therefore, no hesitation in declaring that if this correspondence was communicated to the President of the Confederate States he would promptly embrace the opportunity presented for seeking a peaceful solution of this unhappy strife.

We feel confident that you must share our profound regret that the spirit which dictated the first step toward peace had not continued to animate the counsels of your President. Had the representatives of the two Governments met to consider this question—the most momentous ever submitted to human statesmanship—in a temper of becoming moderation and equity, followed as their deliberations would have been by the prayers and benedictions of every patriot and Christian on the habitable globe, who is there so bold as to say that the frightful waste of individual happiness and public prosperity which is daily saddening the universal heart might not have been terminated, or if the desolation and carnage of war must still be endured through weary years of blood and suffering, that there might not at least have been infused into its conduct something more of the spirit which softens and partially redeems its brutalities?

Instead of the safe conduct which we solicited, and

which your first letter gave us every reason to suppose would be extended for the purpose of initiating a negotiation in which neither Government would compromise its rights or its dignity, a document has been presented which provokes as much indignation as surprise. It bears no feature of resemblance to that which was originally offered, and is unlike any paper which ever before emanated from the constitutional executive of a free people. Addressed "To whom it may concern," it precludes negotiation, and prescribes in advance the terms and conditions of peace. It returns to the original policy of "no bargaining, no negotiations, no truces with rebels, except to bury their dead, until every man shall have laid down his arms, submitted to the Government, and sued for mercy."

What may be the explanation of this sudden and entire change in the views of the President, of this rude withdrawal of a courteous overture for negotiation at the moment it was likely to be accepted, of this emphatic recall of words of peace just uttered, and fresh blasts of war to the bitter end, we leave for the speculation of those who have the means or inclination to penetrate the mysteries of his Cabinet, or fathom the caprice of his imperial will. It is enough for us to say that we have no use whatever for the paper which has been placed in our hands. We could not transmit it to the President of the Confederate States without offering him an indignity, dishonoring ourselves, and incurring the well-merited scorn of our countrymen.

Whilst an ardent desire for peace pervades the people of the Confederate States, we rejoice to believe that there are few, if any, among them who would purchase it at the expense of liberty, honor, and self-respect. If it can be secured only by their submission to terms of conquest, the generation is yet unborn which will witness its restitution. If there be any military autocrat in the North who is entitled to proffer the conditions of this manifesto, there is none in the South authorized to entertain them. Those who control our armies are the servants of the people, not their masters; and they have no more inclination than they have right to subvert the social institutions of the sovereign States, to overthrow their established constitutions, and to barter away their priceless heritage of self-government.

This correspondence will not, however, we trust, prove wholly barren of good results.

If there is any citizen of the Confederate States who has clung to a hope that peace was possible with this administration of the Federal Government it will strip from his eyes the last film of such delusion; or if there be any whose hearts have grown faint under the suffering and agony of this bloody struggle, it will inspire them with fresh energy to endure and brave whatever may yet be requisite to preserve to themselves and their children all that gives dignity and value to life or hope, and consolation to death. And if there be any patriots or Christians in your land who shrink appalled from the illimitable virtue of private misery and public calamity which stretches before them, we pray that in their bosoms a resolution may be quickened to recall the abused authority and vindicate the outraged civilization of their country.

For the solicitude you have manifested to inaugurate a movement which contemplates results the most noble and humane, we return our sincere thanks, and are, most respectfully and truly, your obedient servants,

C. C. CLAY, JR.

JAMES P. HOLCOMBE.

Messrs. Clay and Holcombe to Wm. C. Jewett.

CLIFTON HOUSE, NIAGARA FALLS, July 30, 1864.
Col. W. C. Jewett, Cataract House, Niagara Falls:

Sir: We are in receipt of your note admonishing us of the departure of Hon. Horace Greeley from the Falls, that he regrets the sad termination of the initiatory steps taken for peace in consequence of the change made by the President in his instructions to

convey commissioners to Washington for negotiations unconditionally, and that Mr. Greeley will be pleased to receive any answer we may have to make through you. We avail ourselves of this offer to enclose a letter to Mr. Greeley, which you will oblige us by delivering. We cannot take leave of you without expressing our thanks for your courtesy and kind offices as the intermediary through whom our correspondence with Mr. Greeley has been conducted, and assuring you that we are, very respectfully, your obedient servant,

C. C. CLAY, JR.
JAMES P. HOLCOMBE.

Mr. Greeley to Mr. Jewett.

INTERNATIONAL HOTEL, NIAGARA FALLS, July 30, 1864.

In leaving the Falls I feel bound to state that I have had no intercourse with the Confederate gentlemen at the Clifton House but such as I was fully authorized to hold by the President of the United States, and that I have done nothing in the premises but in fulfillment of his injunctions. The notes, therefore, which you have interchanged between those gentlemen and myself, can in no case subject you to the imputation of unauthorized dealing with public enemies.

HORACE GREELEY.

To W. C. JEWETT, Esq.

No further attempts to open negotiations were made until December 28th, when the President and Secretary Seward met Commissioners from Richmond at Fortress Monroe. For the details of this negotiation, see PUBLIC DOCUMENTS.

Early in the year there was much division of opinion among the people relative to the person for the next President, and the principles he should represent. The friends of the Secretary of the Treasury, Mr. Chase, early brought forward his name as a candidate. But the Legislature of Ohio indicating a preference for Mr. Lincoln, a letter was written by Mr. Chase, on March 15th, withdrawing his name. He said:

WASHINGTON, March 8, 1864.

MY DEAR SIR: In reply to a friendly letter from you, I wrote you briefly not long ago about the wishes expressed by many, that my name might be favorably regarded by the people in their next choice of a President, and closed by saying, that should our friends in Ohio manifest a preference for another, I should accept their decision with the ready acquiescence due from one who has been already trusted and honored by them beyond merits or expectation. The recent action of the Union members of our Legislature indicates such a preference. It becomes my duty, therefore, and I count it more a privilege than a duty to ask that no further consideration be given to my name.

It was never more important than now that all our efforts and energies should be devoted to the suppression of the rebellion, and to the restoration of order and prosperity on the solid and sure foundations of Union, freedom, and impartial justice, and I earnestly urge all with whom my counsels may have weight, to allow nothing to divide them while this great work—in comparison with which, persons and even parties are nothing—remains unaccomplished. Cordially your friend,

S. P. CHASE.

To JAS. C. HALL, Senate Chamber, Columbus, O.

Mr. Lincoln was renominated by his friends in several States. On January 8th, the Republican Convention of New Hampshire declared "Abraham Lincoln to be the people's choice for reelection to the Presidency in 1864." On February 17th, the Republican Convention of Connecticut resolved that they regarded Mr.

Lincoln's "reelection to the place he now holds, and the completion of his wise war policy, as vitally important to the best interests of the country." Twenty-one Republican members of the Legislature of New Jersey, in February, addressed a letter to Mr. Lincoln, saying: "We present your name as the man for the American people in 1864." At the same time all the Republican members of the Legislature of Pennsylvania also addressed a letter to Mr. Lincoln, saying: "Expressing what we feel to be the language, not only of our own constituents, but also of all the people of the loyal States, we claim to indulge the expectation that you will yield to the preference which has already made you the people's candidate in 1864." The National Union League of Philadelphia expressed similar views. A large majority of the Assembly of Maryland Legislature, at the same time declared, "that the reelection of Abraham Lincoln to the Presidency is the earnest desire of a vast majority of the loyal people of Maryland." The State Convention passed a resolution of a similar purport. At the same time the Legislature of Minnesota, by a large majority, recommended "our honored President to the people of Minnesota and the country for reelection to the office which he at present fills with such distinguished ability." The Legislature of Kansas, by a large majority, urged the Baltimore Convention to present the "name of our Chief Magistrate as a candidate for reelection, in which event the people of Kansas will rally to his support with an unanimity unparalleled in the history of the elective franchise." The Legislature of California resolved, "That we do heartily favor his reelection." The Republican Convention of Indiana, on February 28d, instructed their delegates to Baltimore to cast their votes for Mr. Lincoln. The Republican Central Committees of New York, at the same time, presented his name. In the Assembly of Missouri Legislature a resolution in favor of nominating Mr. Lincoln was laid on the table, 45 to 37 votes. The Union Leagues of Illinois expressed their preference for Mr. Lincoln. In Ohio, at a caucus of the Republican members of the Legislature, the following resolution was adopted:

Resolved, That in the opinion of this convention, the people of Ohio, and her soldiers in the army, demand the renomination of Abraham Lincoln to the Presidency of the United States.

The members spontaneously arose to their feet, and gave cheer upon cheer at the announcement of the passage of the resolution.

At the time when these movements were taking place, the following letter was quietly circulated:

WASHINGTON, D. C., February, 1864.

SIR: The movements recently made throughout the country to secure the renomination of President Lincoln, render necessary some counteraction on the part of those unconditional friends of the Union who differ from the policy of his Administration.

So long as no efforts were made to forestall the political action of the people it was both wise and patriotic for all true friends of the Government to devote their influence to the suppression of the rebellion.

But when it becomes evident that party machinery and official influence are being used to secure the perpetuation of the present Administration, those who conscientiously believe that the interests of the country and of freedom demand a change in favor of vigor, and purity, and nationality, have no choice but to appeal at once to the people, before it shall be too late to secure a fair discussion of principles.

Those in behalf of whom this communication is made have thoughtfully surveyed the political field, and have arrived at the following conclusions:

1. That even were the reelection of Mr. Lincoln desirable, it is practically impossible against the union of influences which will oppose him.

2. That should he be reelected his manifest tendency toward compromises and temporary expedients of policy will become stronger during a second term than it has been in the first, and the cause of human liberty and the dignity and honor of the nation suffer proportionately; while the war may continue to languish during his whole Administration, till the public debt shall become a burden too great to be borne.

3. That the patronage of the Government, through the necessities of the war, has been so rapidly increased, and to such an enormous extent, and so loosely placed, as to render the application of the "one-term principle" absolutely essential to the certain safety of our Republican institutions.

4. That we find united in Hon. Salmon P. Chase more of the qualities needed in a President during the next four years than are combined in any other available candidate; his record is clear and unimpeachable, showing him to be a statesman of rare ability, and an administrator of the very highest order, while his private character furnishes the surest obtainable guaranty of economy and purity in the management of public affairs.

5. That the discussion of the Presidential question, already commenced by the friends of Mr. Lincoln, has developed a popularity and strength in Mr. Chase unexpected even to his warmest admirers; and, while we are aware that this strength is at present unorganized and in no condition to manifest its real magnitude, we are satisfied that it only needs systematic and faithful effort to develop it to an extent sufficient to overcome all opposing obstacles.

For these reasons, the friends of Mr. Chase have determined on measures which shall present his claims fairly and at once to the country. A central organization has been effected, which already has its connections in all the States, and the object of which is to enable his friends everywhere most effectually to promote his elevation to the Presidency. We wish the hearty coöperation of all those in favor of the speedy restoration of the Union upon the basis of universal freedom, and who desire an administration of the Government, during the first period of its new life, which shall, to the fullest extent, develop the capacity of free institutions, enlarge the resources of the country, diminish the burdens of taxation, elevate the standard of public and private morality, vindicate the honor of the Republic before the world, and in all things make our American nationality the fairest example for imitation which human progress has ever achieved.

If these objects meet your approval, you can render efficient aid by exerting yourself at once to organize your section of the country, and by corresponding with the Chairman of the National Executive Committee, for the purpose either of receiving or imparting information.

Very respectfully,
S. C. POMEROY,
Chairman National Executive Committee.

In the U. S. Senate on March 11th, Mr. Pomeroy in a speech thus explained the preceding circular.

Some curiosity has been manifested, here and elsewhere, as to the authority and genuineness of a cir-

cular issued by me, as chairman of the national executive committee. Such curiosity is very laudable, and I take an early opportunity to say that I did issue that circular, and that it embodies the views of the national committee upon the subject presented. The committee was instituted in the usual manner at a public meeting convened in this city in the month of January last. That meeting comprised members of Congress and citizens from nearly every loyal State in the Union. The committee is composed of members of Congress and other citizens of the United States; all of them, so far as I am advised, of the most unquestioned loyalty, and devoted to the Union, and to freedom as the best means for restoring and preserving the Union. The object of the committee is to unite the sentiment of the country in the support of men and measures suited to the times. It issued a letter, called by some a circular, which it has distributed, as also the speeches of members of Congress on the engrossing topics of the day.

There was nothing secret in or about the letter, unless some person wrote "private" or "secret" upon it in order to attract attention and secure a wider circulation. The only motive for its dissemination at all was to notify the country of the existence of such a committee and of the purpose of its organization. Copies were sent by mail to the President of the United States, to the judges of the courts, the Governors of the States, and other distinguished persons in the loyal portion of the country. I do not know that the Secretary of the Treasury was consulted in reference to the organization of the committee. So far as I am informed, he was ignorant as to the persons composing that committee, as also of its action. This is the era of drafting men into the service of their country, without notice, and in that spirit he was drawn for the service. And because we believed the Secretary of the Treasury to be a suitable person, he was named as a candidate for the position of Chief Magistrate of the nation. We still believe him to be the man whom the people will delight to honor. And I find that many other men in the country think as we do in this matter. Indeed, I have yet to find the man friendly to freedom who does not concede that our choice would deposit the responsibilities of the Executive Government in able and safe hands.

Mr. President, the national executive committee still lives, and in my humble judgment bids fair to establish the fact of its existence on the page of the future. Indeed, its existence has now become almost a "military necessity." Through it we hope to stimulate, encourage, and combine the loyal men of the country for a more vigorous and successful prosecution of the war; believing that a speedy issue to the three years' doubtful conflict will save the credit of the nation, the lives of the army, and the very hope of a free Government among men!

Mr. Pomeroy, in continuing his remarks, complained of the present Administration as not being sufficiently "progressive," and enlarged on the preëminent fitness of Mr. Chase for the office of Chief Magistrate. The following are among the issues involved, as enunciated by the Senator from Kansas:

1. The immediate crushing out of the rebellion by every power in the Government, without amnesty proclamations, etc.
2. Constitutional amendments abolishing and forever prohibiting slavery.
3. The maintenance inviolate of the Monroe doctrine.
4. The organization of a system of rigid economy in all departments of the Government.
5. The confiscation of the property of leading rebels, and the organization in the disloyal States of a republican form of Government.

6. The perfection of a sound system of national currency.

7. Such subordination of States to the General Government as shall secure a true nationality.

8. A general adherence to the practise of the Government for thirty years as respects the one-term policy.

9. Thorough protection of individual rights, including the right of free speech, a free press, and the habeas corpus.

10. The support of a liberal protective system of foreign emigration.

11. Extension of aid toward the construction of a Pacific railroad.

Mr. Wilkinson, at the conclusion of Mr. Pomeroy's speech, made some remarks eulogistic of the existing Executive and his Administration, saying that if Mr. LINCOLN did not advance as fast as some might desire, one thing was certain—he never retraced a step once taken.

On March 25th, a movement was made to obtain a postponement of the meeting of the Baltimore Convention, by an application to the committee, as follows:

NEW YORK, March 25.

To the National Executive Committee of the Union and Republican parties.

GENTLEMEN: The undersigned, friends of the Government and supporters of the present Administration, respectfully suggest to you the propriety of reconsidering your recent action calling a convention of the Union and republican parties at Baltimore, on the 7th day of June next, to nominate a candidate for President of the United States for the ensuing term.

In the opinion of the undersigned, the country is not now in a position to enter into a Presidential contest. It is very important that all parties friendly to the Government shall be united in support of a single candidate, and that, when a selection shall be made, it shall be acquiesced in by all loyal sections of the country, and by all branches of the loyal party. It is equally clear that such unanimity cannot at present be obtained, and it is not believed that it can be reached as early as the day named by you for the national convention.

Upon the result of the measures adopted by the Administration to finish the war during the present spring and summer, will depend the wish of the people to continue in power their present leaders, or to change them for those from whom they may expect other and more satisfactory results.

Whatever time may be gained will be an advantage to the country, inasmuch as it will allow the forming of a better informed opinion on these subjects.

In the opinion of the undersigned, whatever will tend to lessen the duration and allay the acrimony of the Presidential strife, which is always exciting and disturbing in proportion to the length of the canvass, will be an advantage to the country.

In periods of war and great civil revulsions, time is reckoned by events, and months are as years in the periods of peace.

With a pure and patriotic desire to serve the best interests of the country, and in the belief that they will be best served by a postponement of a political convention to the latest day possible, we respectfully ask that you will reconsider your action, and name a day for the assembling of the national convention not earlier than the first day of September next.

Respectfully your obedient servants,

W. C. BRYANT,

J. MCKAY,

GEORGE P. PUTNAM,

GEORGE OPDYKE.

WM. K. STRONG,

WM. CURTIS NOYES,

LORENZO SHEERWOOD,

GEORGE OPDYKE.

The above list, says the N. Y. "Tribune" of April 25th, "contains the names of two-thirds of the Unionists chosen to our present State Senate. Others, who would doubtless have signed, were not in Albany when the above signatures were given. We understand that but two Senators declined to affix their names."

The views of the Abolitionists at this time are expressed in the following statement of the "National Anti-Slavery Standard":

Mr. Garrison has intimated his opinion, in his own paper, that Mr. Lincoln is on the whole the most unexceptionable candidate likely to secure an election. Other eminent Abolitionists have pronounced even more decidedly in favor of Gen. Fremont. And yet others, we believe, incline to the party of Mr. Chase, should the Republican Convention thrust the nomination upon him in spite of his reclamations. But all these inclinations come solely from the belief in the minds of these several men, that their candidate is the man best fitted to finish the great work appointed to this generation to do, or to leave undone at the price of ruin. Not one of them will retain his allegiance to his favorite chief a moment after he has been seen to falter, or after a truer leader shall appear in the field. It is not Lincoln, or Fremont, or Chase, or Butler, that they consider chiefly in this regard, but the slave, whose interests only they are to consult, and whose champion only they look for when they cast about for a fitting Head to the Nation. In their private capacity Abolitionists will exercise their perfect freedom of individual opinion.

On May 6th, the following address of Radical Republicans in favor of Gen. Fremont to the people was issued, inviting a mass convention at Cleveland, O.

To the People of the United States.

After having labored ineffectually to defer as far as was in our power the critical moment when the attention of the people must inevitably be fixed upon the selection of a candidate for the Chief Magistracy of the country; after having interrogated our conscience and consulted our duty as citizens; obeying at once the sentiment of a mature conviction and a profound affection for the common country, we feel ourselves impelled on our own responsibility to declare to the people that the time has come for all independent men, jealous of their liberties and of the national greatness, to confer together and unite to resist the swelling invasion of an open, shameless, and unrestrained patronage which threatens to engulf under its destructive waves the rights of the people, the liberty and dignity of the Nation.

Deeply impressed with the conviction that, in a time of revolution, when the public attention is turned exclusively to the success of armies, and is consequently less vigilant of the public liberties, the patronage derived from the organization of an army of a million of men, and an administration of affairs which seeks to control the remotest parts of the country in favor of its Supreme Chief, constitute a danger seriously threatening to the stability of republican institutions; we declare that the principle of One Term, which has now acquired nearly the force of law by the consecration of time, ought to be in-

flexibly adhered to in the approaching elections. We further declare that we do not recognize in the Baltimore Convention the essential conditions of a truly National Convention. Its proximity to the centre of all the interested influences of the Administration, its distance from the centre of the country, its mode of convocation, the corrupting practices to which it has been and inevitably will be subjected, do not permit the people to assemble there with any expectation of being able to deliberate at full liberty. Convinced as we are, that in presence of the critical circumstances in which the Nation is placed, it is only in the energy and good sense of the people that the general safety can be found; satisfied that the only way to consult it is to indicate a central position to which every one may go without too much expenditure of means and time, and where the assembled people, far from all Administrative influence, may consult freely and deliberate peaceably with the presence of the greatest possible number of men whose known principles guarantee their sincere and enlightened devotion to the rights of the people and to the preservation of the true bases of republican government; we earnestly invite our fellow-citizens to unite at Cleveland, Ohio, on Tuesday, the thirty-first of May next, for consultation and concert of action in respect to the approaching Presidential election.

People's Provisional Committee.—B. Gratz Brown, Mo.; Stephen S. Foster, Mass.; And. Van Antwerp, N. Y.; Bird B. Chapman, Ohio; Ezra C. Andrew, Maine; Henry A. Clover, Mo.; Peter Engelman, Wis.; Caspar Butz, Illinois; George Field, N. Y.; Edward Gilbert, N. Y.; Thomas R. Ackland, N. Y.; B. H. Brooks, Cal.; Peter Gillen, N. Y.; Isaac W. Hoff, N. Y.; Wm. Herries, N. Y.; James Hill, Maine; K. Heinzen, Mass.; And. Humbert, Pa.; S. P. Dinsmore, D. C.; J. W. Alden, N. J.; L. Siebold, Iowa; Wm. Morris Davis, Pa.; E. M. Davis, Pa.; W. H. Crame, Wis.; F. Muench, Mo.; J. Quimby Webster, Maine; W. F. Johnson, Pa.; Fried. Kapp, N. Y.; Charles E. Moss, Mo.; Ernest Pruessing, Ill.; Wm. D. Robinson, Maine; John S. Savery, N. Y.; G. Cluseret, N. Y.; Emil Preetorius, Mo.; Nath. P. Sawyer, Pa.; Ernest Schmidt, Ill.; Albert Gilbert, Colorado; James Redpath, Mass.; Walter H. Shupe, Ohio; Wm. H. Smith, Maine; P. W. Kenyon, N. Y.; James Taussig, Mo.; Ph. Stoppeblen, N. Y.; Samuel Taylor, N. Y.; James S. Thomas, Mo.; J. F. Whipple, N. Y.; Theo. Olshausen, Mo.; George M. Lowman, Pa.; John Wallower, Pa.

This was soon followed by another call for the same object, signed by a number of the State officers of New York, as follows:

To the People.—Citizens of the United States who mean to uphold the Union, who believe that the rebellion can be suppressed without infringing the rights of individual or of State, who regard the extinction of slavery as among the practical effects of the war for the Union, and favor an amendment of the Federal Constitution for the exclusion of slavery, and who demand integrity and economy in the administration of Government, are respectfully invited to meet in Mass Convention, at Cleveland, on Tuesday, the thirty-first day of May, inst., for consultation and concert of action in respect to the approaching Presidential election.

Lucius Robinson; John Cochrane; Andrew J. Colvin; Thomas B. Carroll; Edward Wade; George W. Demers; Ira Porter; Brace Miller; Howard Holdridge; Francis G. Fine; Lemon Thomson; Charles Requa; Smith Requa; Thomas P. White, Ky.; Edward Cole, Ky.; Francis F. Williams, Ky.; Smith Thompson, Ky.; Leroy McArdle, Ky.; Wm. Bentley, Ky.; John F. Smithers, Ky.; Davis S. Whiteley, Ky.; Peter McCall, Ky.; Charles F. French, Ky.; Robert Kraus, Mo.; Hanson Brent, Mo.; J. B. Clairbour, Mc.; Wm. Freel, Mo.; Charles H. Frost, Mo.;

Thomas J. Riddle, Mo.; Wm. L. Bookstaver, Mo.; Fred. L. Braden, Ill.; Caspar O. Fitch, Ill.; Wallace Furman; Frederick Smith; Peter B. Lent, Ind.; Andrew F. Butler; Thomas Wilks; O. Whaley, Mass.; Johnson Stemer; Alfred Moses; Leonard J. Timon; John F. Pendleton, N. J.; Patrick Clare; Simon Munson.

A third call, signed by a considerable number of prominent Abolitionists, also appeared for the same object. Their objects were thus stated: "The things demanded, and which we ask you to join us to render sure, are, the immediate extinction of slavery throughout the whole United States, by Congressional action, the absolute equality of all men before the law without regard to race or color, and such a plan of reconstruction as shall conform entirely to the policy of freedom for all, placing the political power alone in the hands of the loyal, and executing with vigor the law for the confiscating the property of the rebels."

A convention of some five hundred persons assembled at Cleveland in response to these calls, and nominated Major-General John C. Fremont for President, and John Cochrane, Attorney-General of New York, for Vice-President. The political views or objects of the Convention were expressed in the following synopsis of resolutions:

1. The Federal Union shall be preserved.
2. The Constitution and Laws of the United States must be observed and obeyed.
3. The rebellion must be suppressed by force of arms, and without compromise.
4. The rights of free speech, free press, and the *habeas corpus* must be inviolate, save in districts where martial law has been proclaimed.
5. The rebellion has destroyed slavery, and the Federal Constitution should be amended to prohibit its reestablishment, and to secure to all men absolute equality before the law.
6. Integrity and economy are demanded at all times in the administration of the Government, and in time of war the want of them is criminal.
7. The right of asylum, except for crime, and subject to law, is a recognized principle of American liberty; any violation of it cannot be overlooked, and must not go unrebuked.
8. The National policy known as the "Monroe doctrine," has become a recognized principle, and the establishment of an anti-republican Government on this continent by any foreign power cannot be tolerated.
9. The gratitude and support of the nation is due to the faithful soldiers and the earnest leaders of the Union army and navy for their heroic achievements and deathless valor in defence of our imperilled country and civil liberty.
10. The one-term policy for the Presidency, adopted by the people, is strengthened by the force of the existing crisis, and should be upheld by constitutional amendments.
11. The Constitution should be so amended that the President and Vice-President shall be elected by a direct vote of the people.
12. The question of the reconstruction of the Rebellious States belongs to the people, through their respective representatives in Congress, and not to the Executive.
13. That the confiscation of the lands of rebels, and their distribution among the soldiers and actual settlers, is a measure of justice.

Gen. Fremont accepted the nomination in a letter addressed to a Committee of the Convention, on June 4th, as follows:

GENTLEMEN: In answer to the letter which I have had the honor to receive from you, on the part of the representatives of the people assembled at Cleveland, on the 31st of May, I desire to express my thanks for the confidence which led them to offer me the honorable and difficult position of their candidate in the approaching Presidential election.

Very honorable, because in offering it to me you act in the name of a great number of citizens, who seek, above all things, the good of their country, and who have no sort of selfish interest in view. Very difficult, because in accepting the candidacy you propose to me, I am exposed to the reproach of creating a schism in the party with which I have been identified.

Had Mr. Lincoln remained faithful to the principles he was elected to defend, no schism could have been created and no contest would have been possible. This is not an ordinary election; it is a contest for the right even to have candidates, and not merely, as usual, for the choice among them. Now for the first time since 1776, the question of constitutional liberty has been brought directly before the people for their serious consideration and vote. The ordinary rights secured under the Constitution and the laws of the country have been violated and extraordinary powers have been usurped by the Executive. It is directly before the people now to say whether or not the principles established by the Revolution are worth maintaining.

If, as we have been taught to believe, those guarantees for liberty which made the distinctive name and glory of our country, are in truth inviolably sacred, then there must be a protest against the arbitrary violation which had not even the excuse of necessity. The schism is made by those who force the choice between a shameful silence or a protest against wrong. In such considerations originated the Cleveland Convention. It was among its objects to arouse the attention of the people to such facts, and to bring them to realize that while we are saturating southern soil with the best blood of the country in the name of liberty, we have really parted with it at home.

To-day we have in this country the abuses of a military dictation without its unity of action and vigor of execution. An administration marked at home by disregard of constitutional rights, by its violation of personal liberty and the liberty of the press, and, as a crowning shame, by its abandonment of the right of asylum, a right especially dear to all free nations abroad, its course has been characterized by a feebleness and want of principle which has misled European powers and driven them to a belief that only commercial interests and personal aims are concerned, and that no great principles are involved in the issue. The admirable conduct of the people, their readiness to make every sacrifice demanded of them, their forbearance and silence under the suspension of every thing that could be suspended, their many acts of heroism and sacrifices, were all rendered fruitless by the incapacity, or, to speak more exactly, by the personal ends for which the war was managed. This incapacity and selfishness produced such results as led the European powers, and logically enough, to the conviction that the North, with its great, superior population, its immense resources, and its credit, will never be able to coerce the South. Sympathies which should have been with us from the outset of this war were turned against us, and in this way the Administration has done this country a double wrong abroad. It created hostility, or at best indifference, among those who would have been its friends if the real intentions of the people could have been better known, while at the same time it neglected no occasion for making the most humiliating concessions.

Against this disastrous condition of affairs the Cleveland Convention was a protest.

The principles which form the basis of its platform have my unqualified and cordial approbation, but I cannot so heartily concur in all the measures which

you propose. I do not believe that confiscation, extended to the property of all rebels, is practicable; and if it were so, I do not think it a measure of sound policy. It is, in fact, a question belonging to the people themselves to decide, and is a proper occasion for the exercise of their original and sovereign authority. As a war measure, in the beginning of a revolt, which might be quelled by prompt severity, I understand the policy of confiscation; but not as a final measure of reconstruction after the suppression of an insurrection.

In the adjustments which are to follow peace, no considerations of vengeance can consistently be admitted.

The object of the war is to make permanently secure the peace and happiness of the whole country, and there was but a single element in the way of its attainment. This element of slavery may be considered practically destroyed in the country, and it needs only your proposed amendment of the Constitution to make its extinction complete.

With this extinction of slavery the party divisions created by it have also disappeared. And if in the history of the country there has ever been a time when the American people, without regard to one or another of the political divisions, were called upon to give solemnly their voice in a matter which involved the safety of the United States, it is assuredly the present time.

If the Convention at Baltimore will nominate any man whose past life justifies a well-grounded confidence in his fidelity to our cardinal principles, there is no reason why there should be any division among the really patriotic men of the country. To any such I shall be most happy to give a cordial and active support.

My own decided preference is to aid in this way, and not to be myself a candidate. But if Mr. Lincoln is nominated, as I believe it would be fatal to the country to endorse a policy and renew a power which has cost us thousands of men and needlessly put the country on the road to bankruptcy, there will remain no other alternative but to organize against him every element of conscientious opposition with the view to prevent the misfortune of his reelection.

In this contingency I accept the nomination at Cleveland, and as a preliminary step I have resigned my commission in the army. This was a sacrifice it gave me pain to make. But I had for a long time fruitlessly endeavored to obtain service. I make the sacrifice now only to regain the liberty of speech, and to leave nothing in the way of discharging to my utmost ability the task you have set for me.

With my earnest and sincere thanks for your expressions of confidence and regard, and for the many honorable terms in which you acquaint me with the action of the Convention,

I am, gentlemen, very respectfully and truly yours,
J. C. FREMONT.

NEW YORK, June 4, 1864.

To Warhington G. Snether, of Maryland; Edward Gilbert, of New York; Casper Butz, of Illinois; Charles E. Mass, of Missouri; N. P. Sawyer, of Pennsylvania, Committee.

Mr. Cochrane also accepted the nomination, in a letter approving the views of the Convention.

The call for the Baltimore Presidential Convention was issued the earliest in the year, as appears by the following:

WASHINGTON, Feb. 22, 1864.

The undersigned, who, by original appointment, or subsequent designation to fill vacancies, constitute the Executive Committee created by the National Convention held at Chicago on the 16th day of May, 1860, do hereby call upon all qualified voters who desire the unconditional maintenance of the Union, the supremacy of the Constitution, and the complete suppression of the existing rebellion, with the cause

thereof, by vigorous war, and all apt and efficient means, to send delegates to a Convention to assemble at Baltimore on Tuesday the 7th day of June, 1864, at twelve o'clock noon, for the purpose of presenting candidates for the offices of President and Vice-President of the United States. Each State having a representation in Congress will be entitled to as many delegates as shall be equal to twice the number of electors to which such State is entitled in the Electoral College of the United States.

Edwin D. Morgan, N. Y., Chairman; Chas. J. Gilman, Me.; E. H. Rollins, N. H.; L. Brainerd, Vt.; J. Z. Goodrich, Mass.; Thomas G. Turner, R. I.; Gideon Welles, Conn.; Denning Duer, N. J.; Edward McPherson, Pa.; N. B. Smithers, Del.; J. F. Wagner, Md.; Thomas Spooner, O.; H. S. Lane, Ind.; Samuel L. Casey, Ky.; E. Peck, Illinois; Herbert M. Hoxie, Iowa; Austin Blair, Mich.; Carl Schurz, Wis.; W. D. Washburn, Minn.; Cornelius Cople, Cal.; Wm. A. Phillips, Kan.; O. H. Irish, Neb.; Jos. Gerhardt, D. C.

In compliance with this call the Convention assembled at Baltimore on June 7th. Delegates were present from all the free States, and also Delaware, Maryland, Kentucky, West Virginia, and Missouri; also from South Carolina, Florida, Louisiana, Arkansas, Tennessee, and Virginia, and from the Territories of Colorado, Nebraska, and Nevada. The delegates from South Carolina were rejected. Those from Louisiana, Arkansas, and Tennessee were regularly admitted. Those from Virginia and Florida were admitted without the right to vote, and also all other delegates from Territories and the District of Columbia. Ex-Gov. Wm. Dennison, of Ohio, was chosen chairman. Mr. Lincoln was nominated by 492 votes against 22 for Gen. Grant. Andrew Johnson, of Tennessee, was nominated for the vice-presidency.

The views of the Convention were expressed in the following resolutions:

1. *Resolved*, That it is the highest duty of every American citizen to maintain, against all their enemies, the integrity of the Union and the paramount authority of the Constitution and laws of the United States; and that, laying aside all differences and political opinions, we pledge ourselves, as Union men, animated by a common sentiment and aiming at a common object, to do every thing in our power to aid the Government in quelling, by force of arms, the rebellion now raging against its authority, and in bringing to the punishment due to their crimes the rebels and traitors arrayed against it.

2. *Resolved*, That we approve the determination of the Government of the United States not to compromise with rebels, or to offer any terms of peace except such as may be based upon an unconditional surrender of their hostility, and a return to their first allegiance to the Constitution and laws of the United States; and that we call upon the Government to maintain its position, and to prosecute the war with the utmost possible vigor to the complete suppression of the rebellion, in full reliance upon the self-sacrificing patriotism, the heroic valor, and the undying devotion of the American people to their country and its free institutions.

3. *Resolved*, That as slavery was the cause and now constitutes the strength of the rebellion, and as it must be, always and everywhere, hostile to the principles of republican government, justice and the national safety demand its utter and complete extirpation from the soil of the Republic; and that, while we uphold and maintain the acts and proclamations by which the Government, in its own defence, has aimed a death-blow at this gigantic evil, we are in

favor, furthermore, of such an amendment to the Constitution, to be made by the people in conformity with its provisions, as shall terminate and forever prohibit the existence of slavery within the limits of the jurisdiction of the United States.

4. *Resolved*, That the thanks of the American people are due to the soldiers and sailors of the army and navy who have perilled their lives in defence of their country and in vindicating the honor of its flag; that the nation owes to them some permanent recognition of their patriotism and their valor, and ample and permanent provision for those of their survivors who have received disabling and honorable wounds in the service of the country; and that the memories of those who have fallen in its defence shall be held in grateful and everlasting remembrance.

5. *Resolved*, That we approve and applaud the practical wisdom, the unselfish patriotism, and the unswerving fidelity to the Constitution and the principles of American liberty with which Abraham Lincoln has discharged, under circumstances of unparalleled difficulty, the great duties and responsibilities of the Presidential office; that we approve and endorse, as demanded by the emergency, and essential to the preservation of the nation, and as within the provisions of the Constitution, the measures and acts which he has adopted to defend the nation against its open and secret foes; that we approve especially the proclamation of emancipation and the employment as Union soldiers of men heretofore held in slavery; and that we have full confidence in his determination to carry these and all other constitutional measures essential to the elevation of the country into full and complete effect.

6. *Resolved*, That we deem it essential to the general welfare that harmony shall prevail in the national councils, and we regard as worthy of public confidence and official trust those only who cordially endorse the principles proclaimed in these resolutions, and which should characterize the administration of the Government.

7. *Resolved*, That the Government owes to all men employed in its armies, without regard to distinction of color, the full protection of the laws of war, and that any violation of those laws or the usages of civilized nations in time of war by the rebels now in arms should be made the subject of prompt and full redress.

8. *Resolved*, That foreign immigration, which in the past has added so much to the wealth, development of resources, and increase of power of this nation, the asylum of the oppressed of all nations, should be fostered and encouraged by a liberal and just policy.

9. *Resolved*, That we are in favor of the speedy construction of the railroad to the Pacific coast.

10. *Resolved*, That the national faith pledged to the redemption of the public debt must be kept inviolate; and that for this purpose we recommend economy and rigid responsibility in the public expenditures, and a vigorous and just system of taxation, and that it is the duty of every loyal State to sustain the credit and promote the use of the national currency.

11. *Resolved*, That we approve the position taken by the Government that the people of the United States can never regard with indifference the attempt of any European power to overthrow by force, or to supplant by fraud, the institutions of any republican Government on the Western Continent; and that they will view with extreme jealousy, as menacing to the peace and independence of their own country, the efforts of any such power to obtain new footholds for monarchical Governments, sustained by foreign military force, in near proximity to the United States.

On the next day a Committee of the Convention, of which ex-Gov. Dennison, of Ohio, was chairman, informed Mr. Lincoln of his nomination. Ex-Gov. Dennison said:

MR. PRESIDENT: The National Union Convention, which closed its sittings at Baltimore yesterday, appointed a Committee consisting of one from each State, with myself as Chairman, to inform you of your unanimous nomination by that Convention for election to the office of President of the United States. That Committee, I have the honor of now informing you, is present. On its behalf I have also the honor of presenting you with a copy of the resolutions or platform adopted by that Convention, as expressive of its sense, and of the sense of the loyal people of the country, which it represents, of the principles and policy that should characterize the administration of the Government in the present condition of the country. I need not say to you, sir, that Convention, in thus unanimously nominating you for reelection, but gave utterance to the almost universal voice of the loyal people of the country. To doubt of your triumphant election, would be little short of abandoning the hope of a final suppression of the rebellion and the restoration of the Government over the insurgent States. Neither the Convention nor those represented by that body entertained any doubt as to the final result, under your administration, sustained by that loyal people, and by our noble army and gallant navy. Neither did the Convention, nor do this Committee, doubt the speedy suppression of this most wicked and unprovoked rebellion. (A copy of the resolutions was here handed to the President.) I would add, Mr. President, that it would be the pleasure of the Committee to communicate to you, within a few days, through one of its most accomplished members, Mr. Curtis, of New York, by letter, more at length the circumstances under which you have been placed in nomination for the Presidency.

In reply, the President said:

MR. CHAIRMAN AND GENTLEMEN OF THE COMMITTEE: I will neither conceal my gratification nor restrain the expression of my gratitude that the Union people, through their Convention, in the continued effort to save and advance the nation, have deemed me not unworthy to remain in my present position. I know no reason to doubt that I shall accept the nomination tendered, and yet, perhaps, I should not declare definitely before reading and considering what is called the platform. I will say now, however, that I approve the declaration in favor of so amending the Constitution as to prohibit slavery throughout the nation. When the people in revolt, with the hundred days' explicit notice that they could within those days resume their allegiance without the overthrow of their institutions, and that they could not resume it afterward, elected to stand out, such an amendment of the Constitution as is now proposed became a fitting and necessary conclusion to the final success of the Union cause. Such alone can meet and cover all evils. I now perceive its importance and embrace it. In the joint names of Liberty and Union let us labor to give it legal form and practical effect.

On the same day the members of the National Union League, having been in session at Baltimore on the previous day, called upon Mr. Lincoln. The chairman of the deputation said:

MR. PRESIDENT: I have the pleasure of introducing to you the representatives of the Union Leagues of the loyal States to congratulate you upon your re-nomination, and to assure you that we will not fail at the polls to give you the support that your services in the past so highly deserve. We feel honored in doing this; for we are assured that we are aiding in reflecting to the proud position of President of the United States one so highly worthy of it—one among not the least of whose claims is that he was the emancipator of four millions of bondmen.

In reply, Mr. Lincoln said:

GENTLEMEN: I can only say in response to the remarks of your Chairman, I suppose, that I am very grateful for the renewed confidence which has been accorded to me, both by the Convention and by the National League. I am not insensible at all to the personal compliment there is in this; yet I do not allow myself to believe that any but a small portion of it is to be appropriated as a personal compliment to me. The Convention and the nation, I am assured, are alike animated by a higher view of the interests of the country for the present and the great future, and that part I am entitled to appropriate as a compliment is only that which I may lay hold of as being the opinion of the Convention and of the League, that I am not entirely unworthy to be intrusted with the place I have occupied for the last three years. I have not permitted myself, gentlemen, to conclude that I am the best man in the country; but I am reminded in this connection of a story of an old Dutch farmer, who remarked to a companion once that "it was not best to swap horses when crossing streams."

Subsequently, on June 14th, the Committee of the Baltimore Convention addressed a letter to Mr. Lincoln, informing him formally of his nomination, to which he replied as follows:

EXECUTIVE MANSION, WASHINGTON, June 27, 1864.

Hon. William Dennison and others, a Committee of the National Union Convention:

GENTLEMEN: Your letter of the 14th inst., formally notifying me that I have been nominated by the Convention you represent for the Presidency of the United States for four years from the 4th of March next, has been received. The nomination is gratefully accepted, as the resolutions of the Convention—called the platform—are heartily approved.

While the resolution in regard to the supplanting of republican government upon the Western Continent is fully concurred in, there might be misunderstanding were I not to say that the position of the Government in relation to the action of France in Mexico, as assumed through the State Department and endorsed by the Convention, among the measures and acts of the Executive, will be faithfully maintained so long as the state of facts shall leave that position pertinent and applicable.

I am especially gratified that the soldier and the seaman were not forgotten by the Convention, as they forever must and will be remembered by the grateful country for whose salvation they devote their lives.

Thanking you for the kind and complimentary terms in which you have communicated the nomination and other proceedings of the Convention, I subscribe myself your obedient servant,

ABRAHAM LINCOLN.

On Jan. 12th the following call was issued for the assembling of a National Democratic Convention:

NEW YORK, Jan. 12th, 1864.

At a meeting of the National Democratic Committee, held in New York this day, it was unanimously voted that the next National Democratic Convention, for the purpose of nominating candidates for the Presidency and Vice-Presidency of the United States, be held at Chicago, Illinois, on Monday, July 4th, 1864.

By a vote of the Committee at a meeting held Sept. 7th, 1863, the number of Delegates for each State was fixed at double the number of its electoral votes.

AUGUST BELMONT, Chairman.

FREDERICK O. PRINCE, Secretary.

In June a further notice appeared, postponing the assembling of this Convention until Aug. 29th. The effect of this postponement

was to suspend the active discussions which usually take place after each party has made its nominations. The excitement of a Presidential election was thus confined to the brief period between Sept. 1st and Nov. 8th, the day of the election.

On June 15th and 16th Mr. Lincoln visited the Sanitary Fair held in Baltimore and Philadelphia, and made brief speeches at each.

The following letter from Mr. Francis P. Blair, of Washington, the same gentleman who prepared the way for the negotiations at Fortress Monroe at a later period (*see* PUBLIC DOCUMENTS), was written in October, but describes events which took place in July preceding:

SILVER SPRING, Oct. 5th, 1864.

To the Editors of the National Intelligencer:

DEAR SIRS: You give in your paper from "a New York journal" what purports to be an account of what passed in conversation between Gen. McClellan and myself when I visited New York about the 20th of July last. It is egregiously erroneous in many important points. As you evidently attribute some consequence to what is termed my "mission," you will not, I trust, hesitate to publish a simple and truthful statement of its object and execution.

I went to New York to heal the divisions in the Union party, by presenting my views to the leading men there who had in their hands the means of giving direction to the various large sections of that party. I concur in the opinion recently expressed by Gen. Grant, that union in the North would quickly quell the rebellion and restore peace and union to the whole country.

To contribute my mite to effect what I know to be the wish of every patriot, I repaired to New York to make an effort at conciliation. I went to the leading men and leading organs of public opinion there to ascertain in what way harmony would be best attained. I believed that united opposition to the rebellion could be concentrated on no other candidate for the Presidency than on the man against whom the enemy had declared war, because the nation had made him its chief magistrate, and for whom the delegates of the great party, electing in the first instance, had again given its preference by renomination. I went on this errand without consulting the President—without giving him, directly or indirectly, the slightest intimation of my object, and of course without his authority. I apprised no one but my son.

When I reached New York, I first saw the editors of the "Evening Post." This press had evidenced dissatisfaction with the Administration. Its conductors had felt that they had good ground of discontent. I explained to Mr. Bryant the attitude of the President, as I understood it, in reference to the matters that aggrieved him, both as regarded vital measures for the safety of the republic and of minor concerns of a personal character. I found Mr. Bryant the honest patriot which the whole of his life had shown him. He considered Mr. Lincoln, with all his abatements, the only man on whom we could rely for the maintenance of the cause in which we had embarked—for the union of its strength and the restoration of the National Government.

I next saw Mr. Bennett, of the "Herald." I had a long, agreeable, enlightened conversation with him. I expressed my views with earnestness and frankness, as he did those he entertained—not forgetting old scores of differences; and as I left his office he gave me in pretty emphatic raucous Scotch accent his last words for the President: "Tell him to restore McClellan to the army, and he will carry the election by default."

I called on Mr. Greeley. My interview with him satisfied me that his best efforts would not be wanting to secure the peace of the country through the reelection of the President.

Through Mr. Barlow, the intimate personal and political friend of Gen. McClellan (who was not in the city), I let the General know that I would be gratified by an opportunity of conversing with him. He came to town and visited me in my lodging at the Astor House. I had an hour's conversation with him, which I prefaced by telling him the motives which had brought me to New York, as I have stated them above, and by stating distinctly to him that I did not come from Mr. Lincoln; had no authority, or even consent, from him to make representations or overtures of any sort to him; that he had not been apprised of my visit or purpose, which was in part to advise with him (the General) as one whom he knew to be his friend with regard to the public interests and his own.

I told him that I had little doubt he would be the nominee of the Chicago Convention; and that if he accepted he would be defeated, and if defeated, his fate would be that of all previously defeated candidates who had played for the Presidency—Clay, Calhoun, Webster, and the rest; that although aspiration to the chief place in the republic was an honorable ambition, there was an instinct in the public mind which always excluded from general confidence any who sought it with the least suspicion of selfishness at the expense of great national considerations; and, if the public once pronounced its ban by voting him down as having sought the place, without duly weighing its great exigency, especially in such a revolutionary crisis as the present, he could never rise again.

I urged that he ought to consider that at this moment a schism of the Union party of the North, on the issue of the Presidency, was looked to everywhere, at home and abroad, as the only way possible through which the rebellion could accomplish its object—the dissolution of the Union; that I believed that he, the General, was the only man who had a position that enabled any party in the North to rally on, to command a force that could make a breach in the patriotic Union party, so as to defeat or in any essential degree enfeeble it, to give success or even the hope to the enemies of our Government, foreign or domestic; and on this ground I appealed to him to withhold his name from the so-called peace men who were soon to assemble at Chicago. I expressed the opinion that it was his duty to his country, and therefore his own true policy as it regarded his fame and aspirations to public honor, to address a note to Mr. Lincoln asking command in the army—declaring at the same time that he did not seek it with a view to recommend himself to a Presidential nomination; that I thought, and hoped he too thought, that no man, especially in revolutionary times, ought to lead an army in the field and aim through the strength of that position at once to grasp the civil power of the Government; that no man had ever marched from the battle-field to the civil power with an army which he had disciplined and led in person that did not find himself able and willing to use that army to secure that position. I urged, therefore, that if he wished to exert the high military attainments which his friends, and I among the rest, believed belonged to him, for the benefit of his country in its life and death struggle, that he should abandon the idea of being a candidate for the Presidency if he entertained it, and return to service in the field. I said if the President refused he would then be responsible for the consequence. If he assented, the result would be that he would confound his enemies, who had, as I believed, urged on the War Committee and impressed it on the public mind that the delays of the great army he had commanded in achieving decisive results were the consequence of an ambition to clutch the Presidency by lingering out the war and

his command to the end of the Presidential term, that he might make the prestige and hold the means to effect his purpose.

This was the scope of my argument to Gen. McClellan on the topic referred to. It was honestly meant, and designed to promote the public good and his own. He seemed so to consider it. Disclaiming any desire for a Presidential candidacy, he thanked me for the interest I had always taken, as his friend, in the relations of which I spoke; said that the suggestions I had made were worthy of deep consideration and they would be well weighed; that he was called to the country again by a sick child, and regretted he could not probably see me again.

I mentioned to Mr. Lincoln, on my return, the attempt I had made at the conciliation of parties in New York, with a view to defeat the opposition in the North, by restoring harmony among all favoring the crushing of the rebellion by arms, and told him I thought it probable Gen. McClellan might write to him in respect to himself. He neither expressed approval nor disapprobation of what I had done, but his manner was as courteous and as kind as Gen. McClellan's had been.

Your obedient servant, F. P. BLAIR.

On August 18th, the 164th regiment of Ohio soldiers, whose term of service had expired, paid their respects to the President, in front of the Executive Mansion, when he addressed them as follows:

Soldiers—You are about to return to your homes and your friends, after having, as I learn, performed in camp a comparatively short term of duty in this great contest. I am greatly obliged to you, and to all who have come forward at the call of their country. I wish it might be more generally and universally understood what the country is now engaged in. We have, as all will agree, a free Government, where every man has a right to be equal with every other man. In this great struggle, this form of government and every form of human rights is endangered if our enemies succeed. There is more involved in this contest than is realized by every one. There is involved in this struggle the question whether your children and my children shall enjoy the privileges we have enjoyed. I say this in order to impress upon you, if you are not already so impressed, that no small matter shall divert us from our great purpose. There may be some inequalities in the practical application of our system. It is fair that each man shall pay taxes in exact proportion to the value of his property, but if we should wait, before collecting a tax, to adjust the taxes upon each man in exact proportion with every other man, we should never collect any tax at all. There may be mistakes made sometimes; things may be done wrong, while the officers of the Government do all they can to prevent mistakes. But I beg of you, as citizens of this great republic, not to let your minds be carried off from the great work we have before us. This struggle is too large for you to be diverted from it by any small matter. When you return to your homes rise up to the height of a generation of men worthy of a free Government, and we will carry out the great work we have commenced. I return to you my sincere thanks for the honor you have done me this afternoon.

On August 31st, under similar circumstances, he thus addressed the 148th Ohio regiment:

Soldiers of the 148th Ohio—I am most happy to meet you on this occasion. I understand that it has been your honorable privilege to stand, for a brief period, in the defence of your country, and that now you are on your way to your homes. I congratulate you, and those who are waiting to bid you welcome home from the war; and permit me in the name of the people to thank you for the part you have taken

in this struggle for the life of the nation. You are soldiers of the republic, everywhere honored and respected. Whenever I appear before a body of soldiers, I feel tempted to talk to them of the nature of the struggle in which we are engaged. I look upon it as an attempt on the one hand to overwhelm and destroy the national existence, while on our part we are striving to maintain the Government and institutions of our fathers, to enjoy them ourselves, and transmit them to our children and our children's children forever.

To do this the constitutional Administration of our Government must be sustained, and I beg of you not to allow your minds or your hearts to be diverted from the support of all necessary measures for that purpose, by any miserable picaresque arguments addressed to your pockets, or inflammatory appeal made to your passions and your prejudices.

It is vain and foolish to arraign this man or that for the part he has taken or has not taken, and to hold the Government responsible for his acts. In no Administration can there be perfect equality of action and uniform satisfaction rendered by all.

But this Government must be preserved in spite of the acts of any man or set of men. It is worthy of your every effort. Nowhere in the world is presented a Government of so much liberty and equality. To the humblest and poorest amongst us are held out the highest privileges and positions. The present moment finds me at the White House, yet there is as good a chance for your children as there was for my father's.

Again I admonish you not to be turned from your stern purpose of defending our beloved country and its free institutions by any arguments urged by ambitious and designing men, but stand fast to the Union and the old flag.

Soldiers, I bid you God-speed to your homes.

In August the following correspondence relative to a movement for a new nomination for the Presidency took place:

Boston, August 21st, 1864.

General Fremont:

SIR: You must be aware of the wide and growing dissatisfaction, in the Republican ranks, with the Presidential nomination at Baltimore; and you may have seen notices of a movement, just commenced, to unite the thorough and earnest friends of a vigorous prosecution of the war in a new Convention, which shall represent the patriotism of all parties.

To facilitate that movement it is emphatically advisable that the candidates nominated at Cleveland and Baltimore should withdraw and leave the field entirely free for such a united effort. Permit us, sir, to ask whether, in case Mr. Lincoln will withdraw, you will do so, and join your fellow-citizens in this attempt to place the Administration on a basis broad as the patriotism of the country and as it needs.

(Signed) GEO. L. STEARNS, S. R. URINO,
JAMES M. STONE, ELIZUR WRIGHT,
EDW. HABICH, SAM'L G. HOWE.

NAHANT, August 25th, 1864.

GENTLEMEN: I have to acknowledge the receipt of your letter of the 21st, addressed to me in New York.

If your letter were in effect an appeal only to my own sentiments in favor of a reunion of parties, I should not hesitate to renounce any personal views, but would be entirely ready to defer to the public opinion which your names represent.

But the conditions are no longer the same as when I expressed my readiness to retire in the event of a contingency which might have occurred at Baltimore. Having now definitely accepted the Cleveland nomination, I have not the right to act independently of the truly patriotic and earnest party who conferred that honor upon me. In any event, it would be necessary first to consult with them. It might, besides, have only the effect still further to unsettle the public mind, and defeat the object you have in view,

if we should disorganize before first proceeding to organize something better.

To this end I suggest that a direct effort be made to obtain an immediate understanding between the supporters of the Baltimore and Cleveland nominations, in order that the friends of both may coalesce and unite upon an early day for holding such a Convention as you propose. I am satisfied that I do not assume too much in saying that my friends will unite heartily in such a movement.

A really popular Convention, upon a broad and liberal basis, so that it could be regarded as a convocation in mass of the people, and not the work of politicians, would command public confidence. Such a Convention, acting in the large and liberal spirit in which it was called, without considerations of persons or political cliques, and without reference to by-gone situations, rising to the level of the occasion and taking the conditions of the country as they present themselves to-day, could safely be trusted to propose such a policy and name such a man as should, and undoubtedly would, receive the cordial and united support of the patriotic masses of the people. To the great body of these, so far as my information allows me to form any opinion, I think that the following propositions would be acceptable:

1. Respect for the personal liberty and the constitutional rights and dignity of the citizen.
2. The maintenance of the dignity of the United States in their relations to foreign powers.
3. The reestablishment of the Union; by peace, if it is possible; by war, if the employment of peaceful measures cannot be made to succeed.

Much has been said of late about peace, and you will therefore excuse me if I say here what I understand by it. For me, peace signifies the integral reestablishment of the Union without slavery; because slavery is the source of all our political dissensions, and because the institution itself is condemned by the enlightened and liberal spirit of the age. These are to me the essential conditions of peace. If it is practicable to attain this result, it would not be paying too dearly for it—taking also into consideration the material strength which the South has been permitted to acquire by the conduct of the war—to make concessions upon some points of secondary importance, such as that of paying an indemnity for their slaves to those who have remained in a sort of neutral condition during the unhappy war which has convulsed the country. To terminate this we are now expending life and money; it would certainly be a gain to reduce it simply to a question of money.

If, in spite of all these efforts to spare the South humiliation or losses of capital likely to be too severely felt, the political chiefs who direct the South persist in war, then the policy of the Convention should be to pronounce in that case for war with all the force and energy of the nation. For peace upon any terms, and merely because it is peace—a peace recognizing a North and a South—would not bring about a stable equilibrium. It would only prepare the way for new struggles, and for a condition of disastrous anarchy.

The paramount question is the Union. By peace, if it can be had on honorable and right terms; by war, if the political leaders who are directing the South insist upon war.

The situation of our country is unquestionably critical. It demands the devotion and the patriotism of all men who really love their country, and it is one of those moments when all personal aspirations should vanish in the face of the great questions of principle and national existence which are at stake.

Thanking you, gentlemen, for the evidence which your letter gives me of your confidence in my disposition to do every thing in my power for the interests of the country, I am, very truly yours,

J. C. FREMONT.

In Ohio this dissatisfaction was also mani-

fest. A circular was issued in Butler County by former supporters of Mr. Lincoln, calling a Convention on the 6th of August at Hamilton, to consider the withdrawal of Fremont and Lincoln, and the meeting of another Convention in Buffalo on Sept. 22d to nominate a candidate in their stead. Upon this call the New York "Evening Post" remarked:

But whether such a Convention will be needed or not, will depend very much on the action at Chicago. If a Peace Democrat of the character and opinions of Vallandigham should be nominated there, we do not see how the War Democrats, who may be unwilling to support Mr. Lincoln, can be induced to give in their adhesion to the party. On the other hand, if a sound, honest, capable and earnest War Democrat should be nominated there, on the simple platform of "unconditional submission to the Constitution and the laws," it would go far toward rallying to his support all that part of the nation which is dissatisfied with the present administration of affairs. In the former event a new Convention would be requisite; in the latter apparently needless.

Loyal Leagues was the name given to secret associations of Republicans supposed to be organized for the purpose of promoting the success of their favorite candidate for the Presidency. Very little is publicly known of them, but they were supposed to extend throughout all portions of the free States. On Aug. 3d the State Council of the Leagues in New York adopted the following resolution:

Resolved, That we earnestly recommend and urge upon the subordinate councils to organize military companies within their several bodies, to arm and drill with the utmost diligence, and with great caution, that no unnecessary occasion of offence be given to our enemies.

This recommendation was very generally adopted.

On the other hand, it was stated that secret political associations existed in the other parties, and particularly the Democratic, designed to aid their cause in the election. Whatever associations for this object may have existed in any party, the veil which hides their proceedings from the public gaze has not as yet been removed, and nothing further can here be said than to state the fact of their supposed existence.

On the adjournment of Congress in July, the Democratic members of that body issued a lengthy address to the members of their party, of which the following are the concluding sentences:

There are but two classes of men in this country who may rejoice in existing conditions: First, those who make money out of the war; and second, those who desire to achieve emancipation by it. As to the former, their thirst for sudden wealth is gratified, and it is not in their nature to regret deeply those calamities which fall upon their fellow-countrymen, but from which they are exempted. And as to the Radical Abolitionist, his cup of enjoyment is almost full. He believes that emancipation will take place, or the Union remain broken forever. Either result satisfies him profoundly and wholly, and no possible event during his existence can compete with either of these in merit and excellence.

But has not the country borne all it can reasonably bear, in fact much more than it can reasonably bear,

for the gratification of these two classes of men, and shal. not the Administration of the Government, under favor of which they nestle in power and gratify their unholy greed and their detestable passions, be thrown out of power, thus relieving the country from this nightmare of corruption and fanaticism which is pressing out its very existence?

Short sighted and passionate men rush on to accomplish an immediate object, unable to perceive the consequences which lie beyond the present moment, and unwilling to believe that new obstacles in their path of passion and vengeance will succeed to the existing ones. They vainly think that if slavery be struck down by force, regardless of law or civil obligation, and negro equality be established in its stead, no subject of difficulty, no case of national peril, no "stone of stumbling," will remain in the path of our national progress. Vain delusion! Such expectations are proved to be false by a thousand examples in history. The source of danger is in these wild passions let loose in the land, which will not regard civil obligations, and which, in their headlong fury, tread under foot both public law and individual right. We do not decry theory, but we assert that statesmanship is concerned mainly in the domain of the practical, and that, in the present imperfect condition of human affairs, it is obliged to modify general ideas and adapt them to existing conditions, which are infinitely diverse in different countries and at different times. And, as all political powers are conventional—that is, established by express or implied consent—the validity of any political act must rest upon the ground that it is authorized.

Some distinct authority for it must be shown, or we must determine against its existence. And to the existence of a free government, and to the harmony and prosperity of a country wherein it is established, there must be a profound and constant respect by rulers and by people for all those things which have been agreed upon or instituted in affairs of Government, and there must be a careful repression of all the destructive forces by which the bands of society are loosened, and license or abuse introduced into public or social action. Of destructive forces, constituting capital causes of danger, corruption and fanaticism (before mentioned) must be ranked as chief; and are they not now both in existence, and conspicuous beyond any former example in these United States? Are they not predominant characteristics of the party which achieved success in 1860, and has since held and now holds possession of political power? And can there be hope of the future so long as these destructive principles run their course unrebuked and uncurbed? The sound elements of society must be brought to the surface, the body politic be purged of its unhealthy elements, and in places of public trust, just and broad-minded, pure and tolerant men be substituted for radicals and corruptionists. Then will the laws be kept; then will free individual action be permitted and permissible; crime only will be punished, and harmony and peaceful relations and widely-diffused prosperity succeed to violence, intolerance, waste, bloodshed, and debauchment of the national life!

The Democratic Convention assembled at Chicago on August 29th, and was organized by the election of Horatio Seymour, of New York, as chairman. Gen. Geo. B. McClellan was nominated for the Presidency. He received 202½ votes, and Thos. H. Seymour, of Conn., 28½ votes. The nomination was subsequently made unanimous. Geo. H. Pendleton was nominated for the Vice-Presidency. The views of the Convention were expressed in the following resolutions:

Resolved, That in the future, as in the past, we will

adhere with unswerving fidelity to the Union under the Constitution, as the only solid foundation of our strength, security, and happiness as a people, and as a framework of Government equally conducive to the welfare and prosperity of all the States, both Northern and Southern.

Resolved, That this Convention does explicitly declare, as the sense of the American people, that after four years of failure to restore the Union by the experiment of war, during which, under the pretence of military necessity, or war power higher than the Constitution, the Constitution itself has been disregarded in every part, and public liberty and private right alike trodden down, and the material prosperity of the country essentially impaired, justice, humanity, liberty, and the public welfare demand that immediate efforts be made for a cessation of hostilities, with a view to an ultimate convention of the States or other peaceable means, to the end that at the earliest practicable moment peace may be restored on the basis of the Federal Union of the States.

Resolved, That the direct interference of the military authorities of the United States in the recent elections held in Kentucky, Maryland, Missouri, and Delaware, was a shameful violation of the Constitution, and a repetition of such acts in the approaching election will be held as revolutionary and resisted with all the means and power under our control.

Resolved, That the aim and object of the Democratic party are to preserve the Federal Union and the rights of the States unimpaired; and they hereby declare that they consider the Administrative usurpation of extraordinary and dangerous powers not granted by the Constitution; the subversion of the civil by the military laws in States not in insurrection; the arbitrary military arrest, imprisonment, trial, and sentence of American citizens in States where civil law exists in full force; the suppression of freedom of speech and of the press; the denial of the right of asylum; the open and avowed disregard of State rights; the employment of unusual test oaths, and the interference with and denial of the right of the people to bear arms in their defence, as calculated to prevent a restoration of the Union and the perpetuation of a Government deriving its just powers from the consent of the governed.

Resolved, That the shameful disregard by the Administration of its duty in respect to our fellow-citizens who are now and long have been prisoners of war in a suffering condition, deserves the severest reprobation on the score alike of public policy and common humanity.

Resolved, That the sympathy of the Democratic party is heartily and earnestly extended to the soldiers of our army and the seamen of our navy, who are and have been in the field under the flag of their country; and in the event of its attaining power, they will receive all the care, protection, and regard that the brave soldiers and sailors of the republic have so nobly earned.

Mr. Wickliffe, of Kentucky, said: "The delegates from the West were of the opinion that circumstances may occur between noon of to-day and the 4th of March next, which will make it proper for the Democracy of the country to meet in convention again." He therefore moved the following resolution, which was unanimously adopted:

Resolved, That this Convention shall not be dissolved by adjournment at the close of its business, but shall remain organized, subject to be called at any time and place that the Executive National Committee shall designate.

A committee appointed by the Convention notified Gen. McClellan of his nomination, which he accepted in the following letter:

ORANGE, N. J., September 8th.

To Hon. Horatio Seymour and others, Committee, &c.:

GENTLEMEN: I have the honor to acknowledge the receipt of your letter informing me of my nomination by the Democratic National Convention recently held at Chicago, as their candidate at the next election for President of the United States.

It is unnecessary for me to say to you that this nomination comes to me unsought. I am happy to know that when the nomination was made, the record of my public life was kept in view. The effect of long and varied service in the army, during war and peace, has been to strengthen and make indelible in my mind and heart the love and reverence for the Union, Constitution, laws, and flag of our country impressed upon me in early youth. These feelings have thus far guided the course of my life, and must continue to do so until its end. The existence of more than one Government over the region which once owned our flag, is incompatible with the peace, the power, and the happiness of the people. The preservation of our Union was the sole avowed object for which the war was commenced. It should have been conducted for that object only, and in accordance with those principles which I took occasion to declare when in active service. Thus conducted the work of reconciliation would have been easy, and we might have reaped the benefits of our many victories on land and sea.

The Union was originally formed by the exercise of a spirit of conciliation and compromise. To restore and preserve it, the same spirit must prevail in our councils and in the hearts of the people. The reestablishment of the Union, in all its integrity, is and must continue to be the indispensable condition in any settlement. So soon as it is clear, or even probable, that our present adversaries are ready for peace upon the basis of the Union, we should exhaust all the resources of statesmanship practised by civilized nations and taught by the traditions of the American people, consistent with the honor and interests of the country, to secure such peace, reestablish the Union, and guarantee for the future the constitutional rights of every State. The Union is the one condition of peace. We ask no more.

Let me add what I doubt not was, although unexpressed, the sentiment of the Convention, as it is of the people they represent, that when any one State is willing to return to the Union it should be received at once with a full guarantee of all its constitutional rights. If a frank, earnest, and persistent effort to obtain these objects should fail, the responsibility for ulterior consequences will fall upon those who remain in arms against the Union, but the Union must be preserved at all hazards. I could not look in the face my gallant comrades of the army and navy who have survived so many bloody battles, and tell them that their labors and the sacrifice of so many of our slain and wounded brethren had been in vain, that we had abandoned that Union for which we have so often perilled our lives. A vast majority of our people, whether in the army and navy or at home, would, as I would, hail with unbounded joy the permanent restoration of peace on the basis of the Union under the Constitution, without the effusion of another drop of blood, but no peace can be permanent without Union.

As to the other subjects presented in the resolutions of the Convention, I need only say that I should seek in the Constitution of the United States, and the laws framed in accordance therewith, the rule of my duty and the limitation of Executive power; endeavor to restore economy in public expenditures, reestablish the supremacy of the law, and by the operation of a more vigorous nationality resume our commanding position among the nations of the earth. The condition of our finances, the depreciation of the paper money and the burdens thereby imposed on labor and capital, shows the necessity of a return to a sound financial system, while the

rights of citizens and the rights of States and the binding authority of law over the President, army, and people, are subjects of not less vital importance in war than in peace.

Believing that the views here expressed are those of the Convention and the people you represent, I accept the nomination. I realize the weight of the responsibility to be borne should the people ratify your choice. Conscious of my own weakness, I can only seek fervently the guidance of the Ruler of the Universe, and, relying on His all-powerful aid, do my best to restore Union and peace to a suffering people, and to establish and guard their liberties and rights.

Very respectfully,

GEO. B. McCLELLAN.

The political discussions which now ensued were conducted with great vigor and spirit. The Democratic party were early made to take a defensive position instead of being assailants. It was charged that the second resolution contemplated a cessation of hostilities under an armistice which might lead to peace with a dissolution of the Union. Notwithstanding this disadvantage they marshalled their forces with all their ancient energy. They urged in reply that the war was conducted not so much to restore the Union as to destroy the State institution of slavery. Mr. Seward, the Secretary of State, met this argument in a speech at Auburn on September 8d, with these words:

Although altogether unauthorized to speak for the President upon hypothetical questions, I think I can give an answer upon the subject of slavery at the present day—an answer which will be explicit, and, I hope, not altogether unsatisfactory. While the rebels continue to wage war against the Government of the United States, the military measures affecting slavery, which have been adopted from necessity, to bring the war to a speedy and successful end, will be continued, except so far as practical experience shall show that they can be modified advantageously, with a view to the same end. When the insurgents shall have disbanded their armies and laid down their arms, the war will instantly cease; and all the war measures then existing, including those which affect slavery, will cease also; and all the moral, economical, and political questions affecting slavery as others, which shall then be existing, between individuals, and States, and the Federal Government, whether they arose before the civil war began, or whether they grew out of it, will, by force of the Constitution, pass over to the arbitration of the courts of law, and to the councils of legislation.

Again, at Washington, on Sept. 14th, in an address to the members of the Lincoln and Johnson Association, he said:

Fellow-citizens, the Democracy at Chicago, after waiting six weeks to see whether this war for the Union is to succeed or fail, finally concluded that it would fail, and therefore went in for a nomination and platform to make it the sure thing by a cessation of hostilities and an abandonment of the contest. At Baltimore, on the contrary, we determined that there should be no such thing as failure, and therefore we went in to save the Union by battle to the last. Sherman and Farragut have knocked the bottom out of the Chicago nominations, and the elections in Vermont and Maine prove the Baltimore nominations staunch and sound. The issue is thus squarely made up—McClellan and disunion, or Lincoln and Union. Have you any doubt of the result on that issue? (Cries of "No." "No.") Nor do I have any doubt. Many thanks, my friends, for this visit

The victories of Gen. Sherman at Atlanta and Rear Admiral Farragut at Mobile were announced on Sept. 2d, and the Administration immediately used them with great effect. On the next day the following orders were issued by the President:

EXECUTIVE MANSION,
WASHINGTON CITY, Sept. 3, 1864.

The signal success that Divine Providence has recently vouchsafed to the operations of the United States fleet and army in the harbor of Mobile, and the reduction of Fort Powell, Fort Gaines, and Fort Morgan, and the glorious achievements of the army under Major-General Sherman in the State of Georgia, resulting in the capture of the city of Atlanta, call for devout acknowledgment to the Supreme Being, in whose hands are the destinies of nations. It is therefore requested that on next Sunday, in all places of worship in the United States, thanksgiving be offered to Him for His mercy in preserving our national existence against the insurgent rebels who have been waging a cruel war against the Government of the United States for its overthrow; and also that prayer be made for Divine protection to our brave soldiers and their leaders in the field, who have so often and so gallantly perilled their lives in battling with the enemy, and for blessing and comfort from the Father of Mercies to the sick, wounded, and prisoners, and to the orphans and widows of those who have fallen in the service of their country; and that He will continue to uphold the Government of the United States against all the efforts of public enemies and secret foes. ABRAHAM LINCOLN.

EXECUTIVE MANSION, Sept. 3, 1864.

The national thanks are tendered by the President to Admiral Farragut and Major-General Canby for the skill and harmony with which the recent operations in Mobile harbor and against Fort Powell, Fort Gaines, and Fort Morgan were planned and carried into execution; also to Admiral Farragut and Major-General Granger, under whose immediate command they were conducted, and to the gallant commanders on sea and land, and to the sailors and soldiers engaged in the operations, for their energy and courage, which, under the blessing of Providence, have been crowned with brilliant success, and have won for them the applause and thanks of the nation.

ABRAHAM LINCOLN.

EXECUTIVE MANSION, Sept. 3, 1864.

The national thanks are tendered by the President to Major-General William T. Sherman and the gallant officers and soldiers of his command before Atlanta, for the distinguished ability, courage, and perseverance displayed in the campaign in Georgia, which, under Divine power, resulted in the capture of the city of Atlanta.

The marches, battles, sieges, and other military operations that have signalized this campaign must render it famous in the annals of war, and have entitled those who have participated therein to the applause and thanks of the nation.

ABRAHAM LINCOLN.

EXECUTIVE MANSION,
WASHINGTON CITY, Sept. 3, 1864.

Ordered:

1st. That on Monday, the 5th day of September, commencing at the hour of 12 o'clock, noon, there shall be given a salute of one hundred guns at the Arsenal and Navy Yard at Washington, and on Tuesday, the 6th of September, or on the day after the receipt of this order, at each arsenal and navy yard in the United States, for the recent brilliant achievements of the fleet and land forces of the United States in the harbor of Mobile and the reduction of Fort Powell, Fort Gaines, and Fort Morgan. The Secretary of War and the Secretary of the Navy will issue the necessary directions in their respective departments for the execution of this order.

2d. That on Wednesday, the 7th day of September, commencing at the hour of twelve o'clock, noon, there shall be fired a salute of one hundred guns at the Arsenal at Washington, and at New York, Boston, Philadelphia, Baltimore, Pittsburg, Newport, Ky., and St. Louis, and at New Orleans, Mobile, Pensacola, Hilton Head, and Newbern the day after the receipt of this order, for the brilliant achievements of the army under command of Major-General Sherman in the State of Georgia and the capture of Atlanta. The Secretary of War will issue directions for the execution of this order.

ABRAHAM LINCOLN.

On Sept. 17th Gen. Fremont withdrew from the field as a candidate for the Presidency. In his letter he said:

The Presidential question has, in effect, been entered upon in such a way, that the union of the Republican party has become a paramount necessity. The policy of the Democratic party signifies either separation or reestablishment with slavery. The Chicago platform is simply separation. Gen. McClellan's letter of acceptance is reestablishment with slavery. The Republican candidate is, on the contrary, pledged to the reestablishment of the Union without slavery; and, however hesitating his policy may be, the pressure of his party will, we may hope, force him to it. Between these issues, I think that no man of the liberal party can remain in doubt, and I believe I am consistent with my antecedents and my principles in withdrawing—not to aid in the triumph of Mr. Lincoln, but to do my part toward preventing the election of the Democratic candidate. In respect to Mr. Lincoln I continue to hold exactly the sentiments contained in my letter of acceptance. I consider that his administration has been politically, militarily, and financially a failure, and that its necessary continuance is a cause of regret for the country.

A portion of the Democratic party, known as Peace Democrats (*see CONGRESS, U. S., Speech of A. Long, of Ohio*), were dissatisfied with the proceedings of the Chicago Convention, and contemplated holding another Convention and making an independent nomination. The following letter from Mr. Long explains this movement:

CINCINNATI, Sept. 29, 1864.

MY DEAR SIR: Your favor of the 22d was duly received, and should have had an earlier answer. Want of time is my excuse, however, for not doing so. I did not go to New York. Amos Green, of Illinois, who was one of the conferees, and present at all the meetings at the St. Nicholas Hotel, was here, and gave me a full detail of all they did.

They had passed a resolution to hold a Convention in this city, during the present week, for the purpose of making an independent nomination, but on the receipt of my despatch of Tuesday night, which was not received by General Singleton until Wednesday, they then rescinded the resolution, concluding that if Ohio would do nothing they would do likewise. And, upon the rescinding of the resolution, the "Metropolitan Record" and "Freeman's Journal" caved in, but Ben Wood determined to stand out alone, and is doing so manfully, at a loss of from \$1,000 to \$1,200 a week.

Singleton is in Washington now, and has not been home since the Convention. His whole soul is in the cause, and he is at this time operating through a channel you would not suspect, but which has been confided to me in confidence.

There is no enthusiasm in the Democracy here, and the election is almost going by default, and I see nothing but defeat; I cannot see it differently. But a short time will determine it now. I hope to see

you at the proposed Peace Convention in this city, on the 18th of next month. Very truly, yours,
ALEXANDER LONG.

No public Convention was held in Cincinnati as contemplated.

The charge was made that Mr. Pendleton, the nominee for the Vice-Presidency, sympathized with the Peace Democrats, and which, united with the charge that the policy of the Chicago Convention tended to separation, caused the publication of the following letter:

CINCINNATI, October 17, 1864.

MY DEAR SIR: I have received your friendly letter. Malignant misrepresentations and falsehoods are so frequent in our political struggles, that I have rarely undertaken to correct or refute them. I make no professions of a new faith, only repeat my reiterated professions of an old one, when I say there is no one who cherishes a greater regard for the Union, who has a higher sense of its inestimable benefits, who would more earnestly labor for its restoration, by all means which will effect that end, than myself. The Union is the guarantee of the peace, the power, the prosperity of this people, and no man would deprecate more heartily, or oppose more persistently, the establishment of another Government over any portion of the territory ever within its limits. I am in favor of extending no conditions, insisting upon no terms not prescribed in the Constitution, and I am opposed to any course of policy which will defeat the reestablishment of the Government upon its old foundations and its territorial integrity.

I am, very truly, yours, etc.

GEO. H. PENDLETON.

To Hon. JOHN B. HASKIN, New York.

On October 19th a number of citizens of Maryland, residing in Washington, accompanied by a delegation of the Lincoln and Johnson Club, serenaded the President in the evening, when he made the following brief address:

FRIENDS AND FELLOW-CITIZENS: I am notified that this is a compliment paid me by the loyal Marylanders resident in this district. I infer that the adoption of the new Constitution for the State furnishes the occasion, and that in your view the extirpation of slavery constitutes the chief merit of the new Constitution.

Most heartily do I congratulate you, and Maryland, and the nation, and the world upon the event. I regret that it did not occur two years sooner, which, I am sure, would have saved to the nation more money than would have met all the private loss incident to the measure. But it has come at last, and I sincerely hope its friends may fully realize all their anticipations of good from it, and that its opponents may, by its effects, be agreeably and profitably disappointed.

A word upon another subject. Something said by the Secretary of State, in his recent speech at Auburn, has been construed by some into a threat that, if I should be beaten at the election, I will, between then and the end of my constitutional term, do what I may be able to ruin the Government. Others regard the fact that the Chicago Convention adjourned, not *sine die*, but to meet again if called to do so by a particular individual, as the intimation of a purpose that if their nominee shall be elected he will at once seize control of the Government.

I hope the good people will permit themselves to suffer no uneasiness on either point. I am struggling to maintain the Government, not to overthrow it. I am struggling especially to prevent others from overthrowing it. I therefore say that, if I shall live, I shall remain President until the fourth of next March, and that whoever shall be constitutionally elected therefore in November shall be duly installed as President on the fourth of March; and that in the interval I shall do my utmost that whoever is to hold the helm

for the next voyage shall start with the best possible chance of saving the ship. This is due to the people, both on principle and under the Constitution. Their will, constitutionally expressed, is the ultimate law for all. If they should deliberately resolve to have immediate peace, even at the loss of their country and their liberties, I know not the power or the right to resist them. It is their own business, and they must do as they please with their own. I believe, however, they are still resolved to preserve their country and their liberties, and in this, in office or out of it, I am resolved to stand by them. I may add that, in this purpose to save the country and its liberties, no classes of people seem so nearly unanimous as the soldiers in the field and the sailors afloat. Do they not have the hardest of it? Who should quail while they do not? God bless the soldiers and seamen, with all their brave commanders!

In order to enable the soldiers absent from a State, and in the service of the United States, to vote at elections, acts had been passed by the Legislatures of several of the States.

In some of these States it had been necessary to amend the Constitution so as to authorize the passage of such an act. On the part of the Government, the following regulations were issued from the Adjutant-General's Office at Washington:

In order to secure a fair distribution of tickets among soldiers in the field, who, by the laws of their respective States, are entitled to vote the approaching elections, the following rules and regulations are prescribed:

1. One agent for each army corps may be designated by the State executive, or by the State committee of each political party, who, on presenting his credentials from the State executive, or the chairman of said committee, shall receive from this department a pass to the headquarters of the corps for which he is designated, with tickets, or proxies when required by State laws, which may be placed by him in the hands of such person or persons as he may select for distribution among officers and soldiers.

2. Civilian inspectors of each political party, not to exceed one for each brigade, may in like manner be designated, who shall receive passes on application to the adjutant-general, to be present on the day of election to see that the elections are fairly conducted.

3. No political speeches, harangues, or canvassing among the troops will be permitted.

4. Commanding officers are enjoined to take such measures as may be essential to secure freedom and fairness in the elections, and that they be conducted with due regard to good order and military discipline.

5. Any officer or private who may wantonly destroy tickets, or prevent their proper distribution among the legal voters, interfere with the freedom of the election, or make any false or fraudulent return, will be deemed guilty of an offence against good order and military discipline, and be punished by summary dismissal or court-martial.

It was charged by one party that some of the agents committed frauds, and they were arrested and tried subsequently by a military commission. It was charged by the opposite party that the votes of soldiers sent through the mails were delayed until after the election, or that the letters were opened and the votes changed by persons in the post-offices.

As the day of election approached the military commanders of Departments considered it to be their duty to take care that rebels did not enter the country from Canada and vote for President, and make raids upon the people.

On Oct. 28 Gen. Dix issued an order stating that satisfactory information had reached him that rebel agents in Canada designed to send into the United States large numbers of refugees, deserters, and enemies of the Government, to vote at the Presidential election, and it was not unlikely that they would subsequently be organized to shoot respectable citizens and plunder public property. He said such persons were liable to punishment, and no efforts would be spared to arrest them. All Provost Marshals and deputies were charged to detect such persons, and electors were recommended to take measures for their own security and to aid the authorities in bringing rebel emissaries to punishment. Effective measures would be taken to prevent their return into Canada. All persons from the rebel States were required to report to the military authorities in New York or to the Provost Marshals in other places for registry by the 3d of November, otherwise they would be treated as spies and emissaries.

At the same time Gen. Couch, commanding the Department of the Susquehanna, issued an order requiring "all refugees, rebel deserters, and citizens of rebel States who were in that department, or who might enter it before the 8th day of November," to report to the nearest district or town Provost Marshal, that they might be registered and description recorded, and receive proper certificates and papers. Persons belonging to any of the classes above mentioned found within the limits of the department on or after the date named, without authority, or who by pillaging, counselling outbreak, destruction of life or property, or in any manner acting as enemies of the Government, would be regarded as spies, and subjected to summary punishment. All military officials were strictly enjoined to guard well the integrity of the ballot-box.

At the same time, also, Gen. Hooker, commanding the Northern Department, with headquarters at Cincinnati, issued an order stating that he had received information that it was the intention of a large body of men on the Northern frontier, on each side of the line, open on one side and in disguise on the other, to organize at the ensuing election, to interfere with the integrity of the election, and, when in their power, to cast illegal votes; in fact, in any way to interfere with the honest expressions of the electors. He accordingly directed all military commanders and provost marshals to adopt measures at once to prevent this interference with the rights of the people, and to bring to punishment all persons who might offend the laws in this particular.

On Nov. 5th Maj.-Gen. Butler, who had arrived at New York a few days previous, issued the following order, which explained his position and duties in that city:

HEADQUARTERS CITY OF NEW YORK, Nov. 5, 1864.

General Orders No. 1. In obedience to the orders of the President, and by the assignment of Maj.-Gen. Dix, commanding Department of the East, Maj.-Gen.

Butler assumes command of the troops arriving and about to arrive, detailed for duty in the State of New York, to meet existing emergencies.

To correct misapprehension, to soothe the fears of the weak and timid, to allay the nervousness of the ill-advised, to silence all false rumors circulated by bad men for wicked purposes, and to contradict once and for all false statements adapted to injure the Government in the respect and confidence of the people—the commanding General takes occasion to declare that troops have been detailed for duty in this district sufficient to preserve the peace of the United States, to protect public property, to prevent and punish incursions into our borders, and to insure calm and quiet.

If it were not within the information of the Government that raids, like in quality and object to that made at St. Albans, were in contemplation, there would have been no necessity for precautionary preparations.

The Commanding General has been pained to see publications by some not too well-informed persons, that the presence of the troops of the United States might, by possibility, have an effect upon the free exercise of the duty of voting at the ensuing election.

Nothing could be further from the truth.

The soldiers of the United States are specially to see to it that there is no interference with the election unless the civil authorities are overcome with force by bad men.

The armies of the United States are "ministers of good and not of evil." They are safeguards of constitutional liberty, which is FREEDOM TO DO RIGHT, NOT WRONG. They can be a terror to evil doers only, and those who fear them are accused by their own consciences.

Let every citizen having a right to vote act according to the inspiration of his own judgment, freely. He will be protected in that right by the whole power of the Government if it shall become necessary.

At the polls it is not possible exactly to separate the illegal from the legal vote—"the tares from the wheat"—but it is possible to detect and punish the fraudulent voter after the election is over.

Fraudulent voting in election of United States officers is an offence against the peace and dignity of the United States.

Every man knows whether he is a duly qualified voter, and he who votes, not being qualified, does a grievous wrong against light and knowledge.

Specially is fraudulent voting a deadly sin and heinous crime, deserving condign punishment in those who have rebelliously seceded from, and repudiated their allegiance to this Government when at their homes in the South, now having fled here for asylum, abuse the hospitality of the State and clemency of the Government by interfering in the election of our rulers.

Such men pile rebellion upon treason, breach of faith upon perjury, and forfeit the amnesty accorded them. It will not be well for them to do so.

There can be no military organization in any State, known to the laws, save the militia and armies of the United States. By command of

Maj.-Gen. BENJ. F. BUTLER.

R. F. PUFFER, Captain, A. D. C., A. A. A. General.

On the evening of Nov. 2d a large meeting of persons called "War Democrats," was held at Cooper Institute, in New York City. Maj.-Gen. Dix was the principal speaker. Without inserting the lengthy resolutions adopted by the meeting, the following extract from a speech of General Dix at Sandusky, Ohio, on Oct. 26th, indicates the general views of the assemblage:

I will say one word, however, on the subject which lies nearest the heart of every loyal man—I mean the rebellion. It has been my conviction from the begin-

ning that we can have no honorable peace until the insurgent armies are dispersed and the leaders of the rebellion expelled from the country. I believe that a cessation of hostilities would lead inevitably and directly to a recognition of the insurgent States; and when I say this I need hardly add that I can have no part in any political movement of which the Chicago platform is the basis. No, fellow-citizens, the only hope of securing an honorable peace—a peace which shall restore the Union and the Constitution, lies in a steady, persistent, and unrelenting prosecution of the war; and I believe the judgment of every right-thinking man will soon bring him to this conviction.

The great interest taken by a portion of the clergy of the country in the result of the Presidential election is stated in the "Christian

Register," Nov. 12th, the leading organ of the Unitarian denomination. It says:

Last Sunday, allusion was made to the election, by very many clergymen, and the drift of their remarks were unmistakable. The New York correspondent of the "Boston Journal" says: "Nearly every pulpit yesterday resounded with patriotic appeals. Most of them were draped with the American flag, and flung out the nation's banner from their flagstuffs."

The New York "Tribune" reports Mr. Beecher's discourse on Sunday evening, and characterizes it as the sixth and closing sermon of a remarkable series. From the remotest border of Maine to the rebel line, from the Atlantic to the Pacific, the duties of the hour were made the topic of prayer and sermon.

The election for President took place on November 8th, and the vote was as follows:

STATES.	1864.			1860.				1856.		
	Repub. Lincoln.	Dem. McClellan.	Repub. Majority.	Repub. Lincoln.	Dem. Douglas.	Dem. Breck'g.	Union. Bell.	Repub. Fremont.	Dem. Buchanan.	Am. Fillmore.

West Virginia	28,192	10,489	12,714
Wisconsin	58,408	65,884	17,574	86,110	65,021	838	161	66,090	52,548	579
Total	2,303,881	1,797,019	406,812	1,868,452	1,876,157	847,958	590,681	1,842,164	1,808,029	874,625
Per cent	55.69	44.91	29.87	29.87	18.11	12.55	32.36	44.85	21.79

The total vote of the people at the Presidential elections since 1824, has been as follows:

Year.	Vote.	Increase.	Year.	Vote.	Increase.
1828	1,162,118	1848	2,575,284	1127,256
1832	1,290,491	128,878	1852	3,129,129	558,945
1836	1,501,298	210,807	1856	3,902,818	883,689
1840	2,402,554	901,261	1860	4,680,198	687,885
1844	2,702,540	299,986	1864	4,000,550	1679,242

In 1864 there were eleven States which did not vote. If the vote which these States cast in 1860, viz., 858,524, is deducted from the vote of that year, there will remain 3,821,669, being the vote in 1860 of those States which voted in 1864.

But the vote of 1864 was increased over that of 1860 by the vote of the Territories Kansas

and Nevada, which had become States, viz., 36,552. With this deduction, the vote of 1864 was 3,964,298. The vote of the twenty-two States in 1860 and 1864 was as follows:

Year.	Vote.	Increase.
1860	3,921,669
1864	3,964,298	142,700

This is the increase of the vote of 1864 over 1860 in the twenty-two Union States, including also the vote of West Virginia, which was 83,590.

The Presidential electors in 1864 were as follows:

In Illinois, the first three named are Electors at Large; in all the other States, the first two. The remainder of the names are placed in the numerical order of the districts they represent. The Electors of Delaware, Kentucky, and New

* Democratic majority.

† Decrease.

Jersey voted for George B. McClellan for President, and George H. Pendleton for Vice-President. The Electors in the remaining States voted for Abraham Lincoln for President, and Andrew Johnson for Vice-President.

CALIFORNIA.—J. G. McCallum, Samuel Brannon, Charles Macley, W. W. Crane, Jr., Walter Oliver.

CONNECTICUT.—John T. Wait, Oliver F. Winchester,* James G. Batterson, Samuel C. Hubbard, Sabin L. Sayles, Frederick A. Benjamin.

DELAWARE.—Victor Du Pont, Ayers Stockley, Harberson Heinkman.

ILLINOIS.—John Dougherty, Francis A. Hoffman, Benjamin M. Prentiss, John V. Farwell, Hon. Anson S. Miller, John V. Eustace, James S. Bogue, John J. Bennet, W. T. Hopkins, Frank Blade, J. C. Conkling, William Walker, Thos. W. Harris, F. A. McCurdy, A. N. Metcalf, S. Clifford.

INDIANA.—David S. Gooding, Richard W. Thompson, James C. Denny, Cyrus T. Nixon, Henry R. Pritchard, Leonidas Sexton, Benjamin F. Claypool, J. J. Wright, John Osborn, R. P. Davidson, James P. Belford, Timothy R. Dickinson, John M. Wallace.

IOWA.—Charles Ben Darwin, William G. Thompson, John Van Valkenberg, Samuel S. Burdett, Benjamin T. Hunt, Dan. Anderson, Gillman C. Mudgett, Henry Clay Henderson.

KANSAS.—W. F. Cloud, Thomas Moonlight, ———, Robert McBratney.

KENTUCKY.—Frank Wolford, Thornton F. Marshall, T. A. Duke, B. C. Ritter, T. C. Winfrey, J. P. Barbour, W. F. Bullock, A. H. Ward, George S. Shanklin, W. A. Hoskins, Harrison Taylor.

LOUISIANA.—W. T. Stucker, Alfred Shaw, F. A. Woolfley, J. R. Terry, J. E. Shaffer, J. K. Belden, S. G. Hamilton.

MAINE.—John B. Brown, Abner Stetson, Richard M. Chapman, Thos. A. D. Fessenden, Going Hathorn, Benj. F. Gilman, John N. Swasey.

MARYLAND.—Wm. J. Albert, H. H. Goldsborough, W. H. W. Farrow, Wm. S. Reese, R. S. Matthews, Isaac Nesbit, George W. Sands.

MASSACHUSETTS.—Edward Everett, Whiting Griswold, Richard Borden, Artemas Hale, George Putnam, J. M. G. Williams, John G. Whittier, George L. Davis, Stephen M. Weld, Levi Lincoln, William S. Clark, John Wells.

MICHIGAN.—Robert R. Beecher, Thomas D. Gilbert, Frederick Waldorf, Marsh Giddings, Christian Eberbach, Perry Hannah, Omar D. Conger, George W. Peck.

MINNESOTA.—Chas. H. Lindsley, John G. Betz, J. N. Murdoch, J. W. Morford.

MISSOURI.—S. O. Scofield, C. D. Drake, Lucien Eaton, Barnabas Smith, James C. Killian, H. J. Lindenbower, George R. Smith, Charles Carpenter, I. C. Parker, W. Smith Ingham, J. T. C. Fagg.

NEVADA.—S. T. Gage, A. S. Peck, A. W. Baldwin.

NEW HAMPSHIRE.—William H. Y. Hackett, Daniel M. Christie, Archibald H. Dunlap, Allen Giffin, Henry O. Kent.

NEW JERSEY.—William Patterson, Furman L. Mulford, Thomas McKeon, William P. McMichael, Charles R. Cornwell, Francis S. Lathrop, John McGregor.

NEW YORK.—Horace Greeley, Preston King, Obadiah Bowne, James S. T. Stranahan, George Ricard, Abram J. Dittenhoefer, Wm. H. McKinney, Thos. B. Asten, Isaac T. Smith, George Opdyke, Guy R. Pelton, Alexander Davidson, James W. Taylor, Charles L. Beale, Thaddeus Hait, John Tweddle, Cornelius L. Allen, Alonzo W. Morgan, Hiram Horton, Allen C. Churchill, Ebenezer Blakeley, John Clarke, John J. Knox, Thomas Kingsford, George W. Bradford,

John E. Seeley, Jedediah Dewey, Myron H. Weaver, James Alley, John W. Stebbins, William Bristol, Joseph Candee, John P. Darling.

OHIO.—John M. Connell, John P. Biehn, John K. Green, Stanley Matthews, Lewis P. Gunckel, Stephen Johnston, William L. Walker, Miles Gardner, Henry W. Smith, Ozias Bowen, Jacob Scroggs, William Sheffield, George A. Waller, Henry P. Page, James R. Stanberry, John H. McCombs, Frederick W. Wood, Lorenzo Danford, John McCook, Seth Marshall, Abner Kellogg.

OREGON.—George L. Woods, H. N. George, J. F. Gasley.

PENNSYLVANIA.—Morton McMichael, Thomas Cunningham, Robert P. King, G. Morrison Coates, Henry Bumm, Wm. H. Kern, Barton H. Jenks, Charles M. Runk, Robert Parke, William Taylor, John A. Hiestano, Richard H. Corryell, Edward Halliday, Charles F. Reed, Elias W. Hale, Charles H. Shriner, John B. Clark,* David McCaughy, David W. Woods, Isaac Benson, John Patton, Samuel B. Dick, Everard Bierer, John P. Penney, Ebenezer McJunkin, John W. Blanchard.

RHODE ISLAND.—Robert B. Cranston, William S. Slater, Rowse Babcock, Simon Henry Greene.

TENNESSEE.—Horace Maynard, William H. Wisner, Robert A. Crawford, Leonidas C. Hook, John C. Everett, William B. Stokes, J. O. Shackelford, Theodore H. Gibbs, Almon Case, William H. Fitch.

VERMONT.—Daniel Kellogg, Albert L. Catlin, Seneca M. Dorr, Ryland Fletcher, James W. Simpson.

WEST VIRGINIA.—Ellery R. Hall, W. E. Stevenson, John H. Atkinson, Edward C. Bunker, R. S. Brown.

WISCONSIN.—Wm. W. Field, Henry L. Blood, Geo. C. Northrop, Jonathan Bowman, Allen Worden, Henry J. Turner, Henry F. Belitz, Alexander S. McDill.

On the evening after the election, when sufficient telegraphic despatches had been received to indicate the result, Mr. Lincoln was serenaded by a body of Pennsylvanians, when he said:

Friends and Fellow-Citizens: Even before I had been informed by you that this compliment was paid me by loyal citizens of Pennsylvania, friendly to me, I had inferred that you were of that portion of my countrymen who think that the best interests of the nation are to be subserved by the support of the present administration. I do not pretend to say that you, who think so, embrace all the patriotism and loyalty of the country, but I do believe, and I trust without personal interest, that the welfare of the country does require that such support and endorsement should be given. I earnestly believe that the consequences of this day's work, if it be as you assure and as now seems probable, will be to the lasting advantage, if not to the very salvation of the country.

I cannot at this hour say what has been the result of the election; but whatever it may be I have no desire to modify this opinion, that all who have labored to-day in behalf of the Union have wrought for the best interests of the country and the world, not only for the present, but for all future ages. I am thankful to God for this approval of the people; but while deeply grateful for this mark of their confidence in me, if I know my heart, my gratitude is free from any taint of personal triumph. I do not impugn the motives of any one opposed to me. It is no pleasure to me to triumph over any one, but I give thanks to the Almighty for this evidence of the people's resolution to stand by free government and the rights of humanity.

* Chosen by college in place of John P. Elton, who died in Waterbury, Conn., November 10th, 1864.

* Chosen by college in place of John Wister, absent from the country.

On October 3d, a National Convention of colored people was held in Syracuse, N. Y., to take into consideration the future of the colored race in America. The delegates were respectable in numbers, and their proceedings highly creditable. The following was adopted as the sense of the Convention:

1st. As a branch of the human family, we have for long ages been deeply and cruelly wronged by people whose might constituted their right; we have been subdued, not by the power of ideas, but by brute force, and have been unjustly deprived not only of many of our natural rights, but debarred the privileges and advantages freely accorded to other men.

2d. We have been made to suffer well-nigh every cruelty and indignity possible to be heaped upon human beings, and for no fault of our own.

3d. We have been taunted with our inferiority by people whose statute books contain laws inflicting the severest penalties on whosoever dared teach us the art of reading God's word; we have been denounced as incurably ignorant, and, at the same time, have been, by stern enactments, debarred from taking even the first step toward self-enlightenment and personal and national elevation; we have been declared incapable of self-government by those who refused us the right of experiment in that direction, and we have been denounced as cowards by men who refused at first to trust us with a musket on the battle-field.

4th. As a people we have been denied the ownership of our bodies, our wives, homes, children, and the products of our own labor; we have been compelled, under pain of death, to submit to wrongs deeper and darker than the earth ever witnessed in the case of any other people; we have been forced to silence and inaction in full presence of the infernal spectacle of our sons groaning under the lash, our daughters ravished, our wives violated, and our fire-sides desolated, while we ourselves have been led to the shambles and sold like beasts of the field.

5th. When the nation in her trial hour called her sable sons to arms, we gladly went to fight her battles, but were denied the pay accorded to others, until public opinion demanded it, and then it was tardily granted. We have fought and conquered, but have been denied the laurels of victory. We have fought where victory gave us no glory, and where captivity meant cool murder on the field by fire, sword, and halter, and yet no black man ever flinched.

6th. We are taxed, but denied the right of representation. We are practically debarred the right of trial by jury. And institutions of learning which we help to support are closed against us.

We submit to the American people and the world the following declaration of our rights, asking a calm consideration thereof:

1st. We declare that all men are born free and equal; that no man or government has a right to annul, repeal, abrogate, contravene, or render inoperative this fundamental principle, except it be for crime; therefore we demand the immediate and unconditional abolition of slavery.

2d. That as natives of the American soil we claim the right to remain upon it, and that any attempt to deport, remove, expatriate, or colonize us to any other land, or to mass us here against our will, is unjust, for here were we born, for this country our fathers and our brothers have fought, and here we hope to remain in the full enjoyment of enfranchised manhood and its dignities.

3d. That as citizens of the Republic we claim the rights of other citizens; we claim that we are, by right, entitled to respect, that due attention should be given to our needs, that proper rewards should be given for our services, and that the immunities and

privileges of all other citizens and defenders of the nation's honor should be conceded to us; we claim the right to be heard in the halls of Congress; and we claim our fair share of the public domain, whether acquired by purchase, treaty, confiscation, or military conquest.

4th. That emerging as we are from the long night of gloom and sorrow, we are entitled to and claim the sympathy and aid of the entire Christian world, and we invoke the considerate aid of mankind in this crisis of our history, and in this hour of sacrifice, suffering, and trial.

These are our wrongs—these a portion of what we deem to be our rights as men, as patriots, as citizens, and as children of the Common Father. To realize and attain these rights and their practical recognition, is our purpose. We confide our cause to the just God, whose benign aid we solemnly invoke. To Him we appeal.

The progress of public opinion in the free States relative to the social and political condition of the African race, is too important to be overlooked.

The following letter is from the most highly educated and prominent man of that race in the Northern States:

ROCHESTER, May 23, 1864.

SIR: I mean the complete abolition of every vestige, form, and modification of slavery in every part of the United States; perfect equality for the black man in every State before the law, in the jury-box, at the ballot-box, and on the battle-field; ample and salutary retaliation for every instance of enslavement or slaughter of prisoners of any color. I mean that in the distribution of offices and honors under this Government, no discrimination shall be made in favor of or against any class of citizens, whether black or white, of native or foreign birth. And, supposing that the convention which is to meet at Cleveland means the same thing, I cheerfully give my name as one of the signers of the call.

Yours, respectfully,

FREDERICK DOUGLASS.

E. GILBERT, Esq.

On June 3d Mr. Chase, then Secretary of the Treasury, in reply to an invitation to be present at a public meeting in New York, to celebrate Gen. Grant's victories, said:

Permit me to add that, while we rejoice in the success of our armies, and give thanks to God for them, we should not forget that there is one class of defenders of the flag—one class of men loyal to the Union—to whom we yet fail to do complete justice. It will be the marvel of future historians that statesmen of this day were willing to risk the success of rebellion, rather than entrust to black loyalists bullets and ballots.

Very truly yours,

S. P. CHASE.

At a later day, when Chief Justice, and presiding at the third anniversary of the Freedmen's Relief Association in Washington, he said:

And now comes another question. Shall the loyal blacks of rebel States be permitted to protect themselves and protect white loyalists also by their votes, from new oppression by amnestied but still vindictive rebels? I cannot doubt what a just and magnanimous people will determine. They will say, "Let ballots go with bullets: let freedom be defended by suffrage," and again legislation and administration will bow to the majesty of the people.

While the bill to organize Montana Territory was before Congress, the question of negro suf-

frage came before that body. For the debates on the occasion, *see* CONGRESS U. S.

The question was discussed in Missouri, and strongly urged by Senator Brown, as necessary to be acted upon by the State Constitutional Convention, which assembled in January, 1865. It was earnestly pressed by the Radical Abolitionists, and somewhat discussed in various parts of the country. A joint resolution passed the Senate of Michigan, to submit to the people, in Nov., 1866, an amendment to the Constitution to allow colored men to vote.

At the January, 1865, term of the United States Supreme Court, held at Washington, Chief Justice Chase presiding; on motion of Senator Charles Sumner, John S. Rock, a citizen of Massachusetts, of African descent, was admitted to practise as a member of the Court. A few weeks later the Rev. Dr. Garnett, a colored Virginian and native of Norfolk, conducted the religious services, and preached in the Representatives' Chamber of Congress on the Sabbath. The choir was composed of white and colored singers, and more colored people than ordinary were present in the congregation. At the Presidential reception on New Year's day, 1865, the colored people hung round the doors until the crowd of white visitors sensibly diminished. They then summoned up courage, and began timidly to approach the hall. Some of them were richly and gaily dressed, some were in tattered garments, and some of them in the most fanciful and grotesque costume. All pressed eagerly forward. When they came into the presence of the President, doubting as to their reception, the feelings of the poor creatures overcame them. What followed is thus narrated by a spectator:

For nearly two weary hours Mr. Lincoln had been shaking the hands of the "sovereigns," and had become excessively weary and his grasp became languid; but here his nerves rallied at the unwonted sight, and he welcomed this motley crowd with a heartiness that made them wild with exceeding joy. They laughed and wept, and wept and laughed, exclaiming, through their blinding tears, "God bless you!" "God bless Abraham Lincoln!" "God bless Massa Linkum!"

On June 30th Mr. Chase resigned the office of Secretary of the Treasury, and ex-Gov. Tod, of Ohio, was nominated to fill the vacancy. He immediately declined, and Senator Fessenden, of Maine, was nominated and accepted. On Sept. 23d Postmaster Gen. Blair resigned, in compliance with the request of the following letter:

EXECUTIVE MANSION, WASHINGTON, Sept. 23, 1864.
Hon Montgomery Blair.

MY DEAR SIR: You have generously said to me more than once, that whenever your resignation could be a relief to me it was at my disposal. The time has come. You very well know that this proceeds from no dissatisfaction of mine with you personally or officially. Your uniform kindness has been unsurpassed by that of any friend; and while it is true that the war does not so greatly add to the difficulties of your department as to those of some others, it is yet much to say, as I most truly can, that in the three years and a half during which you have

administered the General Post-office, I remember no single complaint against you in connection therewith.
Yours as ever, ABRAHAM LINCOLN.

Ex-Gov. William Dennison, of Ohio, was appointed to the vacancy. About the same time Mr. J. Speed, of Kentucky, became Attorney-General, to fill the vacancy occasioned by the resignation of Mr. Bates.

A colony of emigrants, who left Fortress Monroe in the spring of 1863 for Hayti, became the victims of misfortune from the day of their departure. They were attacked with the small-pox, and landed on the houseless island of A'Vache. A vessel was sent for them in February, which soon brought the remnant to Alexandria, in a state of great destitution.

UNITED STATES CHRISTIAN COMMISSION. From the commencement of the war the Young Men's Christian Associations, in most of the larger cities and towns of the loyal States, had contributed largely, not only in money and supplies, to the relief and comfort of the soldiers, but in personal service. Many of their members were in the army, and the sympathy felt for them by those who remained at home prompted to efficient action for the spiritual as well as physical needs of the army. After every considerable battle, members of these associations were despatched with money, sanitary stores, and supplies, and religious and moral reading matter for free distribution to the sufferers.

At a convention of these Christian Associations, held in New York, November 16, 1861, it was resolved to organize from the representatives of these bodies a United States Christian Commission, and the following persons were appointed: Rev. Rollin H. Neale, D.D., Boston; George H. Stuart, Esq., Philadelphia; Rev. Bishop E. S. Janes, D.D., New York; Rev. M. L. R. P. Thompson, D.D., Cincinnati; Hon. Benjamin F. Manierre, New York; General Clinton B. Fisk, St. Louis; Rev. Benjamin C. Cutler, D.D., Brooklyn; Hon. John V. Farwell, Chicago; Mitchell H. Miller, Esq., Washington; John D. Hill, M.D., Buffalo. During the succeeding year Mr. Manierre and Rev. Dr. Cutler resigned, and their places were filled by the appointment of Jay Cooke, Esq., of Philadelphia, and Rev. James Eells, D.D., of Brooklyn. To these were subsequently added John P. Crozer, of Philadelphia; Charles Demond, of Boston; Rev. W. E. Boardman, Ex. Off. Philadelphia; Hon. George F. Patton, Bath, Me.; Rev. James Pike, Sanbornton Bridge, N. H.; Edward S. Tobey, Boston; Rev. Francis Wayland, D.D., Providence, R. I.; Rev. Heman Dyer, D.D., New York; Hon. William E. Dodge, New York; Nathan Bishop, LL.D., New York; Morris K. Jesup, New York; Joseph Patterson, Philadelphia; Rev. Bishop M. Simpson, D.D., Philadelphia; Hon. J. G. Smith, Gov. of Vt.; G. S. Griffith, Baltimore; Hon. W. T. Willey, Morgantown, W. V.; A. E. Chamberlain, Cincinnati; Rev. R. J. Breckinridge, D.D., Lexington.

ton, Ky.; Rev. S. D. Storrs, Atchison, Kansas; J. B. Roberts, San Francisco; Hon. James W. Nye, Carson City, Nevada; Hon. W. A. Buckingham, Norwich, Conn.; Walter S. Griffith, Brooklyn, N. Y.; Samuel B. Caldwell, Brooklyn, N. Y.; Rev. Charles Hodge, D. D., Princeton, N. S.; Stephen Colwell, Philadelphia; Horatio G. Jones, Philadelphia; William Frew, Pittsburg; Prof. M. L. Stoeber, Gettysburg; Rt. Rev. Alfred Lee, D. D., Wilmington, Del.; Hon. Francis H. Pierpont, Alexandria, Va.; Rt. Rev. C. P. McIlvaine, D. D., Cincinnati, Ohio; Hon. Schuyler Colfax, South Bend, Ind.; Hon. John Owen, Detroit; Walter S. Carter, Milwaukee; Hon. Hiram Price, Davenport, Iowa; Rev. E. Lehman, Chaska, Minn.; Rev. S. Cornelius, Portland, Oregon; Hon. John Evans, Denver City, Col.

Mr. George H. Stuart, of Philadelphia, was elected its President, and has served in that capacity up to the present time. Three or four months were consumed in arranging its plan of operations, in obtaining the approval of the President of the United States, the Secretary of War, the Secretary of the Navy, the General in command, and the Surgeon General. It was then deemed best to remove its headquarters to Philadelphia, and Rev. William E. Boardman was appointed General Secretary. There were added, in 1864, a Secretary of the Home organization, and a Secretary of the Field organization.

The general character of the duties of the Commission was defined at the meeting that brought it into existence; its grand object as avowed was to promote the physical comfort and the spiritual welfare of the brave men of the army and navy, in the field, in the hospital, the prison, or wherever they may be found. Like the Government it embraces within the range of its influence the whole Union, and provides for the material and spiritual necessities of suffering humanity without regard to race, creed, or position. It aims to save life in the hour of peril, to ameliorate the condition of our soldiers and seamen, to perform in the midst of the war the office of a kind friend, to supply, as far as possible, the place of home, to furnish opportune and substantial relief when required, to bind up the wounds, to pour in the wine and the oil of love and peace, to speak a word of sympathy and encouragement to the suffering and depressed, to bring the influences of the Gospel to bear upon those who are far from home and its privileges, exposed to the dangers and temptations peculiar to the camp, to arrest the thoughtless in their course and reclaim the wayward, to send forth the living, practical teacher, to whisper Christian consolation to the dying, the wounded, and heavy-laden in heart.

In addition to the general executive committee and its central office in Philadelphia, the Commission has its agencies, its branch organizations in the principal cities and towns of the land, engaged in collecting stores and procur-

ing funds to carry on the work in the field. It has its extensive bases of supplies for the different armies, and its carefully-organized corps of permanent agents, thoroughly acquainted with the wants of the soldiers and prepared to forward stores upon a requisition given by those in proximity to the scene of action. It maintains a constant supervision over the camp and field-hospitals, and when special emergencies arise demanding extraordinary activity and energy, during and after every battle, its representatives are present dispensing with a bountiful hand whatever may contribute to the comfort and immediate relief of the wounded. It sends forth ministers and laymen, voluntary agents, who labor without compensation to distribute with their own hands, under the direction of the surgeons, the stores gathered together, to circulate the Scriptures, religious newspapers and tracts, reading of a moral and instructive character, and lead men to repentance and a Christian life. It aids the surgeon, helps the chaplain, follows the army in its marches, goes into the trenches, courses along the picket-line, and ministers personally to the suffering and the distressed. Its influence is felt wherever the dying, the wounded, the sick, and the afflicted are to be found. It furnishes clothing to the destitute, nutritious food to the sick, books for military hospitals, posts, and gunboats, a supply of paper, envelopes, ink, pens, pencils, and the thousand comforts which are gratefully appreciated by the soldier, and which the Government cannot provide. It cheers with the consolations of religion those appointed to die; and as the soul passes from the body it receives its dying words, and communicates the sad record to the bereaved at home. It administers Christian burial when practicable, and marks the place of interment for the satisfaction of distant friends. Besides the more private appeals and personal instructions given by the delegates in the tent and the hospital, public services are held from day to day, especially during the winter campaigns, chapels are erected, and meetings for prayer, conference, and preaching organized. The Secretary of the Commission has compendiously but clearly set forth its system and work as follows:

I. DIVISION OF THE ARMY FIELD.

GENERAL.—1. Armies near Richmond. 2. Army in the Shenandoah Valley. 3. Army of the Cumberland, etc. 4. Armies along the Southern Mississippi. 5. Armies in Missouri, Arkansas, and Kansas. 6. The navy, southern coast, and gulf supplied from New York.

SPECIAL.—Stations and corps organizations.

A station in each great army centre when the army is at rest, and a moving organization in each corps when the army moves.

Out-stations to meet wants of various sections.

Permanent stations in all great permanent centres.

II. MEN AND WOMEN FOR THE FIELD.

1. Agents.—Permanent—paid.

One field agent for each general division, five in all, with assistants in the larger fields.

One station agent or corps captain for each station or corps organization, with teamsters.

2. Delegates for six weeks, or longer, unpaid; from

two to ten at each station, as needed; and at City Point, forty to fifty. Three hundred the full corps. Over three thousand in all have served.

3. *Managers of Diet Kitchens.*—About sixty ladies employed.

III. APPLIANCES.

1. Barrack chapels, store, and subsistence rooms, at permanent camps.

2. Chapel, store, and subsistence tents, at all movable stations.

3. Churches, houses, etc., detailed by Government, at most permanent stations.

4. Wagons and teams, four horse, for each moving organization; two-horse for such stations as require them.

5. Special diet kitchens in field-hospitals, managed under direction of the surgeons, by Christian Commission lady managers.

IV. LABORS.

1. *Hospital.*—Preaching; prayer-meetings; personal intercourse with soldiers; and distribution.

2. *Field.*—The same—at all stations, and along the lines; at all out-stations, isolated posts, batteries, etc.

3. Battle-field work.

4. Individual relief, aid, and information, at special request.

5. Forwarding home money for soldiers in service, and effects of deceased soldiers.

6. Managing special diet kitchens, under medical authorities.

V. WHAT IS DISTRIBUTED.

Battle-field, hospital, and special diet kitchen stores; such as shirts, drawers, socks, handkerchiefs, towels, bandages, lint, farina, corn-starch, crackers, cordials, dried fruits, canned fruits, fresh apples, grapes, peaches, etc., onions, potatoes, ice, syrups, jellies, pickles, etc., Jamaica ginger, condensed milk. Bibles for hospitals and Bible-classes; Testaments to all soldiers. Scriptures in German, French, and other foreign languages. Gunboat libraries, hospital libraries, soldiers' books, weekly and monthly religious papers, over four hundred thousand a month; tracts, Silent Comforters, etc.

The General Government has cheerfully furnished the free transportation of men and supplies over all military railways, and generously granted many privileges and accommodations, restricted only by absolute military necessity. Railroad and steamboat companies have, under proper regulations, very generally given passes for the delegates of the Commission and for the transportation of their stores. The telegraph wires, without charge, have been used for the transmission of despatches on business with the Institution, and every information and opportunity afforded to enable the Commission to carry forward its appropriate and benevolent work intelligently and successfully. The whole army is accessible to the labors of the Commission. Its delegates are welcomed at all points, its authority regarded and its influence felt. Its voluntary, unpaid delegates, have been men of the highest position and character, bishops and pastors of the largest and most influential churches in city and country, lawyers and physicians of eminence, merchants and manufacturers, students of colleges and theological seminaries, etc. The American Bible Society has granted largely of Bibles and Testaments in different languages; the Tract and Publication Societies, and publishers of religious and moral books, periodicals, and newspapers, of

their several issues; and ladies of the highest respectability have given themselves to the work, under its auspices, of providing for the necessities of the suffering soldier.

The expenditures as well as the receipts of the Commission have increased each year in a rapidly-expanding rate. In 1862, the first year of its existence, its entire receipts were \$281,256.29, of which only \$50,000 or \$60,000 were in cash, the remainder being in supplies and facilities of transportation, etc., granted to it. In 1863 the total receipts of the central and branch offices of the Commission were estimated at \$916,887.65: of which \$358,239.29 was in money, and the remainder in stores, grants, and railroad and telegraph facilities, and the estimated value of the services of delegates. In 1864 the total estimated receipts were \$2,882,347.86: of which \$1,297,755.28 was in money; \$1,160,608.37 in hospital stores; \$33,084.88 in publications donated; \$72,114.88 in Bibles and Testaments from the American Bible Society. The estimated value of volunteer delegates services was \$169,920; the value of railroad, steamboat, and other transportation facilities, \$106,765; value of telegraphic facilities, \$26,450; rents of warehouses and offices donated, \$6,750.

The total aggregate of receipts for the three years ending Jan. 1, 1865, was \$4,030,441.80. Since that period not far from \$400,000 in money has been received, and very large amounts of hospital supplies.

The following general summary of the work and distribution of the Commission for the year 1864, will give some idea of its activity and usefulness:

Boxes of hospital stores and publications distributed during the year...	47,108	
Value of stores distributed.....		\$1,714,261 85
Value of publications distributed...		448,574 26
Value of stationery distributed.....		34,894 71
Value of 205 chapels and chapel tents erected during last winter and the present, in the various armies....		114,800 78
Copies of Bibles and Testaments and portions of Scriptures distributed during the year.....	569,594	
Copies of Hymn and Psalm-books distributed during the year.....	4,515,928	
Copies of bound library books distributed during the year.....	83,872	
Copies of magazines and pamphlets distributed during the year.....	846,586	
Copies of religious, weekly, and monthly newspapers distributed during the year.....	7,990,788	
Copies of pages of tracts.....	18,681,842	
Copies of "Silent Comforter," &c....	8,091	
Delegates commissioned during the year.....	2,317	
Aggregate number of days of delegate service.....	78,906	
Average number of delegates constantly in field during the year...	217	
Number of delegates now in the field.....	276	
Balance of cash on hand at the central office, January 1st, 1865.....		\$5,420 19

UNITED STATES UNION COMMISSION. This, like the Sanitary and Christian Commissions, was called into existence by the exigencies of the war. The contending armies surging to

and fro over extensive regions of country had desolated them completely, seizing not only garnered but growing crops, cattle, horses, and mules, and destroying ruthlessly dwellings, barns, and fences, often applying the torch to those edifices which shot and shell had spared. From these desolated regions, often infested with guerrillas, whose murderous malignity spared neither age nor sex, fled their wretched inhabitants, mostly women and children, homeless and penniless, nearly naked and often starving, wearied, sick, and dying, seeking shelter and sustenance within the Union lines, at Nashville, Vicksburg, and Memphis. Military necessity forbade their remaining in these advanced posts of the Union armies; and rendering them what assistance could be spared in the way of food, the Government shipped them to Cairo, Louisville, St. Louis, Cincinnati, and other points. Here they were landed, sick, helpless, and friendless. Neither State nor municipal charity could legally be bestowed upon them, but that they might not perish benevolent societies were organized which did what they could to shelter, clothe, and feed them, and provide places for them in the country. These organizations were local, called into existence by the emergency, and had not any central organization or means of mutual co-operation. Meanwhile the demand for help was increasing with fearful rapidity. In June, 1864, the present President of the American Union Commission, visiting the West with other gentlemen as a delegate of the United States Christian Commission, became deeply affected with the sufferings and necessities of these poor refugees, and after free conference with other patriotic and benevolent men, east and west, it was resolved to organize a Commission, having for its object the care and welfare of these refugees, and their eventual restoration, so far as was possible, to homes and home comforts. Most of these people were the wives and children of Unionists, who had either been killed or imprisoned for their loyalty, or were serving in the Union armies as soldiers of the nation. To leave their families to perish would have been unworthy of a great and noble people. A small portion, under the teachings of southern demagogues, were, in spite of their sufferings, still disloyal; but they, too, were starving, and Christianity forbade refusing succor to them. It was foreseen, too, that with the close of the war would arise other needs no less imperious, and demanding an enlarged and national charity. Industry must be revived in the regions wasted by war; desolated homes must be rebuilt, and farms stocked anew and supplied with the implements of husbandry and with seeds for crops. The confiscated lands must be made accessible to settlers, and emigration of the right character guided and stimulated. Free schools must be organized and sustained for a time in part by northern capital. Loyal presses, too, must be established, and the social structure renovated and placed upon its new basis

of freedom, order, and law. While this change was going on, though superintended mainly, and supported in part by persons who had previously resided in the regions to be reclaimed, aid would be required for some time from those sections which had not been despoiled by the ravages of war. To the various local refugee societies letters were addressed and their co-operation, counsel, and suggestions sought. These organizations welcomed with great cordiality the new movement, and united with it as branches, or entered into harmonious co-operation with it. The American Union Commission, as thus organized, has its headquarters in New York City, but includes auxiliaries in Boston, Baltimore, Pittsburg, Cincinnati, Chicago, Cairo, Memphis, Nashville, Charleston, and other points. Its present officers are Rev. Joseph P. Thompson, D. D., President; Rev. Lyman Abbott, Corresponding Secretary; H. G. Odierna, Esq., of Cincinnati, Western Secretary; H. M. Pierce, LL.D., Recording Secretary; A. V. Stout, Esq. (President of Shoe and Leather Bank), Treasurer; and an Executive Committee of six members. Its fundamental article, approved, as is the whole work and purpose of the Commission, by the Government, states that it "is constituted for the purpose of aiding and coöperating with the people of those portions of the United States which have been desolated and impoverished by the war, in the restoration of their civil and social condition upon the basis of industry, education, freedom, and Christian morality."

About the 1st of October, 1864, the Commission was fully organized for its work, and found at first abundant occupation in relieving the immediate necessities of homeless refugees, who were brought from the South in Government transports and landed upon the wharves in the most destitute condition. Nearly 100,000 have thus been thrown upon the charity of the benevolent during the past seven or eight months. The Commission has gathered them into barracks or "homes" at St. Louis, Cairo, Louisville, Cincinnati, Indianapolis, New York, and other points in the North, fed, clothed, and provided them with medical care, and where it was possible procured for them places, where, by their own industry, they could obtain a livelihood. Experience in other organizations has proved that the retention of large numbers in camps and barracks in a state of idleness, was injurious alike to their health, their morals, and their subsequent efficiency, and hence the Commission has sought as speedily as possible to place all who were able to work in situations where they might obtain their bread by their labor. The extraordinary campaigns of General Sherman, and the sudden collapse of the rebellion, rendered a different system necessary in the Seaboard States. It was neither practicable nor desirable to bring the thousands who flocked into Savannah, Charleston, Wilmington, Newbern, Goldsborough, Petersburg, and Richmond, to the North. They must be aided

in their dire necessity at home, and as soon as practicable assisted to sustain themselves. Provisions were accordingly shipped to Savannah, Charleston, Newbern, Richmond, and other points, and careful and trustworthy agents despatched with them to see to their honest and faithful distribution. Pauperism, or the dependence upon charity without effort at self-help, was sternly discouraged; the cities were distracted, and the applicants visited at their homes.

The Commission has disbursed in money and clothing from its New York office in the past six months, \$70,000, and the various auxiliary boards probably fully as much more. (The Boston Branch has expended \$32,000.)

It has already commenced its arrangements for opening schools in Richmond and other cities of the South, and furnishing seeds and agricultural implements to the impoverished people of the Southern States, that they may be able to resume their long interrupted industry. It will be its aim to do whatever it can to aid in the work of restoration and social reorganization, while carefully avoiding interference with the military and political operations of the Government on the one hand, and the missionary and Sunday school operations of the various religious denominations on the other. A wide scope is opened for its beneficent labors, and conducted as they are, and are likely to be, by men of sound judgment, ardent benevolence, and great practical ability, they can hardly fail to exert a powerful influence for good in the future of the nation.

UNITARIANS. The "Monthly Journal," published by the American Unitarian Association, gives the following information of the number of Unitarian ministers and societies in the United States, in the year 1864: The whole number of societies is 250, an increase of three over last year. In 1830 there were 198 societies; the increase for thirty-five years has been about thirty per cent. Of these 250 societies, 67 have no pastors. The whole number of ministers is 326; this includes professors in colleges, chaplains, &c. 136 of these are unsettled, 198 settled. The year before there were 343 ministers; loss 17. There are two theological schools in the denomination; one in Cambridge, and one in Meadville, Pennsylvania.

The English Unitarians, embracing Unitarian seceders from the Baptists ("General Baptists"), Presbyterians ("Presbytery of Antrim," "Remonstrant Synod of Ulster," and the "Synod of Munster"), and Methodists ("The Christian Brethren"), number about 270 ministers, who have charge of congregations, and about 800 places which have chapels, 140 Sabbath schools, with 15,279 scholars.

Toward the close of the year 1864 an important movement commenced among the American Unitarians toward a more compact denominational organization. On Dec. 7 a special meeting of the American Unitarian Association was held at Boston to discuss the need of increased funds in order to make use of "mani-

fest openings for planting Unitarian churches in towns at the North, working in the army, and entering into the recivilization of the South." Hitherto the receipts of the association, which is now forty years old, had been altogether too small for such an object, those of the preceding year only amounting to \$6,000, and those of the year before to only half that sum. The meeting, with great unanimity, resolved to raise, during the coming year, \$100,000 for denominational purposes. As the existing organization of the denomination was deemed insufficient, it was, upon motion of Dr. Bellows, resolved to appoint "a committee of three ministers and seven laymen, to call a national convention, to consist of the pastor and two delegates from each church or parish in the Unitarian denomination, to meet in the city of New York, to consider the cause of the denomination, and to institute measures for its good." Rev. Dr. Bellows, of New York; Rev. Edward E. Hale, of Boston; and Rev. Charles H. Brigham, of Taunton, were the ministerial members.

UNIVERSALISTS. The General Convention of the Universalists held its session for the year 1864 in Concord, N. H., on Tuesday, Sept. 20th, and organized by the election of the Rev. G. L. Demarest, of Ohio, as President. Communications were read from several State conventions, from which it appeared that Ohio, Indiana, Pennsylvania, and New York, had approved the plan for denominational organization submitted by the last General Convention; that Rhode Island, Iowa, and Illinois had rejected it, while other States had deferred action. It accordingly appeared that the plan was not accepted. The general tenor of the communications was, however, favorable to the plan as a whole; and the pains, industry, and skill of the committee who had prepared it, were duly acknowledged. The principal complaint was that the plan had too many details, that it did not leave enough to the discretion of the States and Associations. The following resolutions on the state of the country were adopted by a unanimous report:

Whereas, The fearful war with which our nation has been scourged for years still continues, and makes additional demands on our courage, energy, patience, and faith, therefore

Resolved, That we recognize in it the punishment of our people for their persistent arrogance and oppression. We cannot, therefore, hope for the return of peace through efforts to rivet anew the chains of the bondman, or to perpetuate the former glaring inconsistencies between our professions of love for liberty, and the support of slavery.

Resolved, That while we deplore the bloodshed, costliness, and agonies of war, and earnestly pray for peace, we yet deem a cessation of hostilities which leaves it unsettled whether treason is to be rebuked, or petted and fondled, a delusion and a snare. If followed by attempts to bribe traitors to return to a nominal allegiance by the promise of surrendering to their vengeance two hundred thousand colored men, who are now bravely battling in our armies for union and order, it would show such dastardly perfidy in our Government as would call down on our nation the stern displeasure of a righteous

God, and condemnation from all good men. Such attempts would sound the knell of our Union, the shipwreck of our country.

URUGUAY. The Oriental Republic of Uruguay, a republic in South America. Its area is about 8,375 geographical square miles, and the population in 1860, 240,965 inhabitants. The city of Montevideo had, in 1860, 87,787 inhabitants; and, in 1862, in consequence of the annexation of Cordon and Aguada, 45,765. According to the estimate of the budget for the eighteen months from July 1, 1860, to Dec. 31, 1861, the receipts amounted to 3,579,802 piastres. The amount of the importations was, in 1861, 9,642,522 piastres, and that of exportations, 7,576,257 piastres.

The republic of Uruguay has been frequently a prey to civil war between the party of the "colorados," and the "blancos" or "blanquillos." On April 19, 1860, a former President of Uruguay, General Venancio Flores, who was regarded as the head of the party of the "colorados," and who, having been exiled, had taken service in the Argentine army, raised again the standard of insurrection. The Legislature, at Montevideo, declared him guilty of high treason, and sent a small force against him, which, however, proved insufficient to expel him from the territory of the republic. In August, 1863, Flores advanced as far as three leagues from Montevideo, but on Aug. 16th he was defeated at Las Piedras by General Medina. Soon after Flores, in turn, defeated General Diego Lamas. In January, 1864, a new President, Mr. Aguirre, assumed the reins of government at Montevideo, and negotiations for terminating the civil war were carried on between the two belligerent parties, but they led to no result.

The war between them assumed larger dimensions and a greater importance, when, toward the close of the year, the neighboring States of Brazil and Paraguay began to take part in it. At the beginning of the insurrection, the Brazilian residents in Uruguay, as well as the people of the adjoining Brazilian province of Rio Grande do Sul, had openly supported the chief of the insurgents, General Flores. This naturally produced a great irritation on the part of the people of Uruguay against the Brazilians. The complaints of the latter induced the government of Brazil to ask for indemnification and guarantees as to the future, and when the government of Montevideo hesitated to comply with these demands, Vice-Admiral Baron de Tamandaré, the commander of

the Brazilian squadron in the Rio de la Plata, on Oct. 11, addressed a circular note to the representatives of the foreign powers at Montevideo, informing them that in consequence of the non-acceptance of the Brazilian ultimatum by Uruguay, he would immediately exercise reprisals by sea, while at the same time the imperial army would be marched into the northern provinces of Uruguay. The representatives of England, France, Italy, Spain, and Portugal, strongly protested against the conduct of Brazil, denied her right to declare a blockade without a previous declaration of war, and declared that they could not allow the search of their vessels by Brazilians.

The sympathies shown by Brazil with the insurrection, called forth a protest from the President of Paraguay, General Lopez. Brazil was suspected by Paraguay, as well as by the northern provinces of the Argentine republic, of an intention to annex the entire territory of Uruguay to herself, and thus to obtain the sole control of the mouth of the river La Plata. The President of Paraguay, therefore, notified Brazil that an armed Brazilian intervention in Uruguay, would be regarded by Paraguay as a case of war; and when this protest was not heeded, war was declared against Brazil.

The government of the Argentine republic sympathized with Brazil and Gen. Flores, but the provinces of Corrientes and Entre Rios declared that they could not oppose the march of a Paraguayan army through their territory to the aid of Uruguay.

The march of the Brazilian army into the territory of Uruguay commenced in November. At the beginning of December, the Brazilian forces, conjointly with those of Gen. Flores, began to lay siege to the Uruguayan fortress of Paysandú, which, after the resistance of a few days and after some bloody engagements, fell into the hands of Flores. Both Flores and the Brazilians then advanced against the capital of Uruguay, and it was expected it would soon fall into their hands, and that the war would be brought to a close early in 1865.

While the Brazilians were advancing in Uruguay, a strong force from Paraguay invaded the adjacent provinces of Brazil, when, from want of communication with Rio de Janeiro, no resistance could be offered to them. As the war operations only commenced in December, 1864, and continued in 1865, we postpone a fuller account of them to the next volume of the *ANNUAL CYCLOPEDIA*.

V

VERMONT. The number of troops furnished by Vermont to the army from the commencement of the war to October 1st, 1864, was 82,710, which showed an enlistment during the first nine months of 1864 of 14,486 men. The

infantry and cavalry regiments of the State, though proportionally few, have borne an honorable part in the war, and proved among the most staunch and trustworthy troops in the service.

The annual State election took place in September, and resulted in the choice of John Gregory Smith, Union Republican, by a majority of 19,415 over Timothy P. Redfield, Democrat, in a popular vote of 44,689. The remainder of the Republican State ticket was elected by similar majorities. In 1863 the majority for Governor Smith was 17,751. The following was the result of the election for members of the Thirty-ninth Congress:

Union Republican.	Democrat.
Dist. 1—F. E. Woodbridge, 2,449.....	S. M. Wells,.....2,667
" 2—J. S. Morrill,.....12,409.....	R. McK. Ormaby, 4,798
" 3—P. Baxter,.....9,408.....	G. Harrington,.....2,281

In the succeeding November the Union Republican electors for President were chosen by a majority of 29,097 in a vote of 55,741, and cast the vote of the State for Abraham Lincoln and Andrew Johnson.

From a report of the Senate Committee on Finance of the Vermont Legislature, it appears that the debt of Vermont amounts to \$1,640,845, or \$5.21 for each person in the State. A claim of \$90,000 against the General Government, if collected and paid, will reduce the debt by that sum. The debt is principally funded, and is payable in 1871, 1874, and 1876. The total expenditures for 1864, including interest on the debt and war expenses, were \$1,228,998, and the receipts were \$981,858, making the increase of the State debt for the year \$238,447. Upon an examination of the financial resources of the State, it appears that, in increase of population and in many of the branches of industry, Vermont is behind the other New England States. The last census shows that the ratio of increase in population is only 0.31 per cent., while the other New England States range from 2.65 to 42.10 per cent. In manufactures Vermont also compares unfavorably with the other New England States, but makes a better record in flour, meal, and lumber. The valuation of the State was increased but 32.88 per cent. In the other States the increase has been from 42 to 185 per cent. The committee attribute this unfavorable condition of affairs to the laws of Vermont, which do not encourage business enterprise. They allow the seizure of property by attachment, and afford no relief to the unsuccessful man of business by laws of insolvency. Hence many of the enterprising business men of the State have sought homes elsewhere.

On November 1st the Legislature reelected the following board of judges of the Supreme Court: Chief Justice, Luke P. Polard; Assistant Justices, Asa O. Aldis, John Pierpont, James Barrett, L. C. Kellogg, and Asahel Peck; W. G. Veavey, of Rutland, was elected reporter of the decisions of the Supreme Court.

On October 19th the town of St. Albans, on the Vermont Central Railroad, about 15 miles from the Canada frontier, was the scene of a raid, accompanied by wanton bloodshed, by

Southern refugees from Canada, under the leadership of one Young, a rebel officer, which for a time filled the northern part of the State with alarm. At 8½ p. m. a body of between 80 and 40 rebels, well organized and armed, who had been quietly assembling during the previous week, made a combined attack on the St. Albans, Franklin County, and First National Banks. Not more than one or two persons were in any one of these institutions at the time; and these being easily overpowered, the raiders were enabled to abstract a sum in bank notes amounting in the aggregate to \$211,150. They then seized upon all the horses they could find, either in the streets or in livery stables, and mounting, rode off toward Canada. The whole affair occupied less than twenty minutes. Previously to their departure they wantonly fired upon a number of unoffending and unarmed citizens, of whom several were wounded, one fatally. While robbing the banks, they stated that they were acting under orders from the rebel General Early, and were retaliating for acts committed by Federal troops in the valley of the Shenandoah. The robbery was skilfully planned for the day succeeding the market day, when the town was unusually dull; and to the unexpectedness with which it came must be attributed its success. Secret attempts had also been made to fire the town, which fortunately failed.

As soon as the inhabitants had recovered from their surprise, a body of men was at once organized to pursue the raiders, who, however, being well mounted, had a considerable start. The authorities of the State were also promptly notified, and men and arms arrived in large numbers in St. Albans within a day or two. The neighboring border towns immediately took every precaution to guard against similar attacks, and for several days an active system of patrols was maintained. As a further means of arousing the vigilance of the country, the St. Albans' banks offered a reward of \$10,000 for the recovery of the plunder and the capture of the raiders. These were vigorously pursued by the armed citizens, dropping by the way a considerable number of the purloined bank notes, but succeeded in escaping over the frontier into Canada, where nearly the whole gang were eventually captured either by the armed citizens of Vermont, who started in pursuit, or by the Canadian authorities. The latter, in accordance with instructions from the Governor General, Lord Monck, showed considerable activity in procuring the arrest of the raiders. Those of the latter arrested by American citizens were at once turned over to the local authorities. The legal proceedings to which the raid gave rise in Canada are described under the head of FOREIGN RELATIONS.

VINTON, MRS. CALESTA HOLMAN, an American missionary. She was born in Union, Conn., in 1809, died in Rangoon, Burmah, Dec. 20, 1864. She married Rev. Justus H. Vinton,

then under appointment as a missionary to the Karens in Burmah, April 9, 1834. Her early education was obtained at the Wilbraham (Mass.) Academy, but for some months previous to sailing for Burmah, she had been studying the Karen language with a native teacher at Hamilton, N. Y., and on arriving at her field of labor she could converse intelligibly in Karen. She possessed decided talent as a writer and teacher, was a poet of fair ability, as her Karen hymn books gives evidence. Her energy, zeal, and perseverance enabled her to accomplish more than most female missionaries in the instruction of the Karens. She was very successful in teaching the Karen women, who, under her instruction, adopted the habits, dress, and refinement of manners of civilized life, and have done honor to their instructress. Mrs. Vinton visited the United States in 1848 for the restoration of her health, and remained two years, when she returned to her field of labor. In 1862 she again returned to the United States for a few months, but returned with renewed energy to her work.

VIRGINIA. The questions which engrossed the attention of the authorities of Virginia related exclusively to the war; its success absorbed all their thoughts. The Legislature was urged to pass such laws as would bring into the field all the able-bodied men not necessary to the State Government. Thus far every officer had been exempt, although without any duties to perform. Between forty and fifty counties of the State were within the Federal lines, and the original State officers in these counties had fled to Richmond. The average number of officers in these counties was about sixty, and it was estimated that they would form a force of two thousand men. By the decisions of the courts they were exempt from military service, notwithstanding they had no civil duties to perform. The Governor thus viewed the subject:

If all officers designated in the Constitution, and in the laws made in pursuance thereof, are to be exempted because they are State officers; if Justices of the Peace, who, by-the-by, were never exempted until the 1st of October, 1862, having from the revolution to that period been required to perform military duty; if all sheriffs and clerks and their deputies, all commissioners of the revenue, all surveyors and Commonwealth attorneys, all constables and overseers of the poor, all county agents for supplying soldiers' families, all salt agents, commercial agents, etc., all employés of banks, cities, towns, etc., are to be exempt, indiscriminately and without reference to their necessity, then, indeed, in the language of the decision so frequently quoted, the spectacle might be presented of a nation subjugated and destroyed at a time when it had within its limits citizens amply sufficient to defend it against all the assaults of the enemy, but whose services could not be commanded because, forsooth, Government had contracted with them that they should not be required to serve in the army.

The Governor further recommended the passage of a law authorizing the issue of a proclamation warning all citizens of Virginia in foreign parts to return without delay to the State;

failing in which, beside personal penalties their property of every description should be confiscated, and their families sent into the Federal lines.

The free negroes became quite disorderly, and in the towns, especially Richmond, they were guilty of many outrages on persons and property. It was said: "They are found co-operating with the enemy, and occasionally indulging in the utterance of treasonable sentiments and threats against their fellow-citizens."

The question of arming the slaves created great discussion. It was said that the North had exhausted all her floating population, and openly recruited her armies on the continent of Europe. Not content with this she had seized their slaves, and in violation of all civilization had armed them against their masters. Under every disadvantage the war had been protracted deep into its fourth year, and the Southern people found themselves looking around for material to enlarge their armies. Whence was it to come? The laws of natural accretion would not furnish a sufficient supply of men. Foreign countries were in effect closed. Recruiting from the prisoners would not, except to a limited extent, supply the wants, and public attention naturally turned to the slaves as a ready and abundant stock from which to draw.

Some considered this policy as giving up the institution of slavery; others declared that if the slaves were put into the ranks it would drive out the whites from them, and diffuse dissatisfaction throughout the Confederacy. In reply it was said that the policy would effectually silence the clamor of the poor man about this being the rich man's war; and that there was no purpose to mingle the two races in the same ranks, and that there could not be a reasonable objection to fighting the enemy's negroes with their slaves.

As to the abandonment of slavery, it was said that it had been already proclaimed to be at an end by the North, and would undoubtedly be so if the South was subjugated, and that by making it aid in the southern defence, it would improve the chance of preserving it.

There was a unanimous opinion in favor of using the slaves in the various menial employments of the army, and as sappers and miners and pioneers, but much diversity as to using them as soldiers.

The measure was finally approved by the Legislature of Virginia, and adopted by the Congress at Richmond, but too late to be of any advantage.

A comparison of the census of Virginia, taken in 1860, with the census of 1863, showed that of the number of slaves in the whole State in 1860, only 3,803 had been lost above the natural propagation and other increase. Of horses in that portion of the State under Confederate control the loss was 25,201. In 1860 the number of cattle returned for taxation in the entire State was 1,021,182, or ninety-seven for every

one hundred white persons. In 1868 the number of cattle within the territory, free from the occupation and incursions of the Federal army, was 507,152, to which add 8 per cent., the usual difference between the actual and taxable numbers, and there were 547,724 cattle within Confederate control in the last-mentioned year, which is one hundred and five head of cattle to every one hundred white inhabitants.

The returns show an increase of 72,386 sheep, and a loss of 156,970 hogs in the counties and corporations under the rebels.

At an election for State officers William Smith was chosen as the successor of Gov. John Letcher.

An address was issued to the soldiers of Virginia by the Legislature in March, urging to extreme sacrifices and efforts of bravery as certain to be followed with triumphant success.

The desolation which followed the track of the armies is very graphically described by one who beheld them, as follows:

When we get to Hamilton Crossing the desolation of war breaks upon you. A few trees remain upon the hills near the side of the depot; but there is not a fence or an inhabited house on the way to Fredericksburg. A few cattle may be seen grazing on the rich plains, which bear now but crops of luxuriant weeds. These cattle belong to the people of Fredericksburg, who club together and hire a poor old man to attend them while grazing.

There are no hands to work in the fenceless fields; no signs of animated life about the deserted houses. The drowsy caw of the cock, the neighing of horses, the cawing of crows, and the laughter of children in the yard, and the "wo-haw" of the plough-driver, are no longer heard in the blasted region. All is still as death for miles and miles under the sweet autumnal sun.

Fredericksburg itself is torn by a hurricane. Much of it has been burnt, and the tall chimneys standing all alone tell a woeful tale of ruin. Part of the town is destroyed by fire caused by shell, and part by the torch. All the lower and upper portions of the town have been so shattered as to be uninhabitable; the stores have been gutted of their shelving and counters to make dry places for the countless thousands wounded at the Wilderness and Spottsylvania to lie on.

The churches have been repeatedly struck, and so have most of the private dwellings. I counted thirty holes in the fine mansion of Douglas Gordon, which was nearly complete before the war broke out. A shell has passed diagonally through the house in which I stayed, and one had exploded in the parlor over which I slept. Looking out of my bedroom window I saw naked chimneys and deserted homes in every direction.

I went to Marye's Hill, and saw the famous stone fence which served as a rampart for our men. I walked over the wide fields which the enemy had to pass before they got within range of our rifles, and stood under the tree which Cobb leaned against when he was killed. This tree is just behind the house of a Mr. Stephens—a small frame building—which must have at least a thousand bullet holes through and through it.

The stone fence is at the bottom of a hill, and on that hill is the fine old homestead of the Maryes, now gone to wreck, with countless apertures made by shot and shell, and open to all the winds that blow. Ah, it was a sad thing to tread the deserted halls and chambers of the old house, and hear only the echo of your own footsteps.

I went over into Stafford County, opposite Freder-

icksburg, and there is a wide, wild scene of devastation—neither fences nor trees for leagues on leagues, houses deserted and burnt, and so many roads to the enormous camps of Hooker, which extended nineteen square miles, that the oldest inhabitants are in danger of losing themselves in their own country. The Lacy House is a baronial pile in the extent of its buildings, and its terraced grounds and gardens are in keeping.

Ruin reigns there also. The walls of the large old-fashioned rooms, and even the pillars of the porches, are scrawled and bescribbled with obscure names and obscene phrases and pictures. Further back on high hills, commanding the whole country, are the walls of the Phillips House, which was burnt by Stoneman. What a picture of ravaged beauty is to be seen from the heights on which this house stands!

Strange to tell, Stafford County, naturally sterile and sparsely peopled, is now richer and more thickly settled than it has been since the colonial days. It is a debatable land, in which neither Confederate nor Federal rule is acknowledged, and it is filled with deserters who have grown rich by gathering and selling the immense debris of Hooker's camps to Washington or to Richmond purchasers, as happened to be most convenient; for these lawless people care little for either side.

I saw in Fredericksburg, and at Hamilton Crossing, great piles of old iron and fragments of tents, blankets, and overcoats, which were just ready to be sent to Richmond. A number of refugees have returned to Fredericksburg, which contains now some 600 or 700 souls, principally women and old men.

VIRGINIA, EAST. The Convention called in 1868 to assemble at Alexandria on February 18th, 1864, to amend the Constitution of the State of Virginia, was duly held. The following is a list of the members representing all the counties of Old Virginia under Federal control, but not included in West Virginia:

Alexandria County—Walter L. Penn.

Alexandria and Fairfax Counties—S. Ferguson Beach.

Fairfax County—John Hawthurst.

Norfolk City and County—Dr. L. W. Webb and W. W. Wing.

Portsmouth City, County, and Senatorial District—G. R. Boush, P. G. Thomas, and LeRoy G. Edwards.

Loudoun County—Dr. J. J. Henshaw, James M. Downey, and Lieut. E. R. Gover.

York, Warwick, and Elizabeth City Counties and City of Williamsburg, Charles City, James City, and New Kent Counties—T. S. Tennis and Robert Wood.

Accomac County—Dr. A. Watson and W. Dix.

Northampton County—Wm. P. Moore.

An organization was effected and committees appointed, as usual with such assemblages. The Committee on Emancipation duly reported the following amendment to the Constitution of the State of Virginia, as sections to be incorporated in that instrument:

1. Slavery and involuntary servitude, except for crime, is hereby abolished and prohibited in the State forever.

2. Courts of competent jurisdiction may apprentice minors of African descent, on like conditions provided by the law apprenticing white children.

3. The General Assembly shall make no law establishing slavery or recognizing property in human beings.

4. This ordinance to take effect and be enforced from its passage.

This was adopted, and comprised the most important business before the Convention.

A session of the Legislature was held pre-

vously. On the evening of February 4th both Houses met in joint session to elect a Secretary of State and Treasurer. L. A. Hagans was chosen Secretary, and J. J. Henshaw, Treasurer. The total vote on joint ballot was 14, of which Henshaw received 8 and his opponent 6.

Notwithstanding the election of a Governor (Pierpont) and other State officers, and the organization of a Legislature, the authority of the Government appears to have been very little respected by the military officials. The following protest of Gov. Pierpont explains one of the difficulties which occurred:

EXECUTIVE DEPARTMENT, }
ALEXANDRIA, VA., June 22, 1864.

To the Loyal People of Norfolk, Virginia:

I have received reliable information that General Shepley, commanding at Norfolk, acting under the orders of General Butler, intends ordering the opening of a poll in that city on the 24th instant, to take a vote of the people as to whether they desire the continuance of civil government, and that, should a majority of the votes cast be against the same, it is the intention of the commandant of the post to prevent, by military force, the trial in the Circuit Court of said city some thirty odd indictments against liquor vendors for violations of the license law of the State.

I know of no authority in the State or Federal laws authorizing the people to abrogate the civil laws of the State in any city or county, and such act can only be considered revolutionary. The Constitution of the United States guarantees to each State a republican form of government. That form of government exists in Norfolk at this time, and to break it up would only be to substitute military government or rule in its stead, which would clearly be a violation of the Constitution of the United States and its guarantees to the people. No loyal citizen, therefore, is expected to vote on the proposed question.

F. H. PIERPONT, Governor.

The election was duly held, and its result announced in an official order of Gen. Butler, as follows:

HEADQUARTERS DEPARTMENT VIRGINIA AND NORTH }
CAROLINA, IN THE FIELD, June 20, 1864.

The loyal citizens of Norfolk determined, with a unanimity almost unexampled, by a vote of three hundred and thirty to sixteen, against the further trial of the experiment of a municipal government which gave as results to them only taxes and salaried officers, without any corresponding benefits.

It will be observed that this vote was more than three times as large as that by which the experiment of civil government was set on foot. Some doubts upon the legal formality of this vote were attempted to be cast by interested parties, and proclamation was made that the adherents and salaried officers of the restored Government should not vote upon the question submitted. Yet that it was an overwhelming expression of the opinion of the citizens is seen from the fact that three hundred and fifty votes were cast upon the questions, while only one hundred and nine were cast by all parties for their respective candidates to fill the several civil offices.

Now, as there were at least two sets of candidates voted for, containing a list of some forty-five officers who would have place in the civil government in each set, it would seem that but twenty votes were cast for city officers except by those who were interested in being elected—assuming always that the men running for office in a city vote for each other.

It is the duty and province of the Government of the United States to afford protection to all its citizens in the manner most effectual and beneficial to them, and, so far as consistent with the Constitution and laws, in such manner as they desire; and all experience has shown that, in a disorganized state of society, incident upon a state of war, and especially civil war, a military government, properly administered, affords the best protection to property, liberty, and life.

Whether that military government has been properly administered in the city of Norfolk, during the two years that it has been under military rule, and especially whether that military government has been properly administered during the past eight months, and has secured the substantial benefits of good government in the city of Norfolk, it is not proper for this order to state.

The citizens of Norfolk have spoken upon that subject with sufficient distinctness to inform the judgment of the Commanding General.

Therefore, it is ordered, That all attempts to exercise civil office and power under any supposed city election, within the city of Norfolk and its environs, must cease, and the persons pretending to be elected to civil offices at the late election, and those heretofore elected to municipal offices since the rebellion, must no longer attempt to exercise such functions; and upon any pretence or attempt so to do, the Military Commandant at Norfolk will see to it that the persons so acting are stayed and quieted.

The Judge of the Circuit Court, before whom the cases alluded to by Gov. Pierpont were to be tried, made a lengthy statement of the difficulty, with the opinion of Attorney-General Bates against the action of the military, and the promise of the President to decide the matter. But the military authorities prevailed. Many other difficulties also occurred.

VIRGINIA, WEST. The vote cast in West Virginia at the Presidential election was 33,590; of which Mr. Lincoln received 23,152, and Gen. McClellan 10,438. In the Legislature there is no division of parties. The regular State election took place in October. Gov. Boreman was reelected without opposition, having received 19,098. The Republican members of Congress were also chosen with very little opposition. The State fortunately escaped from the alarming military invasions under which it had suffered in previous years, and remained comparatively settled and undisturbed. The most interesting event in its history was the development of vast supplies of Petroleum. (*See PETROLEUM.*)

W

WADSWORTH, JAMES SAMUEL, a Brigadier-General of United States volunteers, born in Geneseo, Livingston County, N. Y., October 30th, 1807, killed in the battle of the Wilderness, May 6th, 1864. He was the son of James

Wadsworth, an extensive landowner and philanthropist of Geneseo, under whose care he received a thorough rudimentary education, after which he was sent to Harvard College, and thence to Yale College, where he completed his

studies. Soon after graduating he entered upon the study of law in Albany, finishing his course in the office of the great statesman and lawyer, Daniel Webster, and was admitted to the bar in 1838, but did not practise his profession, as the charge of his immense estate required his whole attention. A few years later Mr. Wadsworth turned his attention somewhat to local politics. A Federalist by education and a Democrat by conviction, he early took part in the "Free Soil" movement that divided the Democracy of the State, and gave a zealous support to the Presidential candidate of that party in 1848, and to the Republican candidates of 1856 and 1860. Like his father, he manifested a deep and active interest in the cause of education. He founded a public library at Geneseo; was a liberal subscriber to the endowment of Geneseo College; aided in the establishment of the school district library system, and in every way did what lay in his power to relieve suffering and diffuse the benefits of our free institutions. Acting as a commissioner to the Peace Convention held in Washington, in 1861, under an appointment from the Legislature of New York, when it became evident that war was inevitable, he was prompt to offer his services to the Government. When communication with the capital was cut off, he chartered two ships upon his own responsibility, loaded them with provisions, and proceeded with them to Annapolis, where they arrived most opportunely to supply the pressing necessities of the Government. Commencing his military career as a volunteer aide to Gen. McDowell at the first battle of Bull Run, upon the recommendation of that General, Wadsworth was appointed Brig.-Gen. of volunteers August, 1861, and in March, 1862, became Military Governor of the District of Columbia. In the election of Governor of New York, in November, 1862, Gen. Wadsworth was the Republican candidate, but was defeated by Mr. Seymour. In the following December he was assigned to the command of a division in the Army of the Potomac. At Fredericksburg and Chancellorsville he displayed great military skill, and at Gettysburg his division saved the first day. Upon the reorganization of the Army of the Potomac for the campaign of 1864, Gen. Wadsworth was assigned to the command of the fourth division of the fifth corps, at the head of which he bravely met his death.

WALDO, DANIEL, an American clergyman, born in Windham, Conn., September 10, 1762, died at Syracuse, N. Y., July 30, 1864. His early years were spent in laboring upon his father's farm, and attending a district school in the neighborhood. He remained at home till the year 1778, when, at the age of sixteen, he was drafted as a soldier for a month's service during a time of imminent peril at New London, and soon after enlisted as a volunteer in the service of the State. At the battle of Horse-neck he was captured, taken to New York, and

imprisoned in the "Sugar House," then the grand depot for prisoners, but after a confinement of two months was exchanged. Subsequently he resumed his labors on the farm, continuing there until he was twenty-one. At the close of the war he commenced study, and graduated at Yale College in the class of 1788. On leaving college he entered upon the study of theology under Dr. Levi Hart, of Preston, Conn. After prosecuting his studies for about a year, he was licensed to preach by the Association of Windham County. In May, 1792, he was ordained and installed pastor of the church at West Suffield, Conn., where he remained, with an interval of a few months of missionary labor, until 1809, when he resigned his charge, and after preaching at Colchester, Salem, and Cambridgeport, Mass., went to Rhode Island, under the patronage of the Society for Promoting Christian Knowledge, visiting schools and laboring in the cause of education. Subsequently he preached at Harvard, Mass., and finally at Exeter, R. I., where he labored twelve years, resigning at the end of that period on account of the inability of the parish to pay his salary. He then retired from any stated charge, frequently preaching, however, for various ministers. In 1856 Mr. Waldo, then ninety-four years of age, was elected Chaplain of the House of Representatives, discharging the duties of that position with general acceptance. His mind seemed to operate with a freedom little, if at all, diminished; and he died not from a decay of physical powers, but from the effects of a fall, leaving a record bright with patriotism, generosity, and purity of life.

WALLACK, JAMES WILLIAM, an English actor, born in London, August 24, 1795, died at New York, December 25, 1864. He inherited his theatrical vocation from his parents, both of whom had attained distinction upon the stage. His father, William Wallack, was a comedian of excellent reputation, and his mother, Elizabeth Field, had played for many years with Garrick. It was intended that he should enter the navy, but the fondness for his father's profession so strongly manifested itself in childhood that the effort to overcome it was abandoned. He joined the "Academicals" in the establishment in Leicester Street, where juvenile performances were regularly given. His talent was observed by Sheridan, who transferred him, at the age of twelve, to the regular company of Drury Lane Theatre, where he remained until the destruction of that house by fire, steadily rising in public favor. He then visited Ireland; but, on the opening of the new Drury Lane, returned to play Laertes to the Hamlet of Elliston. He was then eighteen years old. Not long after, during the engagement of Kean, he was given the characters of Macduff, Edgar, Richmond, Iago, and others second only in importance to those of the great tragedian of that day. In 1817 he was married to the daughter of Mr. John Johnstone, a celebrated Irish actor, shortly after which he visited America for the

first time. He appeared in "Macbeth," at the Park Theatre in New York, on the 7th of September, 1818, and achieved an immediate and remarkable success. For two years he acted in this country, and in 1820 returned for a single season to Drury Lane. The popularity and prosperity he had experienced in America led him to adventure a second visit in 1822, when he again met with a brilliant New York reception. While journeying to Philadelphia, the stage coach in which he travelled was overturned, and he suffered a compound fracture of the leg, which interrupted his professional labors for eighteen months, and the effect of which was always partially discernible throughout his life. This recess was passed in England, but his reappearance took place in New York, where he had left his wardrobe and personal effects. The New York public had shown great regret at his misfortune, and assembled in overflowing numbers to welcome him, all the more heartily because of a general conviction that his thorough recovery was impossible, and that his future career must be limited to the representation of a few exceptional parts. He came forward in the character of Captain Bertram, an old sailor on crutches, and the apprehensions of his friends thus seemed to be realized; but in the second piece, "My Aunt," he electrified the audience by bounding upon the stage with an elasticity and vigor hardly surpassed in his earlier engagements. After the close of this visit Mr. Wallack became stage manager of Drury Lane Theatre, where he remained for a considerable number of years, making only occasional appearances on this side of the Atlantic. His popularity was such, however, that in certain cities he was enabled to play four long and brilliant engagements in a single season. In 1852 he ceased to travel as a "star," and became manager of the theatre which now stands near the corner of Broome Street and Broadway, to the advancement and improvement of which he honorably devoted nine years. During this period he was the acknowledged leader of dramatic art in America, and his theatre rose to a rank which no other had ever held in this community, and which, we are disposed to believe, no other had ever merited. In 1861 he built a new theatre, at the corner of Broadway and Thirteenth Street, the success of which has been deservedly uninterrupted. The same conscientious adherence to the most refined purposes of the drama, and the same strict care, delicate taste, and sound judgment which were conspicuous in his administration of the old establishment, have been exhibited in perhaps even a greater degree in the new. His eminence as an actor was a well-established fact. His reputation was highest in dramas of a romantic and picturesque order, in which his vigor and energy produced extraordinary effects. His Shakespearian personations, although striking, and popularly successful, were not remarkable for breadth and majesty, but seemed rather to be composed of a series of delicate, carefully

studied, and elaborately wrought points, worked together with exquisite skill, like a piece of intellectual mosaic work. His Rolla, in "Pizarro," is universally pronounced to have been an unrivalled performance of its kind. The last representations in which he took part were at his theatre near Broome Street, where, in 1859, he played most of his principal parts, besides sustaining for upward of a hundred nights the leading character in "The Veteran." His last appearance in any public capacity was at the close of the season of 1862, at the new theatre, when he delivered a brief address to the audience. Since that time he has only been seen on special occasions in his box, from which it was his habit, when not prevented by illness, to overlook the representations of all "first-nights." To the last, his mind was intent upon the practical supervision of his theatre. His death will be a serious and almost irreparable loss to the dramatic interests of the community, no matter how powerfully his influence and teaching may continue to guide the destinies of his theatre.

WATSON, WILLIAM R., died at Providence, R. I., Aug. 29, 1864, aged 64 years. He was born in South Kingstown, in Rhode Island, Dec. 14, 1799. He pursued his early classical studies at the Plainfield (Ot.) Academy, and was graduated at Brown University in 1823, in the same class with Chief Justice Ames of R. I., George D. Prentice, the distinguished editor of the "Louisville Journal," and Judge Mellen, of Mass. He studied law with Samuel W. Bridgham, in Providence, and was admitted to the bar, but engaged only to a very limited extent in the practice of his profession. His life was devoted preëminently and almost exclusively to politics. For nearly forty years he was one of the most active and prominent politicians in Rhode Island, and probably no individual ever exerted a greater influence in its local politics. In June, 1827, he was chosen by the General Assembly, then controlled by the National Republicans, to the office of Clerk of the Court of Common Pleas for the County of Providence, at that time the most lucrative office in the State, and in consequence a place much contended for by political parties and their rising favorites. This office he held until May, 1833, when he was displaced by a combination of opposing parties. He, however, regained the office in 1835, but held it only for a single year. In 1841, on the accession of President Harrison, he was appointed Collector of the port of Providence, which office he held till the beginning of President Polk's administration in 1845. In 1849 he was again appointed to the same office by President Tyler, and retained it four years, till he was removed by President Pierce. Through his influence while Collector of the port of Providence, a construction is now given to a provision of the tariff of 1833, relating to the compensation of certain collectors, adverse to the written opinions of John J. Crittenden and Reverdy John-

son, both given while those eminent lawyers were holding the office of Attorney-General of the United States. In 1854 he was chosen Secretary of State in Rhode Island, but lost his election the following year, when the "Know Nothing" or Native American Party, of which order he was not a member, swept the State by such immense majorities. In 1856 he was chosen by the General Assembly State Auditor, and continued in that office until May, 1868.

Mr. Watson was also, during much of his life, a writer for the political press, and in several instances, usually at seasons of election, for brief periods, conducted as editor certain papers with which he was politically connected. The most elaborate of his writings were a series of papers, first published in the "Providence Daily Journal" in 1844, over the signature of "Hamilton," which were afterwards collected and printed in a pamphlet form. The doctrines then held by the Whig party, of which he was ever the devoted champion in Rhode Island, were there explained and vindicated with remarkable force and vigor. Amidst the personalities of local politics he did not fail to make many enemies, but none ever questioned the integrity or the ability with which he discharged the duties of the varied public offices which he held. Mr. Watson married a daughter of Caleb Earle, of Providence.

WEST, Rev. NATHANIEL, D. D., an American Presbyterian clergyman, born in the north of Ireland, September, 1794, died in Philadelphia, Penn., Sept. 2, 1864. His father was of English and his mother of Scottish descent. Though not favored with a collegiate or university education, he was an excellent scholar, and thoroughly versed in English studies and literature. He received his theological training under the immediate instruction of Dr. Chalmers and Dr. Turner, of Edinburgh, and after receiving ordination labored for several years in that city as a missionary, and was one of the founders of the first temperance society there. In 1834 he came to the United States, and was installed as pastor of the Presbyterian Church in Meadville, Penn., and subsequently was a pastor successively of Presbyterian churches in Monroe, Mich., North East, Pittsburg, McKeesport, and Philadelphia, Penn. In 1858 he received the degree of D. D. from Jefferson College, Penn., and was also honored by being elected a corresponding member of numerous literary and scientific societies. At the outbreak of the rebellion he resigned his pastoral charge in Philadelphia, and devoted himself to the service of his adopted country. In May, 1862, he was appointed by the President chaplain of the Satterlee United States General Hospital at West Philadelphia, one of the largest military hospitals in the United States, and the thorough manner in which he performed his arduous and exhausting duties at this hospital it is believed hastened his death. Dr. West's published works were: "The Ark of God the

Safeguard of the Nation," 1850; "Popery, the Prop of European Despotisms," 1852; "Babylon the Great," 1852; "Right and Left Hand Blessings of God; or a Cure for Covetousness," 1852; "Complete Analysis of the Holy Bible," royal 8vo, 958 pp., 1853, and four subsequent editions; "The Overturning of Tyrannical Governments," preached before and published at the request of Louis Kossuth when in this country, and by his order and at his cost translated into Magyar; "The Causes of the Ruin of Republican Liberty," 1862.

WINSLOW, HUBBARD, D. D., an American author and educator, born in Williston, Vt., Oct. 30, 1799, died at Williston, August 13, 1864. He prepared for college at Phillips Academy, Andover, Mass., and graduated at Yale College in the class of 1825, standing among the first three of his class in both institutions. He studied theology at New Haven, under Dr. Taylor, and preached a short time at Litchfield, Conn. Receiving various calls, he was settled at Dover, N. H., Dec. 4, 1828. Married May 21, 1829, the daughter of Hon. Pliny Cutler, Boston, Mass. During his settlement at Dover, where his ministry was very prosperous, he published his first volume, entitled, "Doctrine of the Trinity," which gained him extensive reputation, exciting interest abroad, and provoking a letter from Dr. Chalmers of Edinburgh, who pronounced it the ablest treatise in his judgment on that topic. In 1832 Mr. Winslow succeeded Lyman Beecher as pastor of the Bowdoin Street Church, Boston, where he remained twelve years. During this period he visited Europe and spent some time perfecting himself in the languages, and cultivating the acquaintance of leading men in England and on the continent. He delivered numerous addresses on scientific, literary, and religious topics, in various parts of the country. Among his published efforts were an oration before the city authorities of Boston, July 4, 1838; before the "Ancient and Honorable Artillery Company," 1853; address before the Boston Society of Natural History, 1839. He interested himself largely for the welfare of young men, delivering lectures on practical topics, and publishing the "Young Man's Aid," which was republished in several languages, and received a sale of over one hundred thousand copies in England alone. A very successful pastorate was a result of his labors. Over one thousand additions were made to his communion, and the records of the Massachusetts Association show that no Congregational church in that State has ever exceeded the prosperity of Bowdoin Street Church under Mr. Winslow. As a controversialist in theology and philosophy he ranked high. His defence of Dr. Taylor against Bennett Tyler, his "Philosophical Tracts," "Controversial Theology," etc., placed him among the foremost of the New England thinkers. His published addresses on the various duties of citizens, pertaining to Church and State, appeared during his pastorate, attracting

attention abroad. During this period he published, among other works, the following: "Christian Doctrines;" "Design and Mode of Baptism;" "Natural Science and Revelation;" "Appropriate Sphere of Woman;" "Aids to Self-Examination;" "Christianity Applied to our Social and Civil Duties;" "Educational Addresses," etc.

In 1844 Dr. Winslow's health failing, he resigned pulpit labors, and for nine years conducted the Mount Vernon Institute for young ladies, Boston, succeeding Jacob Abbott and E. A. Andrews, LL.D. During this period he delivered numerous addresses on educational topics, contributed to the Educational Journal under Horace Mann, edited the Religious Magazine, and furnished articles to various reviews. For many years he was a prominent member of the Boston School Committee, was associated with the Board of Examiners of Harvard University, and acted as trustee in various colleges and seminaries. The "Intellectual Philosophy" appeared in 1851, and received the encomiums of thinkers, and favor from the public. In 1853 he again visited Europe, spending ten months in examining the various institutions of learning. Returning, he delivered various lectures on Europe and the matters of State and religion. The "Moral Philosophy" (published by Appleton) appeared in 1856, and soon became a standard text-book in our colleges and high schools. Fourteen editions of his philosophies have already appeared. In 1857 he assumed the pastorate of the Presbyterian Church, Geneva, N. Y. During two years, nearly two hundred additions were made to his parish. He wrote the "History of the Geneva Presbyterian Church." His health failing, he removed, in 1859, to New York, where he resided at the time of his death. He became a constant contributor to the leading journals, and wrote a number of the prominent articles in our reviews on philosophical subjects. "The Hidden Life," appeared in 1862, and was at once classed among devotional volumes of a high order.

The mind of Dr. Winslow was vigorous and comprehensive, discriminating and evenly balanced, very active and penetrative. His attainments were quite universal in their character, but he excelled in the domain of philosophy and theology. His pulpit gifts were of the persuasive and didactic as well as the argumentative order; and a deep, earnest spirituality, pervaded all his utterances. He led a life of singular purity and simplicity of character; and he possessed pleasing gifts of a social nature.

WINSLOW MYRON, D.D., LL.D. An American Missionary and Oriental scholar. Was born at Williston, Vt., Dec. 11, 1789, and died at Cape of Good Hope, October 22, 1864, while returning home from India. He graduated with the valedictory at Middlebury College (Vt.) in 1815, and at Andover Theological Seminary in 1818. In 1819 he sailed as a missionary of the A. B. C. F. M., to Ceylon, where he established a mission at Oodooville, founded a Seminary,

and after seventeen years of toil removed to Madras, where he established the chief mission of the Madras Presidency, containing a population of 80,000,000. Dr. Winslow acted as General Secretary of that and other missions, and financial agent of the American Board. He also supervised and superintended the printing and editing of various educational and religious works in the Tamil tongue. Among his chief labors was the translation of the Bible into Tamil. He also wrote the "History of Missions," "Memoir of Mrs. Harriet L. Winslow," "Hints on Missions," and carried on a large correspondence with European and American journals. The "Missionary Herald" and other religious periodicals contain a continuous correspondence from him of over forty years. Dr. Winslow interested himself largely in educating the natives of his mission. To this end he founded the Madras College and was President of it. It has a course of study similar to the first-class English and American colleges, and numbers between three hundred and four hundred students. But the chief work of Dr. Winslow was his great *Tamil-English Lexicon*, which he recently completed, and is published in the finest style of typography at Madras. This work has received the encomiums of native, English, and American scholars, and ranks second to no other philological achievement of the age. Not merely for the profound scholarship and extensive learning displayed in its pages, but for the vast influence it exerts in civilizing and christianizing India, has it called forth the thanks of the religious world. In the preparation and completion of this work, Dr. Winslow spent upwards of twenty years of continuous toil. It is a quarto of one thousand pages, three columns to a page, and contains sixty-eight thousand words and definitions. Of these, nearly half owe their lexicographic birth and position to the author. Not merely are definitions given, but shades of meaning and expressions unknown to our language. The dictionary contains the mythological, scientific, and poetic terms of the Tamil; names of heroes, gods, authors, poets, &c.; geographical and historical information. The work is a complete and comprehensive dictionary, admitting the learner into a careful and discriminating knowledge of the Tamil. Dr. Winslow adopted an entirely original method and arrangement in regard to the verb, the most difficult part of speech in all lexicography. He gives the root of the verb, as of other parts of speech, for the leading word. He says that this is the *imperative singular*, and that all the parts of the verb flow naturally from that. He informs us that "this arrangement, though the most simple as well as most philosophical, has not been adopted in any dictionary." This work is most truly a thesaurus of oriental learning. Dr. Winslow devoted more study to the Eastern languages than any other American. The Reformed Dutch Church Mission, in their resolutions of thanks, said: "We regard this work as a noble contribution to oriental litera-

ture, a boon to all students and laborers in the Tarnil field, and a crown of honor to its author."

Dr. Winslow received the degree of D.D. from Harvard College in 1858, and that of LL.D. from Middlebury College in 1864. He was brother of Rev. Dr. Hubbard Winslow, the author, and of Rev. Dr. Gordon Winslow of the Episcopal Church.

WISCONSIN. This agricultural State engaged in the war with ardor, and has vigorously responded to all the calls for troops which have been made since its commencement. Wisconsin has sent to the field twenty-four regiments of infantry, four regiments and one company of cavalry, one regiment of heavy artillery, thirteen batteries of light artillery, and one company of sharpshooters, making an aggregate of seventy-five thousand one hundred and thirty-three men. Of this number thirty-two thousand nine hundred and seventy have been lost to the service by deaths, discharges, and desertions, leaving in the service, at the close of 1864, forty-two thousand one hundred and sixty-three men. To this number should be added three regiments of one hundred days' men, furnished during the year. Two drafts for men were made in the State. In 1863 the enrolment was 121,202 and the number drafted was 14,985. Of this number 880 were held to service in person or by substitute; 2,689 failed to report; 6,285 were exempt, and 5,081 paid commutation, amounting to \$1,524,800. In November, 1864, under the corrected enrolment, the number subject to draft was 96,068. Of these there were drafted 17,534, of whom 8,439 were held to service in person or by substitute; 6,724 were discharged after draft, and 7,367 failed to report. Great contributions were made by the women in almost every town and village of the State to the welfare of the soldiers, and generally through aid societies.

The amount of the State debt is two million five hundred thousand dollars. With the exception of one hundred thousand dollars, this debt was created for war purposes, and is a legitimate charge against the Federal Government. The balance in the Treasury at the close of 1864 was \$107,620. The disbursements during the year from the War Fund for the families of volunteers, were \$615,698. The taxable property in the State was estimated in 1863 at \$158,000,000, exclusive of \$80,000,000 railroad property. The State tax is about five and one-half mills on each dollar of the taxable property. Of the total revenue—\$802,196—paid into the Treasury during the year, the tax on banks produced \$52,016, and the tax on railroads, \$128,008. During the year there was paid \$42,500.00 for the Hospital for the Insane; \$41,371.55 for the State Prison; \$16,175.00 for the Deaf and Dumb Institute; \$19,250.00 for the Institute for the Blind; \$12,004.50 for the State Reform School. The whole amount of the productive school fund is \$2,052,858; and of the income, \$151,010 were appropriated to public schools. The amount of the productive

fund of the State University is \$157,170. The National Bank Law produced serious results upon the banks of the State. Their circulation at the end of the year was about \$2,500,000. This was secured by deposits with the Comptroller of stock amounting to \$2,700,000. About one-half of these securities consisted of Wisconsin war bonds. The circulation of eighteen or twenty banks was secured entirely by these bonds. It was necessary to throw these on the market to substitute the national bonds for them.

At the election for President the total vote of the State was 149,342: of which Mr. Lincoln received 88,458; Gen. McClellan 65,884. Majority for Mr. Lincoln 17,574. The Legislature was divided as follows:

	Senate.	House.
Republicans	25	67
Democrats	8	38
	33	105

In some parts of the State the popular vote was less than in 1860. This diminution was ascribed to the war.

Jason Downer was appointed a judge of the Supreme Court of the State to fill a vacancy occasioned by the resignation of Byron Paine.

One of the oldest men in the world is a resident of Wisconsin, having reached the age of one hundred and thirty-nine years. He is thus described in the "State Journal":

Joseph Crele was born in Detroit, of French parents. The record of his baptism in the Catholic Church of that city shows that he is now one hundred and thirty-nine years of age. He has been a resident of Wisconsin for about a century. He was first married in New Orleans one hundred and nine years ago. Some years after he settled at Prairie du Chien, while Wisconsin was yet a province of France. Before the revolutionary war, he was employed to carry letters between Prairie du Chien and Green Bay. It is but a few years ago that he was called as a witness in the Circuit Court, in a case involving the title to certain real estate at Prairie du Chien, to give testimony in relation to events that transpired eighty years before. He now resides with a daughter, by his third wife, who is over seventy years of age.

The residence of the family is only four or five miles out of Portage City. From citizens of that place we learn that the old man is still active, is able to chop wood, and to walk several miles. He speaks English quite imperfectly, but converses fluently in the French language. He goes to elections, and, like a sensible old gentleman, votes the Union ticket. Stoops a little under the burden of years, but not more than many men of seventy. In person he is rather above the medium height, spare in flesh, but showing evidences of having been in his prime a man of sinewy strength. Concerning his habits, a subject of much interest in connection with an instance of such extraordinary longevity, we have been able to learn but a little, except that he is an inveterate smoker.

A very good daguerreotype picture of him, taken in 1856, may be seen at the rooms of the State Historical Society.

Three score years and ten ordinarily constitute the full span of a vigorous human life. This man's existence has been prolonged for almost twice that period. Those who began the journey of life with him are dead and their very bones are dust. Babies that he might have dandled on his knee at an age when most men are bowed with decrepitude, have grown into manhood, passed through the ordinary vicissitudes

tudes of life, become gray and feeble and sunk into old men's graves, and this man still lives! He walks about among a generation whose grandsires were unborn after he had passed the usual period of manly pride. All his contemporaries are gone. No wonder if at times, as we understand is the case, a haunting sense of loneliness overwhelms him. Though he has led a rude border life, and probably has little of sentiment in his composition, yet, in some dim way at least, he experiences the feeling, so touchingly expressed by Wordsworth, writing under the shadow of more than seventy years, of

"One to whom Heaven assigns that mournful part,
That utmost solitude of age to face."

And with his simple and unsophisticated conceptions respecting a Deity, this feeling of solitariness; of remaining thus long the sole survivor of a generation; of walking about in this latter half of the nineteenth century, and in these days of telegraphic despatches, monitors, steam presses, and religion—he was a man capable of bearing arms in the days of Braddock's defeat!—the sense, we repeat, of this exceptional and anomalous lot, joined with his crude and untutored notions upon religious subjects, has induced in his mind the curious fancy that perhaps God has overlooked him.

WÜRTEMBERG, WILHELM FRIEDRICH KARL, king of, born in Silesia, September 27, 1781, died at the Castle of Rosenstein, June 25, 1864. He was the son of Duke Friedrich of Würtemberg (afterwards the first king), and was educated principally at St. Petersburg and Geneva. In 1797 his father became the reigning duke, and the young prince, disliking his subserviency

to France, entered the Austrian service, and remained in it until 1806, when a positive command from his imperious parent compelled him to leave it and to marry the Princess Carolina Augusta of Bavaria. The union, however, was merely nominal, having been forcibly imposed upon both parties; and some years later, upon a reconciliation between the king and his son, it was dissolved by mutual consent. In 1812 the Prince accompanied Napoleon in his invasion of Russia as commander of the Würtemberg contingent, and greatly distinguished himself by his vigor and success. In 1815 he drove a French corps under Rapp behind the walls of Strasbourg. In 1816 he married the grand duchess Katarina Pavlovna of Russia, who died in 1819, leaving him two daughters, one of whom is the present queen of the Netherlands. He subsequently married his cousin Pauline, daughter of Duke Ludwig of Würtemberg. Prince Wilhelm ascended the throne on the sudden death of his father in 1816, and at once granted a Constitution to his people, which is still in force. In 1848 he opposed, like all the German princes, the Federal Constitution. More recently his Government gained some popularity by its attitude in the question of a reconstruction of Germany, and in the Schleswig-Holstein question. He is succeeded by his son, Karl Friedrich Alexander.

BAVARIA, KING OF.—Birth, 162; education, 162; reign, 162; death, 162.

BAYARD, JAMES A.—Senator from Delaware, 219; on the oath of a Senator, 224; takes the oath required by the Senate, 223; remarks, 223; resigns his seat as Senator, 223.

Belgium.—Its king, 162; government, 162; provinces, 162; cities, 162; commerce, 162; religions, 162; education, 162; internal condition, 162; parties in the new Chamber of Deputies, 162.

BENJAMIN, PARK.—Birth, 167; education, 167; writings, 167; death, 167.

BINGHAM, PERCIVAL.—Birth, 167; pursuits, 167; death, 167.

BIRNEY, DANIEL BELL.—Birth, 167; military career, 167; death, 162.

BLANCHARD, THOMAS.—Birth, 162; inventions, 162; death, 162.

BOUTWELL, GEORGE S.—Member of Congress from Massachusetts, 219; on repealing the enrolment commutation, 266; on the issue of the emancipation proclamation, 267; on the admission of a Representative from Arkansas, 310; on the freedom of slaves in the army, 327.

Brasil.—Area, 168; population, 168; commerce, 168; debt, 168; army, 168; Parliament, 168; difficulties with Great Britain, 169; do. with Uruguay, 169; affair of the Florida, 169; Protestant emigrants, 169.

Brine, utilization of.—Nutritive ingredients extracted from meat, 170; process of recovering them, 170; magnitude of the waste, 171.

BROOKS, JAMES.—Member of Congress from New York, 219; on the reference of the President's message, 220.

BROOMALL, JOHN M.—Member of Congress from Pennsylvania, 219; on confiscation, 268.

BROWN, B. G.—Senator from Missouri, 219; on procuring substitutes with commutation money, 326.

BROWN, SIR WILLIAM.—Birth, 171; education, 171; commercial pursuits, 171; death, 171.

BULLIONS, PETER.—Birth, 171; education, 171; pursuits, 171; writings, 172; death, 172.

C

Calculating Machine.—Its invention, 172; method of operation, 172; uses, 172.

California.—Area, 173; government, 173; legislature, 173; elections, 173; finances, 173; receipts of treasure at San Francisco, 173; agricultural progress, 173; assessable property, 173.

CAMPBELL, JOHN N.—Birth, 173; pursuits, 173; death, 174.

Canada.—Officers of the Government, 174; the coalition, administration, 174; formation of a new ministry, 174; the following session of Parliament, 174; Mr. George Brown, 174; failure of the Government to strengthen itself, 175; a crisis, 175; new cabinet, 175; failure, 175; dead lock, 175; new cabinet, 176; federation proposed, 176; conference of the Provinces, 176; result, 176; manner in which it was received by the Home Government, 176; letter of Mr. Cardwell, 176; financial position of the Provinces, 177; position of the Confederation, 177; future position of the Provinces, 178; imports and exports, 178; difficulties with the United States, 178; raid into Vermont, 178; decision of the court, 178; volunteer force called out, 178; reciprocity treaty, 191.

CARLILE, GEORGE W. F. H.—Birth, 179; public services, 179; death, 179.

CARLILE, JOHN S.—Senator from Virginia, 219; on the emancipation of the wife and children of colored soldiers, 271; on confiscation, 287; on the relations of the insurrectionary States, 301-306.

CHASE, ISAAC.—Birth, 179; pursuits, 179; death, 179.

Chili.—Officers of the Government, 180; population, 180; debt, 180; army, 180; commerce, 180; interest in the difficulties of Peru, 180; German colonists, 180; minerals in the Andes, 180; pass through the Andes, 181.

China.—Emperor, 181; population, 181; state council, 181; commerce, 181; railways, 181; cotton trade, 181; Protestant missionaries, 182; rebels, 182; battles, 182; Major Gordon, 182; decree of the emperor, 182; capture of Nanking, 182; Taepings demoralized, 182.

CLARK, DANIEL.—Senator from New Hampshire, 219; on amending the Constitution, 260; on the relations of the insurrectionary States, 304; on repealing the commutation clause of the enrolment act, 319; on procuring substitutes with commutation money, 326.

CLAY, BRUTUS J.—Member of Congress from Kentucky, 219; on the freedom of slaves in the army, 327.

COLFAX, SCHUYLER.—Member of Congress from Indiana,

219; chosen Speaker, 319; moves to expel Alexander Long, 344; remarks, 344.

COLLAMER, JACOB.—Senator from Vermont, 219; on the oath required of a Senator, 226; on the exclusion of witnesses on account of color, 225; on prohibiting the coastwise slave trade, 248; on amending the Constitution, 261; on bounty to volunteers and pay to soldiers, 318; on repealing the commutation clause of the enrolment act, 319-322.

Commerce.—Results for 1863 and 1864, 184; comparative prices of sixteen articles, 184; average rise, 184; revenue at New York, 184; effect of duties on the cost of goods, 185; imports at New York, 185; failures, 185; quantities and values of the principal foreign imports, 185; exports from New York, 187; do. of leading articles of domestic produce, 187; exports of petroleum, 188; wholesale prices of foreign and domestic produce of New York, 188; exports of breadstuffs to Great Britain, 189; ships transferred to the English flag, 189; quantities of wheat imported into Great Britain, 189; dealing in gold, 189.

Commercial Intercourse.—Modifications in the intercourse with the Southern States, 189; orders of the Treasury Department, 190; opening the port of Brownsville, 190; other ports, 190; trade at Memphis, 190; vast trade on the Mississippi, 190; benefit to the inhabitants, 191; new regulations, 191; statement of Gen. Canby, 191.

Reciprocity treaty with Canada, 191; steps to annul it, 191; its provisions, 191; arguments in favor of the treaty, 192.

Confederate States.—Discouragement of the people, 198; agriculture prosperous apart from the invasions, 198; manufactures, 198; extent of commerce, 198; relations with foreign States, 198; new Secretary of the Treasury, 194; operations of the treasury, 194; expenditures, 194; funded debt, 194; unfunded debt, 194; foreign debt, 194; act to increase the resources of the Government, 194; condition of the currency, 195; deficiency of railroad transportation, 195; severe test to sustain military operations, 196; meeting of Governors of States, 196; resolutions, 196; desertions from the armies, 196; speech of Jefferson Davis at Augusta, 196; speech of Mr. Stephens, 197; question of peace, 197; correspondence between Gov. Vance and Jefferson Davis, 198; views of A. H. Stephens on peace and the Chicago Convention, 199; speech of Herschell V. Johnson of Georgia, 199; letter of Mr. Boyce of South Carolina, 200; resolutions before the Georgia Legislature, 200; letter of Jefferson Davis on a National Peace Convention, 201; proposition of Gen. Sherman to Gov. Brown, 209; the use of slaves as soldiers, 202; its progress, 202; further progress, 202; condition of the people after nearly four years of war, 206; sales of real estate for taxes, 208.

Confiscation.—Letter of the Attorney-General to the District Attorneys, 203; conflicting decisions, 204; decision of the District Court of Indiana, 204; action in reference to the declaration of forfeiture, 204; debate on, 275.

Congregationalists.—Numbers, 204; national organization, 204; meeting called, 205; the answer to it, 205; a council to convene, 205; subjects for its deliberations, 205; churches in Europe, 205; clergy, 205; independent churches in France, 205.

Congress, Confederate.—Session in November, 1863, 206; state of the country considered, 206; greatest needs to strengthen the army and improve the currency, 206; shall the Confederacy stand or fall? 206; every able-bodied man should be declared in the military service, 206; repeal all laws granting exemptions, 206; why are the streets of Richmond crowded with young men? 206; the presence of foreigners, 207; will Congress arouse

draft

from its lethargy? 207; stop tinkering with the currency, 207; debt growing frightful, 207; make treasury notes a legal tender, 207.

Bill to abolish exemptions considered, 207; 400,000 men on the rolls, but how many in the army? 207; unable to feed those in the field, 207; manufactures as necessary as agriculture, 208; must have more men in the field, 208; the cry of scarcity a stratagem, 208; the State of Virginia cannot stand another draft, 208; our policy to protract the war, 208; weak point of the enemy is his finances, 208; most certain way to feed the army is to increase the numbers in the field, 209; bill passed, 209.

In the House, the employment of free negroes and slaves under certain circumstances, considered, 209; bring 40,000 men into the field without diminishing our resources, 209; unjust discrimination against the poorer white classes, 209; unconstitutional, 209; further debate, 210; bill passed, 210.

Joint resolutions of both Houses of Congress, 210; manifesto of Congress relative to the existing war, 210.

Session of Congress in May, 211; list of members, 211; explanation in the House relative to public sentiment in North Carolina, 211; further explanation, 212; act to suspend the privilege of *habeas corpus*, 212; its effect, 212; preamble and resolutions relative to peace submitted, 212; discussion, 212; substitute for the resolutions offered, 214; substitute to the substitute offered, 214; the Government should propose terms of peace, 215; would they be received by the United States? 215; it was intimated they would be received, 215; resolutions offered relative to prosecuting the war to independence, 215.

The employment of slaves in the army, 216; not needed, 216; are we approximating exhaustion? 216; the appeal to African troops to save us, 216; how is it proposed to fight negro troops, 217; will the negro fight well enough to resist the Yankee? 217; the employment of negroes a confession of weakness, 217; bill to arm the slaves, 217; passage in the House, 217; lost in the Senate, 217; action of the Virginia Legislature, 217; bill reconsidered in the Senate, 217; amended, 218; vote on its passage, 218; we thought we had got rid forever of the slavery agitation, 218; a confession of despair and an abandonment of the ground of secession, 218; if we are right in passing this measure we were wrong in denying to the old Government the right to interfere, 218; necessity of freeing the negroes if they were made soldiers, 218; no considerable body could be raised in the States without stripping the country of the labor necessary to produce food, 218; as to its expediency it is worse than a question of principle, 218.

Congress, United States.—List of members, 219; objections to the members from West Virginia, 219; choice of Speaker in the House, 219; moved in the House to refer to a special committee the portion of the message relating to the rebellious States, 220; reasons for the reference, 220; inquire if republican government has not been overturned north of the Potomac, 220; there are no rebel States, 220; States in which rebels have taken possession, 221; motion adopted, 221.

Resolution of thanks to Gen. Grant, 221; resolution relative to the suspension of certain newspapers, 221; do. relative to forgery of public documents, 221; do. relative to suspending the writ of *habeas corpus*, 222; do. relative to the trial of Vallandigham, 222; do. relative to persons arrested, 222; bill relative to bail for persons arrested, 222.

In the Senate, resolution relative to Senators taking an oath prescribed by Congress, considered, 222; a Senator not a civil officer decided by Congress, 222; the Senate

has decided this law to be constitutional by its passage, 222; reason for presenting the subject, 222; what is the true meaning of the act of Congress? 222; what objection to refer to a committee? 224; who is not ready at this moment to vote on the question? 224; no more grave matter can come before the Senate, 224; reference lost, 224; question postponed, 224; again considered, 224; the adoption or rejection of the resolution involves two general questions, 224; is the action repugnant to the Constitution, and is a member of the Senate included in the provisions of the act? 224; the form of oath originally adopted prescribed by the Constitution, 225; this act in conflict with the fifth article of the amendment to the Constitution, 225; every one required to take this oath held to answer for a capital crime, 225; the act repugnant to the second section of the second article of the Constitution, 225; of the nature of an *ex post facto* law, 226; is a Senator a civil officer? 226; case of Wm. Blount, 226; definition of loyalty, 226.

What trouble was intended in some manner to be corrected by these laws? 226; how can the country be secured against its repetition? 226; how are such men to be kept out? 227; the former oath furnished no security, 227.

Whoever comes here duly elected and with the qualifications prescribed by the Constitution is entitled to his seat, 227; this act is for the most part retrospective, 227; could the Senator who introduces this act have taken an oath, which the majority of the Senate might have prescribed when he first entered it? 228; to deny a man having the Constitutional qualifications a seat is to break the Federal compact? 228; does the act in question embrace the case of a Senator? 228; is a Senator a civil officer? 229; is it in the power of the Senate by a rule to require an additional oath? 229; what is the oath required by the Constitution? 229.

The simple question is, Will the Senate obey an existing statute? 229; is a Senator an officer—what says the dictionary? 229; what say the Constitutions of various States? 229; Massachusetts, Vermont, New Hampshire, New Jersey, Pennsylvania, New York, 229; the Blue Book, 229; the case of Mr. Blount has no application, 229; the oath has been prescribed by Congress, 229.

Does the act embrace a Senator? 228; resolution adopted, 228; yeas and nays, 228; Mr. Bayard of Delaware takes the oath, 228; his reasons for this action, 228, 229.

In the Senate, a bill to repeal the act prohibiting colored persons to carry the mail considered, 228; amendment proposed to admit them as witnesses, 228; not legal in many States, 228; rules of evidence in a State govern United States Courts, 228; origin of the legislation proposed to be stricken from the statute book, 228; letter of Gideon Granger in 1802, 228; the legislation a part of that system which Congress has so long imposed upon the country, under the domineering influence of slavery, 228; passage of the bill suspended, 228; the amendment added to an appropriation bill, 228; passed, 228; yeas and nays in the Senate, 228; do. in the House, 228.

In the Senate, a bill to provide a temporary Government for Montana territory considered, 227; moved to strike out the words "white male inhabitant," and to insert "male citizen of the United States," &c., 227; if, as is contended by those who now administer the Government, a negro is a citizen, the amendment makes him a voter in the territory, 227; better amend by saying "all black men," 227; nature of the Dred Scott decision, 227; Congress as good an authority in its interpretation as the Supreme Court, 227; many men think that decision was

any thing but an outrage, 237; facts of the case, 237; God forbid that Congress should consent to wear the straight-jacket of the Dred Scott decision, 238; the decision was an outrage upon the civilization of the age, a libel on the law, but not a disgrace to the Supreme Court, 238; bill passed, 238; yeas and nays, 238; House refuse to concur, 238; endeavor by one branch of Congress to establish negro political equality, 238; Conference Committee report to the House, 238; report rejected and further conference asked, with instructions to Committee to agree to no such proposition, 238; Senate decline to agree to a Committee in the manner asked, 239; motion that the Senate insist on the amendment and agree to a conference, 239; not a negro in the territory, 239; one of the most practical questions ever presented to the American people, 239; the amendment will have no practical effect, 239; motion adopted, 239; Conference Committee report in the Senate, 239; free white persons to be authorized to vote, 239; hope the Senate will adhere to its original position, 240; why detain the Senate fixing a principle that can have no application? 240; the principle is much more important than the bill, 240; report of the Committee agreed to, 240; yeas and nays, 240; report adopted in the House, 241.

In the Senate, a bill to amend the charter of the city of Washington considered, 241; moved to insert the word "white" before "male" relative to voters, 241; another amendment moved that those who have paid a tax and can read and write be electors, 241; would admit negroes to the right of suffrage, 241; is it national to make color a test? 241; the principle is objectionable; strike the chord here and it will vibrate to the limits of the republic, 241; opposed to granting the right of suffrage at once, 242; new issues, 242; consequences, 242; bill suspended, but joint resolution subsequently passed, 242; yeas and nays, 242.

In the Senate, a resolution prohibiting the exclusion of colored persons from enjoying railroad facilities in the District, considered, 242; a recent outrage, 242; the outrage would be the other way, 242; resolution agreed to, 242; yeas and nays, 242.

In the Senate, a bill to incorporate the Metropolitan Railroad Company considered, 242; amendment against excluding colored persons from cars, 242; one-half the business of the session devoted to debating the rights of the two races, 242; impossible to achieve social and political equality, 242; proposal to send contrabands to Massachusetts, how received, 244; those just escaped from slavery not the people to exercise the elective franchise, 244; no necessity for the amendment, 244; the question as plain as one of the ten commandments, 244; carried, 245; yeas and nays, 245; do. in the House, 245; bill to charter Georgetown Road, considered, 245; amendment moved and passed, 245; failed in the House, 245.

In the Senate, motion to amend the appropriation bill, by providing a prohibition to the coastwise slave trade, 245; what is the result of the motion? 245; our statute book should not be defiled by any such license, 246; why contest this matter? It will be carried finally, 247; the North is now divided and the South a unit, why? 247; opinion of the Supreme Court in the case of Groves vs. Slougher, 248; opinion of Judge McLean, 248; this subject within the power of the States, 248; Brightley's Digest, 249; amendment agreed to, 249.

In the Senate, a bill to repeal the Fugitive Slave Law considered, 249; ought we to repeal the law of 1793, made by the framers of the Constitution? 249; better make a clean thing of it, 249; we should give to the few Southern people left, who have the right to enforce the Constitution against us, their constitutional rights,

249; carrying the matter too far to repeal the act of 1793 now, 250; the case of Prigg vs. the State of Pennsylvania, 250; constitutionality of the act maintained, 250; the limited effect of inference, 251; does the term "held to service" embrace slaves? 251; the question is whether the clause is applicable to slaves, 251; what is the meaning of the words "three-fifths of all other persons"? 252; what is the object of the ninth section of the first article of the Constitution? 252; the Constitution recognizes the institution in plain terms, 252; a rule of interpretation, 253; words "held to service" do not include slaves, 253; slavery cannot be sanctioned or legalized except by positive words, 254; argument of Granville Sharp, 254; amendment agreed to, 254.

In the House, a bill to repeal the Fugitive Slave Law considered, 254; opinions of the framers of the Constitution, 255; words of Washington, 255; declarations of Hamilton, 255; of Fisher Ames, 256; of Judge Iredell, 256; the Prigg case, 256; case of Wright vs. Deacon, 256; bill passed, 257; passed also in the Senate, 257.

In the Senate, a joint resolution to amend the Constitution considered, 257; the resolution, 257; slavery the cause of our troubles, 257; something more efficient must be done to get rid of slavery, 258; this is the crowning act of a series of measures, 258; if the Senate were to adopt this resolution, and it be ratified by three-fourths of the States, it would not be binding on any State whose interest was affected by it if that State protested against it, 259; the Constitution a contract, 259; could this Constitution have been adopted if such an amendment had been contemplated at the time? 259; if you can regulate the relation of master and slave in the States, you can regulate that of parent and child, 259; provision of the Constitution for amendment, 260; this is a day that I and many others have long wished for, 260; the nation to commence a new life, 260; if we cannot put away this great sin our cause is hopeless, 261; our home policy, our finances, our legitimate business have all been ignored this session, to discuss the *status* of the negroes of the Southern Confederacy, 261; in what condition are the Southern States to consider amendments to the Constitution? 261; whose fault is it? 261; positive provisions by which slavery is brought under the control of Congress, 262; to provide for the common defence, &c., 262; to raise and support armies, 262; guarantee of a republican Government to every State, 262; such the protection thrown by the Constitution over every person without distinction of color, 263; how, then, comes any person to be held as a slave? 263; nothing in the Constitution on which slavery can rest or find the least support, 263; do you think the Southern people will yield if you adopt this amendment? 264; amend the Constitution so as to lay your hand on the property interest of New England, she would be in revolution to-morrow, 264; if the men who are to pass this amendment were interested in the property, there is not one of them but would oppose it, 264; the power of amendment as now proposed to be exercised, would invest the amending power with a faculty of destroying and revolutionizing the whole Government, 264; resolution passed, 265; what number of Senators is required to pass this amendment? 265.

In the House, the resolution considered, 265; can three-fourths of the States change the condition of the other States? 265; this is a wide departure from its spirit, 265; many objections to this amendment, 265; further debate, 265; resolution passed, 266.

In the House, a bill to aid the President in executing the emancipation proclamation, offered and referred, 266.

In the House, a proposition to repeal the commuta-

tion clause of the enrolment act considered, 266; the emancipation proclamation was issued independent of the meeting of State Governors at Altoona, 268; when was the issuing of the proclamation determined on? 267; what was the contingency on the happening of which the proclamation was issued? 267; *note*, letter of Owen Lovejoy on the time of issuing the emancipation proclamation, 267.

In the Senate, the bill to promote enlistments considered, 267; moved to strike out the section giving freedom to the mother, wife and children of negro soldiers, 267; the section clearly unconstitutional, 268; no power in Congress to pass such a law, 268; the present law, 268; if Congress has the power by the mere fact of a slave serving for an hour, or two hours, or a day, to emancipate all his relatives, has it not also the power to-day to pass a law emancipating the slaves of Kentucky and Missouri, upon the ground that slavery stands in the way of peace? 269; a question of the emancipation of the whole negro race of the country, 269; can we emancipate them either as a punishment of rebels, or a reward for military services? 269; the existence of an insurrection will not justify interference with slavery, 269; every department of the Government has settled the character of the present struggle, 269; we are obliged to wage the war according to the laws of war, 270; the Constitution furnishes no guide for treating public enemies, 270; you must treat them as enemies, 270; what are our rights over them under the laws of war? 270; the record of history on the arming and emancipation of slaves, 270; is there any thing in the Constitution that forbids us from employing free negroes or slaves? 271; on the subject of emancipation ready now to go as far as any one, 271; positions assumed, 271; authority of J. Q. Adams, 271; to the Constitution and not to the laws of war we must look for all power which we can rightfully exercise, 271; such assumptions give to the rebellion a position it never could have attained, 272; the whole scope and plan of the powers of the Government is to operate upon individuals and not States, 273; what are the war powers of the General Government? 273; they are contained in the Constitution, 273; the principle established by the foundation of this Government was, that a union of States having different interests and local institutions, could be formed for purposes of common defence, 273; exert this power which is proposed to be exercised, and you declare that after seventy years of trial, the principle has proven to be a failure, 273; we have never as a Congress recognized the Confederate States as a belligerent power, 273; Congress has no power in time of war that it has not in time of peace, 273; why has this civil war been permitted to linger so long? 273; other amendments offered, 274; the General Government has no higher right to interfere with property in slaves than it has in lands or horses, or any other subject of property, 274; it will not do to say there can be no property in slaves—there ought to be no compensation for them, 275; suspension of the bill, 275.

In the House, a resolution to amend the joint resolution explanatory of the act to suppress insurrection, &c., considered, 275; the proposition is to substitute for the language of the resolution of 1863, the language of the Constitution, 275; it leaves the whole matter of forfeiture in fee or confiscation for life to the courts, 275; meaning of the action of the President and Congress in 1863, 275, 276; expediency of the measure, 276; the whole question of our power to punish treason rests upon the construction given to the limitation in the clause of the Constitution, 276; words of the Constitution, 276; what is a fair import of the words? 277; substitute the word

"unless" for "except," 277; punishment in England, 277; it is said the science of philology is progressive, 278; the phraseology of the Constitution must carefully guarded, 278; the word "unless" does not change the meaning at all, 278; the forfeiture must be effected during life, 278; the Constitution deals merely with corruption of blood and its operation, 279; the law of the last Congress, 279; what does the Constitution provide? 279; the Constitution has no reference to any one of the provisions of the bill, 279; the law states how you are to seize and condemn the property, 280; essential to ascertain what relation the seceded States bear to the United States, 280; a question of vast importance, 280; what is the relation of the Confederate people? 280; Vattel, 280; the contest has the character of civil war, 281; what the effect of this public war between these foreign nations, 281; Vattel, Phillimore, Kent, Lieber, the Supreme Court, 281; said to be a contest with individuals, 281; you cannot punish them as traitors, 281; there can be no neutrals in a hostile State, 282; the idea that the loyal citizens though few are the State cannot be comprehended, 283; if the United States succeed, how shall we treat the vanquished belligerent? 283; two positions taken by very opposite parties upon the status of those engaged in the rebellion, 283; the laws of nations recognize the right of conquest between the parties to a public war, but do not authorize the seizure and confiscation of private property or land only in excepted cases, 284; the doctrine of all writers, 284; Chief Justice Marshall, 284; Secretary Marcy, 284; J. Q. Adams' opinion, 285; Hoffman's opinion, 285; it is said we may make a conquest of the eleven States, 285; the law of nations recognize in the conqueror an unlimited sovereignty, 286; where is the sovereignty of this country? 286; the war powers are vested in Congress, 286; these States are in the Union, and no power short of a successful revolution can drive them out, 287; what is the real issue before the country? 287; amendment passed, 287; yeas and nays, 287; Senate Committee recommended that it do not pass, 287.

In the Senate, a bill to establish a Freedman's Bureau considered, 287; amendment to repeal the joint resolution relative to confiscation offered, 287; proposed to leave confiscation where the Constitution has left it, 288; it is as constitutional to take the rebel's property as his life, 288; who framed the provisions of the Constitution? 288; men who occupied the position of rebels against English authority, 288; where do you get authority to confiscate property unless from the Constitution? 288; obligations of all to obey the Constitution, 289; no Senator has a right under the Constitution to shoot down a rebel, 289; the true question is whether, by any law we can make, the estates of traitors can be forfeited absolutely and in fee, 289; Congress cannot enact laws of war; to attempt it would be an absurdity, 289; the President and Senate entrusted with power of agreeing to alterations in the law of nations, 290; in deciding cases under the law of nations, an act of Congress would have no binding force in the Courts, 290; can we make prize of war of the real and personal estates of those engaged in this rebellion? 290; can we be serious in expecting any good results from such measures? 290; just what Jefferson Davis would have prayed for, 291; is it not time to pause and inquire of the results of this policy? 291; these things are enough to drive a sane man mad, 291; everybody knows the South is more divided to-day than it was three years ago, 292; how is it with the North? 292; what may the sovereign power of the United States do, and what has it delegated to the courts to declare? 292; further debate, 296; amendment

agreed to, 296; bill postponed to the next session in the House, 298.

In the House, a bill to guarantee to certain States a republican form of government considered, 298; the bill, 298; it challenges the support of all who consider slavery the cause of the rebellion, 294; what is the nature of this case with which we have to deal? 294; engaged in suppressing a military usurpation of the authority of the State Government, 295; what jurisdiction does the duty of guaranteeing a republican Government confer, under such circumstances, upon Congress? 295; until Congress recognize a State Government organized under its auspices, there is no Government in the rebel States, except the authority of Congress, 295; it has been said peace could be had on any reasonable terms, 295; after the military power is suppressed, call upon the people to reorganize in their own way, subject to the conditions we think essential to permanent peace, 296; three modes indicated, 296; prohibit slavery by the Constitution, 296; plan of the President, 296; proposition of the present bill, 297; extraordinary theories evoked on the relations of the States to the Federal Government, 297; these acts of secession are either valid or invalid, 297; they cannot be invalid to destroy the Union, and valid to destroy the State Governments, 297; if these States are out of the Union, their Governments are in force until changed, 298; the foundation corner of the Confederation, 298; bill passed, 298; yeas and nays, 298.

In the Senate, the bill considered, 299; amendment offered, 299; what do you propose to do with these seceded States with regard to their coming back? 299; the amendment declares they shall not come in until Congress provides some principle for their admission, 299; what relation do these seceded States now hold, 300; duty to guarantee a republican form of government, 300; it is said the States may lose their organization rights and corporate capacity by rebellion, 300; features of this bill, 300; there was a time when a precedent like this would have been deemed unconstitutional, 301; the amendment accomplishes nothing, 301; this bill accomplishes the work which the traitor began, 301; what authority has Congress to exercise this power? 302; excitement produced by the proposition to restrict territorial self-government, 303; no State has a republican form of government when that government is prescribed to them by another outside their limits, 303; where does Congress derive the power to govern a State by a Federal appointee? 303; what does the word guarantee mean? 303; does it authorize this Union to set up a government, to create a government, or to make a form of government? 303; views of the Federalist, 306; if the State government is overthrown, is it not the duty of the Federal Government to restore? 304; what does this bill propose? 304; Washington ever maintained the supremacy of the civil power, 304; where do we derive the power to reconstruct this Union? 305; the existence of the institution of slavery in a State, or any other domestic institution, does not make the Government republican or anti-republican in form, 306; this bill is not claimed to be a war measure, 306; the Government of the United States emanated from the States, 306; it is a declaration to those States that they are never to be received into the Union, 306; amendment adopted, 306; amendment to adopt the emancipation proclamation offered, 306; lost, 306; bill passed, 306; House non-concurs in the amendment, and the Senate recedes, 307; proclamation of President Lincoln, 307; protest of Messrs. Wade and Davis, 307.

In the House, a motion to admit a representative from Arkansas, 307; facts of the case, 307; a question of the

recognition or refusal to recognize the organization of a State Government in Arkansas, 308; is the State Government in Arkansas destroyed? 309; a State without a Government, 310; Arkansas now under a military Governor, 310; is Arkansas in or out of the Union? 310; credentials referred, 311.

In the Senate, a motion to admit Senators from Arkansas, 311; the decision of this question rules all the questions of representation in Congress, and the participation of Arkansas in the Presidential election, 311; five distinct reasons against the recognition of representation from Arkansas, 311; the representation is founded on a minority, 311; absurd for each chamber to determine the question of representation for itself, 312; authority is in harmony with reason, 312; the Constitution seems to place the question beyond doubt, 312; the President's proclamation implies the action of Congress, 312; war power of the President, 313; in the Missouri case it was conceded that it was not in the power of Congress to annex any such condition to the admission of a State, because it would produce inequality as between States, 313; the war is carried on against the citizens individually of the States, 314; the State of Arkansas is in insurrection, 314; postponed, 314.

In the House, a joint resolution relative to Mexico, 314.

In the House, resolutions relative to the Enrolment Act offered, 315; votes, 315.

In the Senate, a bill to increase the bounty to volunteers, and the pay of the army, considered, 315; the assumption by the authorities of the power to give bounties without law, 316; the conscription act not a failure, 316; object to legalize the act of the Government, 316; if the draft is not a failure, it is not a success, 317; every appeal to the people a success, 317; the continued offer of bounties has had a tendency to diminish the patriotism of the people, 317; the failure of the draft has been owing to the clumsy manner in which it was attempted, 317; every citizen owes to the Government the utmost of his ability, 318; the burdens in this war consist in two things, 318; the conscription act has done more to raise the sentiment of this nation than any act passed, 318; the enrolment act considered, 319; amendments proposed, 319; the commutation should be according to the income of a person, 319; object to fix a limit to the price of substitutes, 319; infirmities allowed, 320; how the law was executed, 320; what is our present legislation on the subject? 320; the people now understand the law, 321; a new income tax proposed, 321; other amendments proposed, 321, 323; what is the number of colored troops? 323; fifty thousand enlisted, 323; States in which colored troops are raised, 323, 324; what law is there to justify the Government in paying any thing to masters for their slaves? 324; a master is to be paid for his property, 324; raising colored troops in Maryland, 325; do. in Kentucky and Tennessee, 325; further amendments, 325; necessity and propriety of calling colored men into the service, 326.

In the House, the enrolment act considered, 327; amendments, 327; it was said the laws and constitutions of the border States were to be respected, 327; no constitution or law of any State shall stand between me and what I believe my duty, 327; how is just compensation for this private property to be ascertained? 327; the question relates to the expediency of taking slaves for military service, 328; what right have you to insist that our slaves in Kentucky shall be placed on your enrolment list? 328; votes on the amendments, 329; effect of the amendments to the act, 329.

In the Senate, a bill to abolish commutation consid-

ered, 880; letter from the Secretary of War, 880; bill passed both Houses, 880.

In the House, resolutions on the object and conduct of the war offered and voted on, 880, 881, 882, 883, 884; how stands the Union to-day? 884; a brief period of three short years has produced a fearful change in this free, happy, and prosperous Government, 885; the real friends of the Confederates are in control of this Government, 885; the amnesty proclamation absurd, 886; war is final, eternal separation, 886; the views formerly entertained of the coercion of States, 886; the Confederate States are out of the Union, occupying the position of an independent power, 887; they have been treated as belligerents, 887; the time for the restoration of the Union long since dispelled, 888; remarks of Marshal Ney, 888; how do we stand in the eyes of the civilized world to-day? 889; how much better if we had parted in peace with our dissatisfied sisters! 889; better sacrifice nine-tenths of the territory than to destroy our republican form of government, 889; the lessons of history are full of warning, 840; a common error to suppose that to part with our jurisdiction over eleven States involves the destruction of the Government, 840; the Union is lost, never to be restored, 840; the idea upon which this war is founded—coercion of States—leads to despotism, 841; do not believe any peace is attainable on the basis of Union and reconstruction, 841; reminded of a distinguished character in "Paradise Lost," 843; a Benedict Arnold proposes to surrender, 843; the first time it has been proposed to abandon the war, 843; the right of revolution, 843; where shall the line of division be drawn? 843; secession is the toxin of eternal war, 843; coercion is the basis of every law in the universe, 843; never attempted to override the Constitution, 843; resolution to expel Alexander Long offered, 844; presented as a matter of duty, 844; giving aid and encouragement to the enemy, 844; is this bold avowal to go unrebuked? 845; its effect abroad, 845; not a leading member of the Administration party who is not committed in doctrine, if not in practice, to a separation of the States, 846; is this member to be excluded from the House in contempt of its rules, in contempt of his constitutional rights, and the constitutional rights of his constituents? 846; there is a hope in this House, 846; war never did, and never will bring your Union together in such a manner as to be worth a cent, 846; the Union is dissolved, and a gulf of blood between the sections, 846; I hope you will never subjugate the South, 847; rather than see the Southern people exterminated, I would accept recognition as an alternative, 847; motion to expel Benjamin G. Harris, 848; lost, 848; motion to censure him, 848; carried, 848; this war cannot restore the Union, 848; can there be such a thing as a Conservative Republican? 848; the rebels, by their insurrection and making war, have forfeited all their rights as citizens of this country, 849; a time may come when a question of recognizing the Southern Confederacy will have to be answered, 849; until that time there shall be no compromise, 850; what did Lord Chatham say? 850; a tribute to the power of public opinion, 851; the issue absolute victory or absolute ruin, 851; resolution modified and adopted, 851; acts of this session of Congress, 851; measures adopted by Congress since 1861 relative to slavery, 852.

Connecticut.—Officers of the State, 853; receipts and disbursements, 852; funded debt, 853; school fund, 853; railroad interest, 853; banks, 853; troops contributed, 853; amendment of the Constitution, 853; elective franchise, 854; State election, 854.

COOK, RUSSELL.—Birth, 854; pursuits, 854; death, 854.

COOK, PARSONS.—Birth, 855; pursuits, 855; death, 855.

COWAN, EDGAR.—Senator from Pennsylvania, 219; on colored voters in Washington, 241, 242; on confiscation, 289; on the commutation clause of the enrolment act, 321, 323.

COX, SAMUEL S.—Member of Congress from Ohio, 219; on confiscation, 277; on the expulsion of Alexander Long, 345.

CREEL, JOSEPH.—An old man, 815.

D

DANIELSEN, ULRIK.—Birth, 856; education, 856; military services, 856; death, 856.

DALLAS, GEORGE M.—Birth, 856; education, 856; public career, 857; death, 857.

DAVEY, GARRETT.—Senator from Kentucky, 219; on amending the Constitution, 264; on emancipating the wife and children of colored soldiers, 374.

DAVIS, H. W.—Member of Congress from Maryland, 220; offers a resolution relative to the President's message, 220; on confiscation, 278; on the relations of the insurrectionary States, 293; protest on the proclamation of the President relative to the bill of Congress for reorganizing States, 307; on admitting a representative from Arkansas, 307; resolution relative to Mexico, 314; on the freedom of slaves in the army, 327; on the expulsion of Alexander Long, 349.

DAWES, HENRY L.—Member of Congress from Massachusetts, 219; on the admission of a representative from Arkansas, 307.

DAYTON, WILLIAM L.—Birth, 857; education, 857; public career, 857; death, 857.

Delaware.—Vote at the Presidential election, 357; parties in the Legislature, 357; measures of emancipation urged by the Governor, 357; efforts to enlist negroes, 358; immigration, 358.

DEMBINSKI, HENRY K.—Birth, 858; pursuits, 858; death, 858.

Denmark.—Government, 859; territory, 859; population, 859; religious denominations, 859; large cities, 859; debt, 859; war, 859; commerce, 860.

Diplomatic Correspondence, &c.—Raids from Canada, 360; arrest of the parties, 360; trial and release, 360; order of General Dix, 360; second order, 361; Secretary Seward's order relative to passports, 361; its effects, 361; recapture and seizure of Arguelles, 361; action of the authorities, 361; action of the Spanish Minister, 362; action of the President, 362; charges against Arguelles, 362; effects, 362; review of the case, 363; indictment of Marshal Murray, 363; case of the Georgia, 363; seizure by the Niagara, 364; the Florida, 364; her seizure, 365; action of the Brazilian Government, 365; letter of the Secretary of State, 366.

DIX, Major General.—Order on the release of the St. Albans raiders in Canada, 360; second order, 361; order relative to the elective franchise, 369; do. to provost marshals, 368.

DOOLITTLE, JAMES R.—Senator from Wisconsin, 219; on colored voters in Montana, 229.

DUNCAN, WILLIAM C.—Birth, 866; pursuits, 866; death, 866.

E

EDGERTON, JOSEPH K.—Member of Congress from Indiana, 219; offers a resolution on the conduct of the war, 322.

ELDRIDGE, CHARLES A.—Member of Congress from Wisconsin, 219; offers a resolution relative to arrests, 222; resolutions relative to conscription, 315.

ENFANTIN, BARTHELEMY P.—Birth, 367; socialistic views, 367; pursuits, 367; death, 368.

Enrolment and Draft.—Acts of Congress relative to, 39; proceedings under, 39, 40; principles upon which conducted, 40, 362-549.

EUROPE.—Territorial division, 368; Polish insurrection, 368; Dano-German war, 368; war in Denmark, 369; outbreaks in Venetia and Hungary, 369; movement in favor of reforms, 369; Danubian principalities, 369; letter of the Pope, 370; the nationality question, 370.

F

FAIRBANKS, ERASTUS.—Birth, 370; pursuits, 370; death, 370.

FRESENDER, WILLIAM P.—Senator from Maine, 219; on bounty to volunteers and pay to soldiers, 317; on procuring substitutes with commutation money, 326; appointed Secretary of the Treasury, 301.

Finances of the United States.—Actual receipts of the Government, 371; do. from miscellaneous sources, 371; securities in London, 371; increased receipts from customs, 371; receipts from loans, 373; acts of Congress, 373; expenditures, estimated and actual, 373; amount of receipts from various sources of ordinary revenue, 373; debt of the United States, 373; expenditures for the War Department, 374; do. for the Navy Department, 374; public debt in July, 1864, 374; authority to borrow yet remaining, 374; actual receipts and expenditures for the quarter ending September 30th, 1864, 375; effect of increased duties on imports, 375; amount of internal revenue received from all sources, 375; do. from incomes, 375; do. from licenses, 376; do. from manufactures and productions, 376; do. from slaughtered animals, &c., 376; do. from fermented liquors, 376; do. from cigars, 376; do. from iron, 376; do. from rock and coal oil, 376; do. from distilled spirits, 376; do. from paper manufactures, &c., 376; national banks—their number, capital, circulation, bonds, &c., 376; specie in the old banks, 377; value of gold and banker's sterling at different periods of the year, 377; bullion in the mint and branches, 377; coinage of cents, 377.

FINCK, WILLIAM E.—Member of Congress from Ohio, 219; resolutions on the object of the war, 380.

FLIEDNER, THEODORE.—Birth, 377; charitable pursuits, 377; death, 377.

Florida.—Nearly abandoned by Federal troops, 378; disastrous expedition of General Seymour, 378; posts constantly held, 379; destruction of salt works, 379; raid of General Birney, 378; State Convention, 379; delegates to the Baltimore Convention, 379.

FLUSSER, CHARLES W.—Birth, 379; naval services, 379; death, 379.

Fortifications.—Science of offensive and defensive warfare revolutionized by the present war, 379; calibre of guns, 379; rifled guns, 379; bombardment of Sumter at long distances, 379; sand-works at Fort Wagner, 379; comparative powers of resistance of earthworks and masonry, 380; revolving iron turrets, 380; methods of giving and receiving battle, 380; barricades, 380; temporary fortifications, 380; stationary torpedoes, 380; uses for harbor defence, 380.

FOSTER, STEPHEN C.—Birth, 380; written songs, 380; death, 380.

FOX, WILLIAM J.—Birth, 381; pursuits, 381; death, 381.

France.—Emperor, 381; French Constitution, 381; area and population, 382; countries under the protectorate of, 382; loans, 382; debt, 382; army, 382; navy, 382; iron-clads, 382; commerce, 382; Legislation, 382; address to the Emperor, 382; his reply, 382; attempt upon

the Emperor's life, 384; elections, 384; public affairs, 384; reforms in the postal department, 385; comparative commerce, 385; most important events in foreign relations, 385; with the United States, 385; insurrection in Oran, 385, 386; Cochín China, 386.

FRANCIS, JOHN B.—Birth, 386; pursuits, 386; death, 386.

Freedmen of the South.—Numbers, 387; management and provision for them, 387; failure of the compensated labor systems, 387; home colonies, 388; how organized, 388; Freedmen in Savannah, 388; aid societies, commissions, and associations, 388.

Freedom of the Press.—Suppression of two New York papers, 389; explanation of the editors, 389; the spurious proclamation, 389; seizure of the telegraph offices, 389; disowned by the State Department, 390; letter of Governor Seymour to the District Attorney of New York, 390; action of the Grand Jury, 391; further instructions of the Governor, 391; arrest of General Dix and others, 391; argument before the City Judge, 391, 392; appeal of defendants to the act of Congress, 392; incidents connected with the publication of other newspapers, 392, 394.

FRY, WILLIAM H.—Birth, 394; pursuits, 394; death, 394.

G

GARFIELD, JAMES A.—Member of Congress from Ohio, 219; replies to Alexander Long, 341.

Geographical Explorations and Discoveries.—British America, 394; survey of Vancouver's Island, 394; survey of California, 395; Mexico, 395; experiments on the saltness of the ocean, 395; routes proposed for inter-oceanic canals, 396; exploration of the Orinoco, 396; provinces of Loreto, 396; height of Bolivian Andes, 396; explorations in Brazil, 397; Argentine Confederation, 397; passes of the Andes, 397; Chile, 399; physical and statistical charts of Austria, 398; geography of Switzerland, 398; surveys of Great Britain, 399; Russia, 399; Palatine Hill at Rome, 399; Dead Sea, 399; River Jordan, 399; States of Arabia, 400; explorations in Bokhara, Khiva, and Herat, 401; River Irish, 402; Eastern Siberia, 402; Amoor River, 402; China, 402; Formosa, 402; Oceanica, 402; New Zealand, 402; South Africa, 402; Upper Nubia, 404; Abyssinia, 404; Niger River, 404.

Georgia.—Peace resolutions before the Legislature, 200; disaffection, 405; message of the Governor opposed to conscription, 405; invitation of General Sherman to the Governor for a conference, 405; reply of Mr. Stephens, 405; do. of Governor Brown, 406; views of the Governor on the manner of settling the difficulties, 407.

GERARD, JULES.—Birth, 407; adventures, 407; death, 407.

GIDDINGS, JOSHUA R.—Birth, 407; resolutions offered in Congress, 408; career, 408; death, 408.

GRANT, General ULYSSES S.—Congratulatory address to his troops at Chattanooga, 41; appointed Lieut.-General, 37; reply to the President's address, 37; order on assuming command, 37; letter on the state of affairs, 134; order relative to deserters, 135; letter on the draft, 135; report of the Hatcher's Run affair, 136; commencement of his career, 422; reply to President Lincoln's letter on the campaign, 779; letter to General Lee, 779.

GRATTAN, THOMAS C.—Birth, 408; career, 408; death, 408.

Great Britain.—Area, 409; population, 409; Government, 409; proceedings relative to Laird's Rams, 409; motion in the House of Commons relative to neutrality laws, 409; contributions to Confederate prisoners, 410; letter of Secretary Seward, 410; bursting of Bradfield Reser-

- voir, 410; riot at Belfast, 411; explosion at Plumstead Marshes, 411; statistics, 411.
- Greece*.—Terms of agreement of the three great powers, 412; revenue, 412; National Assembly, 412; Ionian Islands, 412.
- Greek Church*.—Changes, 412; Union movement relative to, 412; church books sent to Moscow, 414; missions in Asia, 415; other missions, 415.
- GRIDLEY, PHILIP.—Birth, 416; pursuits, 416; death, 416.
- GRICE, JOHN.—Birth, 416; career, 416; death, 416.
- GRIMES, JAMES W.—Senator from Iowa, 219; on the emancipation of the wife and children of colored soldiers, 268; on the commutation of the enrolment act, 323, 324; on procuring substitutes with commutation money, 326.
- GRINFIELD, E. W.—Birth, 416; pursuits, 417; death, 417.
- GRINWELL, J. B.—Member of Congress from Iowa, 219; offers a resolution relative to the suppression of certain newspapers, 321.
- Gun-Cotton*.—Is gun-cotton stronger than gunpowder? 417; is gun-cotton more convenient than gunpowder? 417; is it cheaper? 418; mechanical applications of gun-cotton, 418; first form for use, 419; second form, 419; third form, 419; fourth discovery of General Lenk, 419; fifth principle, 420; how to make it destructive, 420; nature and source of the amazing power of gun-cotton, 420.

H

- Habeas Corpus*.—Modifications of the President's proclamation, 421; difference between courts-martial and military commissions, 421; persons brought before military commissions, 421; trial of Provost Marshal Fish at Baltimore, 421; arrest of editors, 421; case of E. N. Fuller, 422; do. of O. C. Cone, 422; do. of W. H. Simpson, 422; do. of John Mullaly, 422; do. of Dr. John McElwee, 422; do. of Mr. Flanagan, 422; do. of J. J. Bingham, 422; numbers arrested, 422; case of Colonel North, 422; do. of J. A. Creed, 422; arrests in Kentucky, 422; arrest of Congressman Hall, 422; report of a Committee of Congress, 422; suit of William Buckley against U. S. Marshal Robert Murray in New York, 422; action of the court, 424; case of United States vs. Colonel Baker, 424; arrest of DeBow by the Government at Richmond, 424.
- HADLEY, HENRY H.—Birth, 425; educational pursuits, 425; death, 425.
- HALL, JOHN P.—Senator from New Hampshire, 219; on negro votes in Montana, 287, 289, 240; on amending the Constitution, 260; on confiscation, 292.
